Bloomington North advanced chemistry teacher Neil Rapp, WB9VPG will join the students as they travel to the Kennedy Space Center for the April 4th launch of the Atlantis space shuttle. Once the experiment is aboard the International Space Station, it will thaw and allow the crystals to grow. After the crystals are formed, they will be transported back to earth and studied by NASA, and eventually returned to the Bloomington High schools.

According to Neil Rapp, the formation of protein crystals is an important step in the development of drugs designed to cure various diseases.

Reporting for Amateur News Weekly, this is Jack Parker W8ISH.

--

All eleven chemistry students will be on hand for the launch of Atlantis. Each will receive a plaque and shirts designed to commemorate the launch of their experiment into space. (WB9VPG)

**

ARRL TO FCC: TIME TO RE-EVALUATE THE NOVICE BANDS

The ARRL has asked the FCC to eliminate the 80, 40 and 15-meter Novice and Technician Plus Morse code subbands. It also wants the FCC to reuse that spectrum, in part, to expand the radiotelephone allocations on 80 and 40 meters. Amateur Radio Newsline's Bruce Tennant, K6PZW has the details:

--

According to the ARRL Letter, a Petition for Rule Making filed March 22nd, the League requests that the FCC revise its Amateur Service rules in accordance

with the modified Novice band refarming scheme the ARRL Board of Directors okayed in January. The Petition has not yet been put on public notice for comment.

Refarming is a government-ese term coined a few years back. Its a way of saying that spectrum assigned to a given radio service will be reassigned for other uses within that service. In this case, reassigning spectrum now primerally dedicated to Novice C-W operation to various other modes.

If the FCC approves the plan, current Novice and Technician Plus licensees would be permitted to operate on the 80, 40, 15 and 10-meter General-class Morse code allocations at up to 200 watts output.

The ARRL's petition also asks the FCC to permit amateurs to use spread spectrum on the 222 to 225 MHz band. It also requests an expand the pool of special event call signs beyond the 1 by 1 format to include identifiers for US territories and possessions that do not provide for mailing addresses. And it asks the FCC to clarify its rules to indicate that modulated CW is permitted for repeater station identification.

For the Amateur Radio Newsline, I’m I’m Bruce Tennant, K6PZW.

--

In its petition, the ARRL cited substantial advancements in the use of “digital techniques” in the HF bands such as PSK31 to bolster its assertion that a refarming plan is needed. The ARRL says that the Novice High Frequency sub-bands are underutilized and Amateur Radio cannot wait any longer on this issue. A copy of the ARRL's complete Petition for Rulemaking is available on the ARRL Web at www.arrl.org. (ARRL)

A NEWSLINE FOLLOW-UP: A POLITICALLY DISORGANIZED 11 METER CLASS D SERVICE

A few weeks ago we reported that the FCC has refused to hear an appeal by an Illinois C-B operator convicted of Disorderly Conduct for interfering with a neighbors home entertainment electronics. In the days since that report first aired, it caused quite a stir on several Internet discussion groups. Everyone wants to know how a service that once boasted 3 out of every 5 Americans with radios in their cars could wind up where the local sheriff or policeman could take an operator off the air.

After a bit of research, the answer seemed pretty clear. In one word: Politics. Here is Amateur Radio Newsline’s South East Bureau Chief David

Black, KB4KCH, with part 1 of a multi part look at the strange political side of 11 meter C-B.

--

When it comes to having political representation, most communication groups are in good shape. Hams have the American Radio Relay League looking after their political well being. Broadcasters have the powerful National Association of Broadcasters. Cellular telephone companies have the CTIA. Even the General Mobile Radio Service, which shares frequencies with the Family Radio Service, has representation amid the Personal Radio Steering Group. So, what form of communications lacks representation? That would be 11 meter, Class D Citizens Band radio. What does CB have? This:

--
Sound from 11 meter CB
--

Give CB a listen, and you hear lots of people using a service without any structure or formalized representation. Some might even call it anarchy.

--
More sound from 11 meters
--

Ironically, CB's lack of political power--as well as its inability to defend against bureaucratic attack--is not due to shortage of people using the airwaves. Many believe that next to cellular telephones, the second largest selling piece of 2-way radio equipment in the 20th century has been the CB radio.

During the gas crisis in the 1970s, many cars sported some sort of 11 meter whip and a cheap CB radio under the dash. Low cost 11 meter radios by the millions were manufactured, imported and sold. The industry had hobby magazines and several newspaper style newsletters devoted to CB radio.

CB operators outnumbered hams by at least 20 to one. And they outnumber GMRS users by 1000 to one.

But CB was not able to defend itself from outside pressures either back then or today. Why? Part of the reason goes back to CB’ers themselves in the 1970s and early 1980s. Most of them were not really interested in the service. It was just a utility. A way to help learn where to find the cheapest gasoline or avoid speed traps.

The CB radio service lacked any real monetary commitment. Without that, there was no political commitment. And when fuel prices began to ease, many but not all 11 meter operators pulled their radios out of their cars--and put them in the attic.

Then there were the few others, the die hard CB hobbyists. They treated CB channels 1 through 40 as a sort of ham radio-like hobby. Some operated illegally, but would take the chance just to make a DX contact. But they never organized. Why?

Different CB groups formed over the years. Many called themselves political messiahs of 11 meters. But many turned out to be bogus.

During the late 1970's and early 1980's, C-B radio scam artists were busy, trying to separate the 11 meter radio operator from his hard earned cash. As group after group appeared and then vanished, it became apparent to most using C-B that trusting anyone was too expensive. Now, more than 25 years later, trust in any C-B political organization seems little more than a remote possibility.

And what about the legal C-B operators? Those dedicated to public service? That part of the story, next week.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

Next week David tells us about the only successful C-B organization and the reason that it survived when the rest went away. (ARNewsline(tm))

**

SHORTWAVE: ARNEWSLINE VISITS AN SWL-FEST

>From C-B to shortwave listening. Ham radio operators are not the only radio hobbyists who hold conventions. So do Short Wave Listeners and one of the most successful gatherings is Winterfest. Amateur Radio Newsline’s Steve Coletti took his tape recorder and visited this years gathering. He has this report:

--
AUDIO ONLY - NO TEXT. Download MP3 audio at www.arnewsline.org by clicking on the newscast number.
--

It may not be the size of the Dayton Hamvention or Huntsville Hamfest, but to Short Wave Listeners, Winterfest is truly the best. (ARNewsline(tm))

**

RADIO GROUPS: NEW MURS USERS GROUP FORMING IN CYBERSPACE

We have covered C-B and short wave listening. How about MURS -- the newly created Multi-Use-Radio Service. Well, according to an Internet posting, an organization called The MURS OPEN Group has begun work to form an Internet-based MURS User's Group. This group will be a non-profit corporation whose main goal will be to encourage the growth of Multi-Use Radio Service. If you are interested in learning more, you can visit the group in cyberspace at: http://groups.yahoo.com/group/MURS-OPEN/ (MURS Open Group)

**

CONVENTIONS: WELCOME TO HAM RADIO AT NAB

If you are planning a trip to the upcoming National Association of Broadcasters convention, be advised that the hams of Las Vegas are expecting you. Bill Croghan, WB0KSW, says that the Las Vegas Radio Amateur Club repeaters are up,

active and hard linked.

Bill Croghan is the Chief Engineer of Lotus Broadcasting in Las Vegas. He says that on two meters try 146.94, minus 600 kHz offset with a 100 Hz access tone. This machine is now located on the Hilton hotel immediately above the Convention center, but on the opposite tower. From this site it should be useable from deep inside the Convention center and easily from anywhere on the Las Vegas strip.

If you would rather use a U-H-F machine try 448.500, minus MHz offset also with a 100 Hz access tone. This system is hard linked to the 2 meter machine but located on the old Tropicana hotel site as in years past. With the two systems linked any ham attending N-A-B with either a 2 meter or 70 centimeter radio can have fun and stay in touch. The convention takes place April 8th through the 11th at the Las Vegas Convention Center in Las Vegas, Nevada. (BEAN)

**

CONVENTIONS: WELCOME TO THE NAB HAM RADIO RECEPTION

Also, this years N-A-B Ham Radio Reception will take place Wednesday Evening, April 10th at 6 PM following the close of the exhibit hall. Location is the Hilton Convention Center in Ballroom B. The gathering is being co-sponsored by C-Q Magazine and Kenwood Communications. C-Q Publisher Dick Ross, K2MGA and Editor Rich Moseson, W2VU, along with Kenwood’s Paul Middelton, K4NUH, will be there as your host.

Amateur Radio Newsline will also be loitering around the convention and the Ham Radio Reception. We will be represented by Producer Bill Pasternak WA6ITF and by Todd Hitzeroth, N6ZXJ, who serves on the Young Ham of the Year Award committee. (CQ, ARNewsline(tm))

This is ham radio news for todays radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EMERGING TECHNOLOGY: KERMIT AND THE V-CHIP

Sesame Street’s Kermit the Frog has a new part-time job. According to news reports the little green guy will be put to work boosting the awareness of the television V-Chip.

The V-Chip is a mandatory internal accessory built into any T-V set larger than thirteen inches diagnal picture. The chip reads a digital code that contains a program's rating and can be programmed to block out television shows parents deem inappropriate for their kids.

Now the Hallmark Channel in conjunction with The Jim Henson Company, has donated the image of Kermit to the Federal Communications Commission for use in

an upcoming promotional campaign to bring attention to the availability of the V-Chip. A new brochure to be distributed to the public by the FCC, the Hallmark Channel and other interest groups, will feature Kermit sporting a "V" with his fingers and urging parents to monitor the programming their children watch. (Published news reports)

**

INTERNATIONAL - CANADA: VE7BFK IS NEW ARDF COORDINATOR

Gordon D. Young, VE7BFK has been appointed as the Radio Amateurs of Canada National A-R-D-F Coordinator. Young first became interested in A-R-D-F when the Friendship Amateur Radio Society hosted the 3rd Friendship Radio Games in Victoria British Columbia back in 1993. He has since attended A-R-D-F events in Russia, Japan and the United States. He replaces Perry Creighton, VA7PC who has held that appointment for several years. (RAC)

**

INTERNATIONAL - ISRAEL: 500TH NEWSLETTER ON THE AIR

>From Israel comes word that Mark Stern, 4Z4KX, recently celebrated the 500th edition of his ‘Newsletter on the Air’ for that nations Russian-speaking ham community. Stern, the former UP2OE, has been performing this service for the last 11 years every Saturday morning on 7.080 MHz.

Stern also seeks donations of used gear that he donates to newly arrived new-immigrant hams. As a result of his efforts many have gotten on the air in Israel in only a short time after their arrival in that nation.

And if all that were not enough for one ham, Stern is also the Israeli Award Manager and issues the awards and trophies for the Holyland and Israeli VHF-UHF Contests. (Hagal International)

**

DX

In D-X, hams are usually out looking for D-Xpeditions. Heres a twist. A future D-Xpedition is looking for you. Jeramy Boot, G4NJH, explains:

--

Have you always wanted to take part in a major D-Xpedition, but never known how to get on an expedition team? Now could be your chance. Ken Holdom, ZL4HU, the leader of 'The Kermadec DX Association's' planned operation from the Chatham Islands - ZL7 - later this year, is looking for experienced SSB and CW operators to accompany the group. "As this will be a 24-hour-per-day operation, we are looking for operators who feel they have the willingness and ability to operate during both day time and night time," Ken says. For further information please contact the Kermadec DX Association, PO Box 7, Clyde, Central Otago, New Zealand or e-mail to zl2hu@clear.net.nz.

--

Again, that e-mail address to apply is zl2hu@clear.net.nz (RSGB)

A D-Xpedition to San Felix became active on March 16th as X-R-Zero C. It was active for 14 days on all bands and modes. If you made contact, QSL via John Kennon, N7CQQ, P. O. Box 31553, Laughlin, Nevada 89028.

Lastly, N6DE and K6EP will be active from St. Croix through April 2nd. During the CQ World Wide S-S-B Contest, they will use the callsign WP2Z. QSL WP2Z contacts via KU9C, and non-contest QSO’s to each operator's home callsign address. (Various DX sources)

**

THAT FINAL ITEM: AN APRIL 1ST CB D-XPEDITION TO THE ISLE DU CONEY

Earlier in this week's newscast we reported that 11 meter C-B has no political clout. What it does have is a bunch of people who just want to have fun. Now, a group of them is planning what they call a People's Radio D-Xpedition from an exotic island location. Roving reporter Pierre Pullinmyleg is here with the details:

--
AUDIO ONLY - NO TEXT. Download MP3 audio at www.arnewsline.org
--

Hopefully, Pierre will be back a year from now to pull your leg once again. (The April Fools Day File)

I've been on newsgroups since before it was easy to get onto the
Internet. I can't recall any message that would have qualified as "too
powerful to be heard."

The power of a message usually resides in the mind of the writer.
Powerful, to me, would be a message that said there hadn't been a
killing in the Middle East in more than a year.

A message about a stunt that the vast majority of the population never
heard doesn't measure up. It certainly would have been too benign for
Barry (the Moderator) to have killed.

I've seen a few posts about digital radio and decided to go read about the Ibiquity digital radio system. I'm impressed with what I've read on their website, but I'm curious about what you all think their potential for success is?

Personally, I think anything that can allow AM stations to offer an improved audio product is a great thing. Since it can be done on existing frequencies while the regular analog broadcast continues, I think it has the potential to be a well advertised cool new product that many people will want.

Comments??

This discussion remains evidence-free. Perhaps Greg could post his original on unmoderated ARB, and Steve...who has already chimed in on Barry vs. Bill...could advise as to whether he nixed it or missed it.

Bill did indeed withhold posts that he thought went over the line from powerful to deliberately provocative. A rejection can force us to reexamine our decision to post, but there are so many unmoderated forums on Usenet that it remains the province of posters rather than gatekeepers.

Whether or not it improves the product is debatable. Whether or not
it can be done on AM while the regular analog broadcast continues
without causing destructive interference remains questionable. That
there is no demonstrable need for it seems obvious.

It appears to me to be little more than a way to line manufacturers'
pockets at little or no benefit to broadcaster or listener.

1119. Getting a show syndicated

Newsgroup: rec.radio.broadcasting
Date: 2002-03-31 23:03:26 UTC
From: HRT <HRT@noaspam.ma>
Message-ID: <uaf5du8bb47q15@corp.supernews.com>
Source record: 11431

I've been producing shows for the Internet for a couple of years (profitably, until the tech sector got hit) and I want to start a weekly half-hour comedy show with the goal of getting it on public radio. Since this is a whole new arena for me, I had a couple questions:

1. How many shows should I have finished before approaching a station or syndicator? (The show isn't based on topical events, so I can have as many in the can as I want beforehand.)

2. Is the best approach to try to get it picked up by a big market public radio station then work with that station to try to get syndicated nationally?

Also, do Hollywood agencies mean anything in public radio? I'm repped by one of the biggest, UTA, so I could use them to try and get my demo to the right people if it helps at all.

Thanks in advance. (And if anyone knows of any other web resources or forums where I could also ask these questions, please let me know.)

I follow pretty much the same policy that Bill did. Bill nailed me once
on a policy violation, where I was embroiled in an argument and I submitted
something that was more flamebait than useful debate material. (I do that
sometimes. ;)

In that particular case, he e-mailed me privately, and explained why he
wasn't going to post the message, and asked me to cool it. Which I did.

I don't withhold posts of any type without informing the poster - if I can.
Some people post with invalid return addresses, in which case I can't reply
via e-mail. But I've only really had one or two instances where I deemed
a post inappropriate. I flat-out refuse to not post submissions based on
politics or other content, EXCEPT if I consider the post to be incendiary -
and 99.9999% of the submissions I get are not. I could have probably
said something about the recent exchanges between Sabrina and others regarding
XM, but I chose not to as I prefer to err on the side of letting the
post through.

With that said, I post through Supernews. Supernews has really anal-retentive
Usenet spam filters. I consider this to be a good thing. If I didn't, I would
not have set up my ISP to outsource news to them. :) However, sometimes posts
do not get through. I don't see this happening often, and the server gurus
at Supernews have graciously opened up their filters for me because they know
I moderate a newsgroup... but the filters occasionally snag a post here and
there anyhow.

If you are not getting stuff posted, and I'm not telling you it's because
your post is flamebait, PLEASE let me know ASAP! As long as it's not flamebait,
and as long as it's more-or-less on-topic, you should see it posted.

If you flame someone, that is the ONLY criteria that might possibly prevent
your submission from being posted, as long as your post is on-topic.

Ibiquity and NSRC have recently said that AM IBOC is unsuitable for use
at night because of the mutual interference from/to distant stations on
the first-adjacent channels. IMO that pretty well kills AM IBOC in its
present form.

Hourly bombing reports are sponsorable?

There are only 15 thousand people on Vieques, and it is too far form the
Island to cover mainland PR.

1123. RRB Editorial Policies -- was Re: April Fool's Radio Pranks

Thanks Steve for that crucial info on your editorial policies. Just knowing that if a reasonable post doesn't show then it's probably a technical error, that you try to send a note on the rare editorial rejection of topical non-spam posts, and that you welcome followup...will go a long way toward upping the comfort level of all participants.

I'd also request you consider a formal crosspost policy. People don't always know what they're getting into when they include RRB in a crosspost. Someone in alt.radio.digital, for example, making what he thinks is a routine reply, may not know he's being subject to the RRB editorial process, and probably wouldn't consider it appropriate if he did know. Yet crosspost threads between ARB and other unmoderated boards are often pretty interesting, and we need the additional perspectives.

My suggestion, if there's a way: release those posts to the non-RRB world under the original header, if they're not spam. If they're RRB-worthy, put them on RRB under the rubric of "Crosspost Digest." That way RRB'rs can participate without bottlenecking other boards, and someone who carelessly or ignorantly crossposts RRB, then looks for the followups here, will know also to check the other boards for the original thread. Whether or not you elect to try this as moderator, do you have any objection if some of the rank-and-file here choose to give crossposts this separate yet respectful treatment?

Crossposting ARB and RRB is an especially bad practice, as the very purpose of ARB as chartered is as a system to bypass RRB's editorial policies and timetables. I hope everyone understands it's not dissing RRB to split those threads on followup.

Jerome

Not all of their audience thought it was hilarious.

> I'm not
> defending them....I found it to be beneath contempt...but it obviously works
> for them and their audience. They were certainly not expecting to be fired.
>

By making a statement "it obviously works for them and their audience" -- it is not
a defense, per se, but you are giving a justification for such behavior.

You can do that, but I think that even if the audience of that low-brow show
thought it was hilarious, that other issues - particularly those of public safety
and the disregard of sensitivity toward the friends, relatives, and neighbors of
Mayor Menino DOESN'T make it work for their community of license.

Well, wait a minute. They were on a rimshot station - but they are running as a
Boston rimshot, so I will say it doesn't work for their community of coverage.
By starting a hoax of that sort may get a few demented individuals laughing, but
it affects the community beyond that listening audience.

I know many in the industry scoff at "public interest, convenience, and
necessity", but it's still written into the law. I know, I know, it's all BS,
the FCC doesn't enforce it, yadayada....

I'm sure very few of Mayor Menino's relatives listened to that despicable,
digusting show, but they had to endure the effects of the hoax of the tragedy.

Just because their audience had a ho-ho over it doesn't validate it.

> A perfect example was what they did to Robert Clary

<snipped, because it was also disgusting, and need not be detailed or repromoted
by its mention. If someone else wants to pass it on and ho-ho, go ahead, I'm a
champion of the First Amendment myself.>

> But, it was a perfect example of what they do on a daily basis.

Sid,

I don't care what they do on a daily basis. There is no justification for it. Just because bad taste is popular doesn't mean that it's OK. Especially when it can hurt other people emotionally or physically. The Menino hoax was WRONG. It would probably be found to be illegal, but apparently there was no FCC action taken on it. There are laws in place that should be strictly enforced.

It is definitely illegal to call someone up on the telephone and say 'gee, I'm sorry your friend/neighbor/brother/sister is dead' in order to alarm them. Why shouldn't a commercial venture be punished for broadcasting it on a radio station?

And a station that is brought to bear on these matters should not just be fined, as they often view a fine as the routine cost of doing business. They are not unlike the multi-millionaire who owns a Porsche and insists on driving it while drunk at 60 MPH through a school zone. He pays his tickets on time and has a lawyer to help him beat the DUI raps. And they view the related costs as 'expenses' of owning a car like that and being an afficiando of wine, and not as punishments or admonitions.

Their fitness to own a radio license - a privilege granted by the American people through the FCC to operate a radio station on the public airwaves - should be brought under extreme scrutiny. If anyone knows if the FCC has taken any action against the rimshotters on this, I'd like to know. But not having heard if they have or not, I suspect they haven't.

The height of audacity occurred the day AFTER the hoax, where station management sought to capitalize on the hoax by having a pie-throwing contest at city hall plaza. The stunt can be blamed on the, uh, (I hate to use this word in this situation) 'talent'. The subsequent non-apologetic mode of the station management questions their ability to accept the responsibility of running a station. They just didn't get it.

Now, being a layman, and not in radio -- I know I'll get a few nasty responses in here. So, I guess the rec.radio.broadcasting crowd will disagree with me.

I really don't care. But I do know that there are other citizens, who have a stake in their own communities and regions -- who DO care. In fact, it is probably a good time to write my Congressional representatives and ask if something was done about this, and why not (if there was nothing done)?

>I don't care what they do on a daily basis. There is no justification for it.<

Your radio has a tuning control and an off switch. Use them.

>Just because bad taste is popular doesn't mean that it's OK. Especially when it can hurt other people emotionally or physically.<

Your radio has a tuning control and an off switch. Use them.

And....in case you haven't noticed, nothing in the laws and regulations guarantees that what comes out of the radio won't offend anyone.

>It would probably be found to be illegal, but apparently there was no FCC action taken on it. There are laws in place that should be strictly enforced.<

What laws are those? Exact quotes, please.

>It is definitely illegal to call someone up on the telephone and say 'gee, I'm sorry your friend/neighbor/brother/sister is dead' in order to alarm them.<

Again, quote the law....verbatim.

>The height of audacity occurred the day AFTER the hoax, where station management sought to capitalize on the hoax by having a pie-throwing contest at city hall plaza.<

Since I see no record of your ever being employed by the station, you quite simply don't know what you're talking about. The pie-throwing contest was already scheduled for the following day.

Obscenity has been defined in court and some stuff is not allowed to be said on the radio nor in general circulation newspapers, nor on TV.

Besides from Greg's posting on the matter (I know nothing). I'm only posting this because you seem to defend the indefensible, and so I'm posting in defense of Greg's post.

What this speech sounds like to me is Malicous speech not obscene speech. BTW it is illegel to yell "FIRE" in a crowded theater. This radio thing is no different.

How would you like it if someone "invented the Sep-11 tradegy" and come on the radio and said 20,000 people just died and the president died and we are now under marshall law. Stay in our homes and army will give you ration cards this evening etc..... ha ha just joking!

>I'm only posting this because you seem to defend the indefensible, and so I'm posting in defense of Greg's post.<

Greg's post evinces such a clear-cut misunderstanding of the radio business that I had no choice. I don't for a second defend what O&A did, and I clearly stated as much, but I understand why it was done.

>BTW it is illegel to yell "FIRE" in a crowded theater.<

You, OTOH, evince zero understanding of the First Amendment, or else you just repeat whatever falsehood happens to suit your fancy. Mr. Justice Holmes stated that FALSELY yelling "fire" in a crowded theater was not protected by the First Amendment, which was never meant to trump the common-sense notion of warning people of imminent danger.

>How would you like it if someone "invented the Sep-11 tradegy"...<

Hyperbole doesn't make your argument cogent or logical. Such a lie would certainly fall under the current "hoax" rule (47 CFR &#65533; 73.1216). O&A's stunt doesn't.

Channel 933 Doubles Up On Music

Clear Channel's KHTS-FM 93.3 in San Diego has made an special announcement on Monday at 5pm.

"We're doubling up on the music so from now on we'll be playing twice as much music as the other guys,"
says afternoon deejay Cha Cha of "Channel 933" as the handle of the station.

For about 20 minutes, the station played a different set of songs aimed at each speaker, even the bumper
spots were heard at different times. One bumper spot proudly said "Play one song at a time? Pansies!
We're giving you twice the amount of songs in the same amount of time."

After the sets on each speaker ended, Cha Cha took phone calls from listeners who said they couldn't understand
any of the songs that were played (were they using mono radios?) One thought it as OK in a low key mood.

After the commercial break, Cha Cha finally exposed the stunt as an April Fool's joke.

Has a radio station in your area (or yours) stunted an April Fool's joke Monday?

Broken record, Sid? Again....

My community does not have an on-off switch. Even if I shut it off (moot point -
I listened to that excrement for five minutes once, it was enough), they still
caused damage and harm to my community. I do not listen to it, but if a station
acts irresponsibly, my shutting it off will not mitigate the damage it causes.

> And....in case you haven't noticed, nothing in the laws and regulations
> guarantees that what comes out of the radio won't offend anyone.
>

Being offended is one thing. The issue is generating a hoax that has the
potential for harm, diversion of public safety resources, and inflicting
emotional distress upon people and a community. We already knew they were
offensive. They crossed the line with the hoax.

ahhh..... while the pie throwing contest may have been a stunt, I don't recall the Mayor of Boston agreeing to participate in it, and if the press reports at the time were accurate - he was invited in an effort to mitigate the public relations effect of the hoax AND possibly (as many mused) avoid the city filing a broadcast hoax complaint.

Cheers

A misunderstanding of the radio business? Are you kidding me? You're the one asking him to quote the specific laws against telling lies over the air and questioning the laws that protect the public trust aspect of broadcasting.

The fact is, the "public trust" aspect of broadcasting has been lost, in many ways, in favor of the errant "business model" concept, which is driving people away from the radio in droves.

You are the one who doesn't understand the First Amendment. Opie and Anthony have all the free speech rights in the world. What they are NOT entitled to is the use of the public airwaves to do so. It's the same reason you can't stand on my front lawn and yell obscenities and claim a First Amendment right to do so.

O&A broadcast over publicly owned airwaves. A broadcast license is a public trust, and entails a certain level of responsibility. That responsibility seems to be lost these days.

That oyu have the right to free speech is without question. That does not mean, however, that you're entitled to a free computer or printing press to exercise that right.

Did the Q&A stunt involve a lie?

--
An unjust king asked a devotee what kind of worship is best? He replied:
'For thee the best is to sleep one half of the day so as not to injure the
people for a while.'

I saw a tyrant sleeping half the day.
I said: 'This confusion, if sleep removes it, so much the better;
But he whose sleep is better than his wakefulness
Is better dead than leading such a bad life.'

You're right --- I have a clear-cut misunderstanding of the radio business. I
think broadcast hoaxes are wrong, and from what I've read,
illegal. In any event. it should be wrong.

>

And even if technicalities under the law didn't make it, it doesn't make *YOUR* argument cogent or logical.

What was done by O&A was not just offensive, it was reprehensible and irresponsible, and the fitness of the licensee should be questioned.

The fact that I am not working in radio does not disqualify me from calling these actions as such, and it doesn't make me any less qualified to say it was irresponsible.

I can't drive an 18-wheel truck, but I can certainly say that if someone is driving one under the influence and causes an accident, it's an irresponsible action.

Likewise, if someone announces "the Mayor's dead" on a radio station, I don't have to work in radio to say "what these bozos did in my region was an irresponsible act."

So yes, Sid, I can turn off the radio. Believe me, as I said, I never listened to that trash anyway, and it does belong in New York, not Worcester or Framingham or wherever the rimshot was located. But I did see people in Boston undergo emotional distress.

Perhaps the FCC should strengthen the current "hoax" rules if in fact, this didn't fall under those rules, so it doesn't happen again.

Broken record, Sid? Again....

My community does not have an on-off switch. Even if I shut it off (moot point - I listened to that excrement for five minutes once, it was enough), they still caused damage and harm to my community. I do not listen to it, but if a station acts irresponsibly, my shutting it off will not mitigate the damage it causes.

> And....in case you haven't noticed, nothing in the laws and regulations
> guarantees that what comes out of the radio won't offend anyone.
>

Being offended is one thing. The issue is generating a hoax that has the potential for harm, diversion of public safety resources, and inflicting emotional distress upon people and a community. We already knew they were offensive. They crossed the line with the hoax.

>

ahhh..... while the pie throwing contest may have been a stunt, I don't recall the Mayor of Boston agreeing to participate in it, and if the press reports at the time were accurate - he was invited in an effort to mitigate the public relations effect of the hoax AND possibly (as many mused) avoid the city filing a broadcast hoax complaint.

Cheers

Whatever happened to the concept that liberty entailed responsibility? We're not talking about something that was TRUE and hurt someoen. We're talking about soimethng that was UNtrue and hurt soemone.

And what about the concept of the airwaves as a public trust? If O&A want to say anything they want, fine. But they are NOT entitled to use the public airwaves as a forum, any more than you or I are.

I remember a kidnaping hoax on a station in Tucson, AZ in the '70s. KIKX didn't lose its license because the government is against free speech. They lost their license because they violated the public trust. That concept seems to have gone by the wayside these days, and it's among the things that serve to make the radio airwaves useless these days.

In this year's edition of stupid, tasteless radio pranks, WFNX Lynn MA has gotten some people upset. Not as much as WAAF Worcester's "Boston Mayor Menino is dead" Opie and Anthony debacle, but stupid nonetheless.

<http://www.boston.com/dailyglobe2/092/metro/Not_all_amused_by_WFNX_joke_on_Bulger+.shtml>

I don't get it. Didn't people used to use real humor on the radio instead of waste our time with this stuff?

Exactly. I want him to quote me which laws would have applied. He can't, because there are none.

>Opie and Anthony have all the free speech rights in the world. What they are NOT entitled to is the use of the public airwaves to do so.<

I suggest you try actually reading the law before making such an erroneous statement....specifically, Section 326 of the Communications Act, which prohibits the FCC from engaging in censorship.

>crepted up and bit them on the butt.

There is a marked difference between Dumb and Dumber, also known as Opie
and Anthony, and their colleague Howard Stern.

Howard panders, sure. But the fact is, like him or not, he isn't a moron.
In fact, both he and partner Robin Quivers are intelligent people. And if
they wanted to do a show with serious interviews, they could do so, and
could do so successfully. They have the talent and the wherewithal to do it,
but that's not their shtick, and it's not what their audience expects.

And although he goes for the lowest common denominator, Stern can be funny
without doing so - I've heard him do it!

On the other hand, I hear nothing from Dopey and Crappy that I couldn't get
from listening in to a conversation between two drunks at a bar.

Perhaps that's why they don't have national sponsorships. A local station
runs Dopey and Crappy, and they basically just play the feed from WNEW and
occasionally insert a commercial over it, with the result sounding like hell...
(Sorry, say what you want about "Cheap" Channel, but I've never seen them
pull a stunt like this; if they are going to syndicate someone, they do it
the right way.)

Stern and Quivers do have talent. Dopey and Crappy have none. Aside from the
fact that they work at Infinity stations in New York and are syndicated by
Infinity, they have nothing in common.

I listen to Stern from time to time. I refuse to listen to Dopey and Crappy.

Hello all,
I need some information regarding carrier recovery at 1.5GHz. What I am trying to do is to demodulate BPSK signal at 1.5GHz. The recovery of the signal is complicated by the fact that such high frequencies the phases of the local oscillator at the transmitting end is far from ideal and hence demodulation is rather difficult. Does anyone have any suggestions/ideas/solution for this problem. Thanx in advance.

Vikrant

NAB is not a significant campaign contributor and would be, in any case,
only slightly affected by any campaign spending bill. Most of the lobbying
strength of the NAB comes form the power of the press, not the power of the
dollar.

In general, "cleaning up" usually progresses to "book burnings" and the
whole thought police thing. Fortunately, that kind of cleaning is not
constitutional in the USA.

Generally, public figures are subject to criticism, ridicule, commentary and
such without fear of prosecution under libel/slander laws. SOme people do go
to far, and there should be a way for the management at each station to keep
people within bounds. But my bounds may not be yours, which is why the
Consititution guarantees such extensive freedom of expression.

Actually, the host of any show is using the airwave as a forum for thier
view of comedy, commentary or whatever. Rush Limbaugh certainly uses the
airwaves as his forum...

The hoax at the 580 station in Tucson was a rigged contest. That is entirely
different form a case of bad judgment in entertainment values. A rigged
contest is and has been a revocation offense for decades. The Tucson thing,
involving a "missing jock" who could be found for money prizes, was totally
rigged.

I don't know why you continue to call the station a rimshot. It does noting to validate your argument, especially since that statement is not true.

A rimshot is generally agreed to be a station either outside the MSA (Metropolitan Statistical Area) that is trying to penetrate the metro (Like the Manchester, NH, TV that did so in the 60's) or, sometimes, a station on the very edge of the metro. Framingham and Woster are way inside the Boston MSA, and the stations I see licensed there are definitely not rimshots. WAAF in Worcester has been a significant Boston player for decades, in fact. Same for WROR in Framingham; both are in the Top 10 billers in the market.

PLease try to do a reality check. Whether the spectrum is regulated by the government or not, once a license is granted, the licenses has fairly broad powers to produce programming that it feels will appeal to listeners.

Just because you don't like the program does not mean that there has been a violation of public trust.

It's not a Boston station, it's a WORCESTER station attempting to operate as a Boston station.
Look at your geography book. Worcester, Lowell, Framingham, etc. are considerable distances from Boston, even though some "marketing" book says "oh this is Boston".

Maybe it IS technically legal - I will let the lawyers figure that out.

When you're talking public trust, responsibility, and FITNESS - different matter, Sid.

And you're "I'm not defending them, but" looks like a defense to me, sir.

The 1938 War of the Worlds broadcast was scheduled, listed and
announced as a play. If people had listened, they would have known it
was a play and not real. Unlike the "pranksters" of today's shock
radio, Orson Welles was responsible both during and after the
broadcast.

A. Find how much NAB contributed to campaigns. It is a small amount.
B. The O&A matter does not fit the legal definition of a hoax.

On "B" we may all dislike the content, but we defend the right to do it as
any effort to censor or limit that right will also thwart less mean-spirited
or stupid efforts at using parody or ridicule as a social commentary.

Well infortunately the "press" forced an loophole in the reform bill ;-(.
Still a step in the right direction however.

Usually........except there are always exception to the rule......this is
one of them!

Fortunately, that kind of cleaning is not
> constitutional in the USA.

$$$$$$$$ is not speech.

As for "thought police" when few control and filter the Media, how is this also not the same as "book burning"?? the result is the same...limit to freedoms, propaganda, control of the masses.

Framingham is 30 minutes west of Boston on the Masspike. I've been there;
have friends living in Southboro, just outside Framingham. It could be
considered a suburb, since Boston's a large city. IMHO Lowell and Worcester
are too far away to be considered suburbs and I'd be surprised if they are
counted in the MSA. On the other hand, Akron and Lorain are both counted
in Cleveland's MSA. On the OTHER other hand, they're both half an hour
from Cleveland. A Canton station broadcasting into Cleveland would be
considered a rimshot.

Northern California Coast AM Construction Permit For Sale. Covers Arcata/Eureka.
This is a full time non DA. Asking 125k but open to offers. Will sell as asset sale or sale of stock of nearly 3 year old corporation with no long term debts.
Email maximumradio@mailcity.com for details. Note: Sale is due to default by a buyer on our sale of another station. We orignally planned to be owner operators. This permit expires mid year 2004 but the timetable on the "default" facility mandates that we sell this and commit to a long term relationship with that facility. This area has colleges and a university. It could easily support a "hot talk" format. It is also just about the only area of California without Spanish radio.

As you invoke the First Amendment, please advise: does XM have a First Amendment right to localize its repeater content? If not then doesn't it follow that broadcasters have regulatory, rather than constitutional, privileges of free expression?

Really, truly, who cares where the station is licensed? Worcester is deep inside the Boston radio market, as defined by Arbitron, as accepted by major advertisers and the radio industry. Radio covers metropolitan areas, advertisers advertise to metros. Whatever the distinctions of the city limits of individual governmental and administrative districts may be, the fact remains that the Worcester and Framingham stations are very, very much "Boston" stations in terms of audience, billing and coverage.

If you don't believe this, go to the Census website or the OMB site and look at the definitionthe US Government uses for Boston. It includes:

(1123 Boston-Worcester-Lawrence-Lowell-Brockton, MA-NH NECMA)
1123 25 005 Bristol County, MA
1123 25 009 Essex County, MA
1123 25 017 Middlesex County, MA
1123 25 021 Norfolk County, MA
1123 25 023 Plymouth County, MA
1123 25 025 Suffolk County, MA
1123 25 027 Worcester County, MA
1123 33 011 Hillsborough County, NH
1123 33 015 Rockingham County, NH
1123 33 017 Strafford County, NH

This is "Boston" as far as Metro Areas are concerned.

When I was in the Military we had a saying - "You trim you win".
Half the battle when demodulating any BPSK signal is to decapsulate any
remaining strong-field signal before interspersion. This having been said,
once the distance has had it's carrier amplitude modulated, a BPSK signal
above the SK density ratio will occupy greater bandwidth. My supervisor
once proved this to me by slamming me in the head with a metal mop bucket
over and over till I passed out. Then we played "Hello broom handle".I was
made to clean up the whole mess before I went to sick bay. So I don't think
demodulating BPSK signal at 1.5GHz.is going to be easy.

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

There are a limited number of frequencies available for use in any given
market. The reason broadcasters are licensed is to encourage responsibility.

While I do agree that they do have broad "license" to program their stations
the way they would like, at the heart of it is the concept of a trust. There
are certain things they are not allowed to do, and a lot more that they
really shouldn't be allowed to do. While O&A have every right to make any
statement they want, they do not have an unlimited right to do it over the
public airwaves. If broadcasters can't demonstrate greater responsibility,
then perhaps we should hand off the licenses to people who will.

Framingham is well within the normal limits for a metropolitan area. I also
can't think of a single fm or am station in Framingham that wouldn't cover
Boston. It's also irrelevant that Worcester is 40 miles away from Boston, WAAF
is regularly heard in Boston and sells time there, so your distance argument
isn't really valid. If people listen or it sells time to advertisers within
the market, then it's part of the market. In this case, the station in
question does cover metro Boston.

Agreed. But since no one has an inherent right to use the public airwaves to say anything they'd like, why would the bar have to be that high? A station in DC was fined a week or so ago for broadcasting someone's answering machine recording without permission. If I played such a tape on the street, there would be little anyone could do about it. Why do you think the fine came about? Could it be the threshold of "public trust" is a little higher when broadcasting than otherwise?

While I find much of what Limbaugh says to be despicable in many ways, I
would defend his right to an opinion. AFAIK, Limbaugh has never announced
the death of a mayor that never happened.

No. The complaints the FCC acted on were based on the fact that the "stunt"
sounded like a kidnaping to many listeners. The license was pulled for the
faked kidnaping, not the "rigged contest".

In the "good old days", a station was supposed to serve its city of
license. WAAF always tried to market themselves as a Boston station,
even though their signal is marginal there.

> [Moderator's Note: shows how much I know; I thought WAAF *was* a Boston
> station.]

Their studios used to be in Worcester (Cocaine Realty Building
downtown), now they're in Boston.

Their transmitter is in Paxton, just northwest of Worcester, but will
be moving east of Worcester (Westborough, I think) soon.

They are also applying for a change of their city of license from
Worcester to Westborough.

WAAF panders to Boston at the expense of Worcester, but this is no
different than most other stations licensed to places close to major
cities. In turn, stations licensed to places near Worcester ignore
their city of license and pander to Worcester.

The phone call restrictions are based on privacy isssues, not on public
trust.
>

Actually, it does niether. It guarantees that the government will not
interfere with your right to free speech.

> While I find much of what Limbaugh says to be despicable in many ways, I
> would defend his right to an opinion. AFAIK, Limbaugh has never announced
> the death of a mayor that never happened.

Different kind of show. I'm confident that the mayor issue was intended to
be a spoof but was done without the competence and forethought that was
needed to make the bit funny rather thn alarmist. That is a talent issue.
Bad talent usually is self flusing or improves based on experience.

The fact was taht the jock, who was supposedly kidnapped and had to be found for a reward, was nowhere in the Tucson area. In fact, I think he was in New York state or something like that. That defines a rigged contest. In the course of investigating the station, they also found lots of other irregularieties and they finally got the licence revoked over a veritable laundry list of offenses that indicated lack of positive control by the licensee.

I watched from very close by the proceedings in regards to the faked "shooting" on air of a morning jock at WVJP (AM) in the 70's. The FCC admonished the station for the hoax, but did not revoke the license. They did not even fine them!

Bruce, you just got hooked by a troll. "Emilio" is a canadian troll
and script kiddy who got convicted of some hacking a couple years
back. I don't recall his real name but he uses that alias all over
the place. Just plonk it and ignore it. Maybe if we're lucky he
can get to be bubba's girl again.

hi,

is anyone running pg 2002 on win2000 pcs with shared db accross a tcp/ip net on another win2000 machine. if so, have you experienced problems?

we are seeing the powergold app work for a while then max the cpu on a pentium 4 and lock up the pc. any ideas would help.

thanks.

You're right. Whether to debate if a Worcester station is a "Boston" station or a "Boston" rimshot is completely irrelevant to this discussion.

It's still irresponsible behavior.

1193. Has KCRW (89.9, Santa Monica, CA) "lost it"???

Newsgroup: rec.radio.broadcasting

http://www.newtimesla.com/issues/2002-4-4/music.html/1/index.html

You wouldn't know it from the somnolent
blend of smooth, creamy, drum-machiney
grooves currently dominating their airwaves,
but Santa Monica College public radio station
KCRW has a rich legacy as a supporter of
independent rock music. For most of the last
decade, it was a reliable source of
adventurous programming from all points on
the musical spectrum; you were as likely to
hear Malkmus and Pollard as, say, Kruder &
Dorfmeister. But in the past few years, as
listener contributions have skyrocketed and
the station's influence in the mainstream
music industry has soared, KCRW seems to
have lost its nerve for nervy music. These
days, 89.9-FM often sounds like an upscale
KOST/103.5-FM -- an easy-listening
alternative for the cappuccino crowd.

He may be the world's richest man, but that didn't prevent Bill Gates from falling for an April Fool's Day joke by two Quebec radio comics pretending to be Canadian Prime Minister Jean Chretien.

Montreal French-language station CKMF-FM said on Wednesday that staffers Marc-Antoine Audet and Sebastien Trudel had a 10-minute telephone chat with Microsoft Corp. boss Gates on Monday, April 1. The broadcast was aired in their nightly show on Tuesday and repeated on Wednesday.

Oh, what they did was a "parody" and social commentary?

David, I've been reading this board for a couple of years now, and have read your comments.

I would have expected a better response than that from you.

1197. KRKO turns 82 this month

KRKO, AM-1380, in Everett, WA, turns 82 years old this month. I don't recall the exact date, but it was April 1920 that the station began its' long history serving listeners in this north-of-Seattle suburban city.

Incidently, where are all the alums of this station today. Dale Goode? Fred McFarland? Shirley Bartholomew? Ray Courtmatch?

As I said, it was a "stupid effort" which did not come across well. But I do
defend their right to try. They are apparently, though, not bright enough to
be trusted with a crayon.

What is irresponsible about it? The FCC no longer requires "local community service" to the extent that they once did, and seems to recognize that small political jurisdictions are fine for trash pickup, but that the best station is the one that serves its coverage area which is likely to have much more commonality than previously thought.

COL service comes from the days of Class IV AM staitons and much more limited coverage, all before the era of suburban sprawl. This uniquely US idea of prefering low power stations and "local service" was totally different from the model in most of the world.

As cities expanded and the concept of metro areas embarking not just many cities and towns but many counties, the whole local service construct became irrelvant.

Think of stations that truly serve the community over many years, such as KMOX or WSB or WCCO or even Mark Howell's marvelous station in Bakersfield. They do not serve just the COL but the entire metro without distinction. WHich is how it should be.

It is the peak of responsiblity to serve as many people as you can.

You were not clear. I took your "irresponsibility" to mean "no longer
serving the city of license." Read your post in context, and that is how it
seems.
>
>
> > The FCC no longer requires "local community
> > service" to the extent that they once did
>
> And that is the problem, sir.

By that, I meant "service the the oftne miniscule town where the licencee
coud get the technical facts to all support a license." No longer
significant in today's world.

> > COL service comes from the days of Class IV AM staitons and much more

Again, you posted in a manner that said notning about O&A and indicated that
it was irresponsible to serve a large area (Boston Metro) vs. a smaller
specific city in the metro. O&A had not been in the thread for about 5
iterations.
>

>
> Serve. Not damage. Serve. The two are mutually exclusive.

Whew. I guess you were really upset about the O&A thing... so much so that
you missed the fact that we were no longer discussing those guys and had
moved on to COL vs. service area matters.

I guess relative to Enron or something, yeah, I guess it's a small
amount, David considering the state of things - although to me this is
more than i make in a year (or ten):

(from http://opensecrets.org)

TV/Radio Stations:
2002 cycle: $1,599,866
2000 cycle: $6,842,727

Top Contributors (TV/Movies/Music industry):

2002: #5 National Assn of Broadcasters $339,066
2000: #8 National Assn of Broadcasters $819,850

We shall not count other brodacast-related corporate donations, just to
not completely ripe the facade off this argument.

I seriously doubt it would change anything. The powerful lobbies would still be powerful. Unless listeners form a lobby of their own there's no chance they'll have the same access as lobbyists do, with or without money.

When was the last time you visited your congressperson to express your views about the state of the industry. Have you even written a letter? I don't believe many people in power read this newsgroup, so the only value it has is to allow you to vent.

It may have a purging effect on you but doesn't to a damn thing to change anything.

>Vikrant

1.5GHz isn't that high, really. If the oscillator isn't some extremely cheap piece of crap, it shouldn't be that tough to demodulate BPSK from 1.5GHz. A Costas loop can still do the job of carrier recovery for BPSK. What is the symbol rate of the desired signal? The lower the symbol rate the harder the problem will be, but I would think that with a reasonable oscillator anything above about 32kbaud should be doable without too much trouble. Obviously, YMMV.

If, however, as you've hinted, the oscillator _is_ an extremely cheap piece of crap, there are a few options. Raising the symbol rate helps, since then the Costas loop bandwidth can be increased to span the bandwidth of the phase noise. If that's not possible, switching to differential detection or differentially coherent detection may help, although there are performance penalties associated with both (which may be preferrable to not being able to lock at all).

Hope that helps a little.

>I used to make that argument until I discovered that their antenna site is where many of the other Boston stations are.<

Uh, Rich...WAAF's transmitter site is on Big Asnebumskit Hill in Paxton, northwest of Worcester...and always has been. The only other FM up there is WSRS, on Little Asnebumskit Hill, about 1000 feet away from WAAF's site. WAAF does not have a site in either the Needham/Wellesley antenna farm or on the Pru or the Hancock.

Having said that, however, it covers all of metro Boston and then some, so the fact that it's a "Worcester station" is a distinction without a difference.

From: mnmaniac@aol.com
Message-ID: <ub0qhn2dlr6ae8@corp.supernews.com>
Source record: 11474

Was travelling this weekend and heard several apparently unlicensed stations.

Two in Jacksonville: the long-time Reggae station on 95.5, and a new operation on 106.1. This station was simply tracking Pink Floyd's "Pulse" CD, with no announcements of any kind. Range of both stations was impressive. 95.5 seemed strongest on the NW side of the city, and 106.1 seemed strongest in the SW quadrant.

In Gainesville, there is a new Alternative station on 87.9. Lotsa strange tunes not heard on commercial radio with occasional recorded "Gainesville" and "Gainesville's Alternative" drops between songs. Sounds like it was being run off a computer hard-drive. Range was impressive: I carried it all the way south into the next county on my car radio. No co-channel interference on 87.9, of course!

Down to Ocala (35 miles S. of Gainesville), I hear Spanish and Mexican music on 95.9. This station has been operating for over a year now. Signal is weak in Ocala proper, but gains strength rapidly as you drive south. Strongest on my radio near Belleview, Florida.

Here in Orlando, we're back to a dial full of unlicensed stations. The FCC was through here just a few months ago and shut 'em down...but they're baaaaack! Hard-core rap music on 93.9, more rap on 92.7, still more rap on 91.3, and what sounds like French Creole and Reggae on 93.5. 93.9 is a high-power operation which covers most of the Orlando metro area.

Anyone else heard any of these stations?
-Drew in Sunny Central Florida-

Doing a survey among those who will call a radio station is not going to be accurate in determining listenership. To determine listenership, you have to poll the entire universe and determine that, of the people listening to radio, the percentage listening to you.

Most stations do not use call-in listeners for any statistical purposes, not even music popularity.

1215. Demise of KPPC-AM/Pasadena, CA

Newsgroup: rec.radio.broadcasting
Date: 2002-04-07 20:21:11 UTC
From: jimhilliker@hotmail.com
Message-ID: <ub1ahnn3etn10f@corp.supernews.com>
Source record: 11477

I see that a year or so ago, there were some questions about what became of
KPPC-AM, on 1240 kHz., the little station that served Pasadena for only two days a week for many years.

The station went dark with the last broadcast in September 1996. The FCC deleted the license in July of 1997, at the request of the licensee.

KPPC had been a 50 watt station from Pasadena Presbyterian Church from December
25, 1924 until 1936.

In 1936, KPPC boosted power to 100 watts, and shared time with KFXM-San Bernardino on 1210 kilocycles.

KPPC moved to 1240 on the dial in March, the 29th of 1941. It later became a specified hours station, on the air only all day Sundays and Wednesday nights.

When KPPC was on the air, KGFJ-1230 in L.A. had to drop to 100 watts, the
San Berdoo station on 1240 dropped to 500 watts and 1260 in San Fernando had to use its night antenna directional pattern.

In 1985, KPPC was granted 250 watts power, but was mainly on the air only nights, from sunset to sunrise....The station was mostly on weeknights and Saturdays from sunset to 2 am the next morning...They also stayed on all day Sunday, still broadcasting the 11 am service from their first owner's church.

But, KGFJ and other stations no longer had to protect KPPC.

In 1995, I believe, KGFJ-1230 was sold and became KYPA-Your Personal Achievement station, and also bought KPPC and 1220-AM in Pomona, to change all to the same format, simulcasting...But the owners decided to sell KPPC, saying the station's low power didn't add to their coverage and they could get a better signal for 1230-KYPA by shutting down KPPC. So, KPPC's last daily broadcast was in April of 1996...KPPC was then only on the air Sundays from
11 am to noon, for the service of Pasdaena Presbyterian Church to be heard, just as was KPPC's origianal purpose when it went on the air in 1924!

But, the end came in September of 1996, still trying to find exact last day of broadacst, anybody know? Please contact me. After 71 years and 9 months on the air serving Pasadena, CA, KPPC/AM was off

the air for good.

A call change to KBLV for K-Believe was filed, but 1240 in Pasadena went dark in 1996 and was deleted by the FCC in July of 1997.

Hope that helps those who wondered what became of this little radio station with the long history of service in the Los Angeles area.

>>
In 1936, KPPC boosted power to 100 watts, and shared time with KFXM-San Bernardino on 1210 kilocycles.

KPPC moved to 1240 on the dial in March, the 29th of 1941. It later became a specified hours station, on the air only all day Sundays and Wednesday nights.
>>

All 1210s became 1240s, under NRBA.

KFXM later moved to 590.

Rich Wood quotes Paul Anderson <paul.r.anderson@compaq.com> 'n sez:

> >The 1938 War of the Worlds broadcast was scheduled, listed and
> >announced as a play. If people had listened, they would have known it
> >was a play and not real. Unlike the "pranksters" of today's shock
> >radio, Orson Welles was responsible both during and after the
> >broadcast.
>
> People did listen. Many of them tuned in after the disclaimer and
> mistook it for the real thing. It was done so well that only repeated
> disclaimers would have conveyed the message. That would have destroyed
> the play.
>
> It showed the power of radio.

...in fact, that was the point of the Dorothy Thompson newspaper column that began turning public opinion post-WOTW towards Welles -- if a silly story about Martians ripping up the Jersey countryside and gassing New York City created such a panic, just imagine what a national adversary could accomplish on an unsuspecting audience...

...however, of course, that was a Halloween prank, not an April Fool's Day, thus off the subject topic :-) ...

Source record: 11481

The History of American Broadcasting web site says that the license was issued in January 1923. It also mentions that the station claims 07/04/22 as the sign on date. It's very possible that they had verbal approval and actually signed on prior to the official issuance of the license.

If it's of any significance, I have a very old postcard from Tiny Town, CO. It is a photo of a broadcast station. The two self-supporting wooden lattice towers both have a sign on them that says "KFEL" and there is a small transmitter building located between them. They support a 4-wire hammock style antenna. The post card is marked "broadcasting station, Tiny Town, CO". I presume this was a model built in scale for the display at Tiny Town but I am not certain. Could it be the real thing?

I also have a 1970 QSL card from KIMN signed by Chief Engineer George Vogel. It was mailed to a listener who reported hearing the station in Mississippi.

And I have a copy of the Burnett video made during the last broadcast of KIMN on 950. Even that has an error on it. One label on the tape shows the last broadcast as 04/23/88 and the other shows it as 05/23/88!

If any of these items would be useful in your anniversary celebration please let me know. As a big KIMN fan and a long time collector of radio ephemera, I would love to be involved in any special anniversary events, station tours, etc. Please keep me in mind for that.

And Happy Anniversary!

Amateur Radio Newsline™ Report 1286 - April 5 2002

Amateur Radio Newsline report number 1286 with a release date of Friday, April 5th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australian radio regulators say no to I-LINK and the NCVEC says its time to revamp Element 2. These stories are first on Amateur Radio Newsline report number 1286 coming your way right now.

(Billboard Cart Here)

**

INTERNATIONAL: I-LINK NOT LEGAL IN AUSTRALIA

One of the very popular internet based linking protocols appears to be illegal to use in Australia. This as the Australian Communications Authority issues a finding against I-Link. Q-News Graham Kemp, VK4BB, has the background:

--
There are two competing systems being used in ham radio to link repeaters over the Internet. One is called I-LINK and the other is I-R-L-P.

I-R-L-P stands for the Internet Radio Linking Project. It was developed in Canada by Dave Cameron, VE7LTD. It's aim is to link ham radio systems separated by long distance over the Internet without the use of expensive eased lines or satellites. I-R-L-P uses Voice-Over-IP software to link radio sites around the world. But I-R-L-P uses its own custom interface board and software suite running on a Linux platform. And that's why many hams have opted for an alternative called I-LINK.

I-LINK does everything that I-R-L-P does in linking repeaters, but it does not require a computer running Linux or any proprietary hardware interface. The needed software is available to anyone. It runs on a P-C and anyone can have it in their computer. Even non-hams. And that is what seems to be bothering our regulatory body, the A-C-A. It says that the widespread and open availability of I-LINK could make it possible for non hams to get on the air.

Over the past few weeks, much comment has been made regarding the legality or otherwise of I-LINK here in Australia. To clarify the A-C-A position, let me quote in part from a letter by John Martin the Federal Technical Advisory Chairman.

"There should be no issue with I-LINK because the A-C-A has made it clear that it must be impossible for anyone to gain access to an amateur transmitter by any means other than on-air working one of the stations that is connected to the link. The only system which can comply with this is I-R-L-P."

This action by our A-C-A appears to not sitting well with I-LINK proponents in other nations. Some fear the decision here in V-K could bring similar action by other communications regulators in their parts of the world.

VK's National Society, the Wireless Institute of Australia's President Ernest Hocking VK1LK along with WIA/ACA Liaison team member Gilbert Hughes VK1GH met with the ACA Thursday 28 March to discuss the current situation.

--
Hocking: “In order to address this situation the ACA have agreed to develop an information paper in conjunction with the WIA ACA liaison team. This paper will aim to make clear the criteria under which Internet linking can take place. The paper will not endorse specific software or systems. Rather it will provide clear guidance on the conditions that need to be met for the operation of such linked systems to remain legal within the the Radio Communications Act.”
--

It was agreed that every effort would be made to develop the paperwithin a period of 4 - 6 weeks. WIA President VK1LK has called on the Ham population of VK to "ask for your patience over the next few weeks whilst this document is being developed".

>From Q-News Australia, I'm Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Articles describing I-LINK recently appeared in both CQ and QST Magazines. No matter. Basically the Australian Communications Authority has said IRLP is O-K but I-Link has to go. At least for now. (Q-News)

**

RADIO REGULATIONS: FCC PROPOSES TO STRENGTHEN RULES AGAINST REPETITIVE APPLICATIONS

The FCC has proposed changing its application rules for all wireless radio services--including the Amateur Radio Service--in an effort to expand the scope of its current ban on repetitious applications. Newsline’s Bruce Tennant, K6PZW, has more:

--
The ARRL Letter reports that an FCC Notice of Proposed Rule Making released March 20th seeks to modify section 1.937 of its rules. This, to prohibit the filing of all applications that are substantially similar to applications the agency denied or dismissed with prejudice within the previous 12 months.

The term “with prejudice” means a legal issue or court case that is dismissed for good reason and the plaintiff is barred from bringing another action on the same claim. And, if the FCC gets its way, WT Docket No. 02-87 will bring a rules change that might prohibit a handful of applications filed by new and renewing hams where a similar or identical application was denied in the past 12 months.

The FCC cites the pending license request by Herbert L. Schoenbohm, ex-KV4FZ, as an example of a repetitious application. Schoenbohm's amateur license renewal was finally denied in 2000, when the US Supreme Court refused to hear the case. His authority to operate as a radio amateur expired in January 2001.

Then, last April, Schoenbohm applied for a new Amateur Radio license and passed the General exam. The FCC has designated that application for hearing, to determine, in part, if Schoenbohm deserves to be a Commission licensee.

The FCC says that such cases consume significant resources to re-litigate. Especially since they involve identical issues and the same applicants very close in time.

What about routine issues like dismissed vanity applications? The FCC says that they would not be impacted in any way. For vanity license applications, the FCC now allows these applicants to correct the mistakes and file again. The FCC says that it will continue to do so if the proposed rule change is adopted.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW
--

Comments on WT Docket No. 02-87, are due 30 days from the publication of the proposed rule in the Federal Register. Reply comments will be due 45 days after publication. (ARRL)

HAMVENTION 2002 - THE CHAIRMAN SPEAKS OUT

The Dayton Hamvention is now just a bit more than a month away and its General Chairman, Jim Graver, KB8PSO, is speaking out. Actually he has been talking to RAIN Producer and 2002 Radio Amateur of the Year Hap Holly, KC9RP. One of the things he made public was who will be speaking at the Hamvention's grand awards banquet:

--
Graver: "It will be William Cross from the FCC and Paul Reid from FEMA, and they will be talking about emergency communications and preparedness in respect to Amateur Radio."
--

Want yo hear more? Well Holly has prepared an extended interviewww with Jim Graver. Part 1 is on line right now at www.rainreport.com. If you don't happen to have internet access, try calling 847-827-7246. (RAIN)

**

CONSUMER ALERT: TELEPHONE AREA CODE 809 IS COSTLY

If you get an e-mail, voicemail or page telling you to call a phone number with an 809 area code, beware. The CGC Communicator reports that chances are, it's a scam and your phone bill will be
astronomical. The FCC has already issued a public warning about calling this area code. Its on the web at www.fcc.gov/cib/consumerfacts/809.html (CGC Communicator, FCC)

**

COMMUNICATIONS BUSINESS: AOL REPORTEDLY COURTING LINUX

Linux users listen up. Your favorite operating system may finally be getting a shot at becoming a real competitor to Microsoft Windows as rumors surface that AOL Time Warner Inc. is negotiating to buy the Linux distributor Red Hat Inc.

The Washington Post reported in late January that such talks were underway. The deal could bolster AOL Time Warner against rival Microsoft as both companies design strategies for moving their services beyond the personal computer to mobile devices and such nascent services as interactive television. (Publised reports)

**

HAMFESTS: ST. JOHN LUTHERAN SCHOOL HAMFEST

Turning to the hamfest scene. The St. John Lutheran School Hamfest and Electronics Show is slated for Saturday, April 13th from 8 a.m. to 1 p.m. Location is in Garfield Heights Ohio. Garfield Heights is 10 minutes South East of Cleveland with the school at 11333 Granger Road. Admission is only one dollar. For more information please write by e-mail to ln4js@visn.net. (via E-Mail)

**

NAMES IN THE NEWS: KE4IQB NAME WITHDRAWN FOR DEPUTY NASA ADMINISTRATOR

NASA says the White House has withdrawn the nomination of Marine Corps Major General and former astronaut Charles F. Bolden, KE4IQB, to be the space agency's next Deputy Administrator. Bolden is currently Commanding General of the 3rd Marine Aircraft Wing, based in San Diego. According to the CQ website, the NASA announcement did not say why Bolden's nomination was withdrawn, but suggested that the Defense Department objected to losing him from an active military command during the war on terrorism. There was no immediate word on who would be named to the number two post at NASA instead of Bolden. (CQ)

**

NAMES IN THE NEWS: KB2GSD TO PITCH FOR FREE AIRTIME

Walter Cronkite, KB2GSD, will be the pitch man for a new campaign taking on broadcasters for not offering enough affordable or free airtime to federal candidates. This, even though the airwaves are owned by the American public.

The coalition sponsoring the Cronkite narrative said that its kicking off its grass-roots drive following passage of the landmark campaign finance reform legislation. This legislation spared broadcasters from having to offer deep discounts to federal candidates.

Under current federal law, broadcasters are required to give discounts to political candidates. However the actual rate can vary depending upon the time it is slated to air. (Publisged reports)

**

NAMES IN THE NEWS: W6TIA RETIRES FROM KFWB

Richard Rudman, W6TIA, the Chief Engineer of KFWB - AM in Los Angeles California is retiring following a truly illustrious thirty year career at the all-news station. Rudman, who is the National Chair of Congressional Emergency Alert System Advisory Committee is perhaps better known for his roles with the establishment and evolution of the E-A-S nationwide.

During Rudman's tenure heading up the engineering helm of KFWB, the region has been regularly challanged by major brush fires, power failures, earthquakes, riots, and more. Throughout all of this Rudman has kept KFWB on the air. A truly enviable record and one that W6TIA can be proud of.

And less we forget, W6TIA has agreeed to be a part of this years Newsline sponsored Ham Radio Town Meeting at the 2002 Dayton Hamvention. His topic will be the Emergency Alert System and introducing it to Amateur Radio. (CGC Communicator, ARNewsline(tm))

**

EMERGING TECHNOLOGY: SMART FENCES

Smart fences are possible. So say Pennsylvania State College researchers who are using acoustic technology to turn a simple chain-link fence into an intrusion detection system.

To make the system work, a single strand of galvanized steel wire, a system of springs and weights and some inexpensive ground sensors make the fence sensitive to intruders. Among parties interested in the technology are the U.S. military, airports and oil companies. (PSC News Release)

**

SPACE AND SCIENCE: REPLACEMENT TDRS IN TROUBLE

A NASA communications satellite launched into orbit on March 8th has developed a problem with its onboard supply of propellant. The trouble is delaying the Tracking and Data Relay Satellite-I from reaching its ultimate destination, a circular orbit about 22,300 miles above Earth's equator. The satellite's current egg-shaped orbit is 22,236 miles at its ap[ogee and about 4,970 miles at its perigee. The spacecraft's manufacturer, Boeing Satellite Systems, is hopeful that its engineers will ultimately be able to deliver the satellite into its proper orbit. If it can’t, the satellite could be declared a total loss. (Published news reports)

**

INTERNATIONAL - HOLLAND: NEW LATIN AMERICAN RADIO STATIONS CD

Dutch shortwave enthusiast Max van Arnhem has produced an audio Compact Disc featuring 371 wave files of Latin American and Caribbean radio stations. According to Media Network, most are off-air recordings as received in his home in The Netherlands, but there are also some recordings made on one of the five trips he made to Central America and the Caribbean between 1979 and 2001. You can find a review of the CD, and details of how to buy it at www.rnw.nl/realradio/booklist/html/lacd.html. (Media Network)

**

DX

In D-X, the Ducie Island DXpedition is being called a major success. The ifirst ever D-Xpedition to the newest DXCC entity came to an end March 26. The VP6DI team was on the air for just over nine days and loged over 39,000 contacts. VP6DI HF QSLs go via VE3HO, and 6-meter QSLs go to JA1BK.

And some good news for DXCC chasers. This as the ARRL announces that it will accept SSB contacts with P-5 slash 4L4FN in the Democratic Peoples Republic of Korea for DXCC credit. The operator of the station is Ed Giorgadze of the Republic of Georgia. He has been active from the capital city of Pyongyang since last November. Valid contacts from the beginning his P-5 operation last fall may be submitted for credit, effective immediately. (ARRL)

**

A NEWSLINE FOLLOW-UP: THE POLITICS OF 11 METERS - PART 2: “A NATIONAL RESOURCE CALLED REACT”

Last week we told you that there has only been one truly successful organization with any political ties to 11 meters. In Part 2 of his special report on the not so political side of 11 meter Class D CB, Amateur Radio Newsline’s David Black, KB4KCH, takes a look at REACT.

--

A long known name in CB radio is REACT, or Radio Emergency Associated Communications Teams. REACT's mission statement stresses public safety communications, assisting individuals, groups and government agencies.

The stated goal: To save lives, prevent injuries and give assistance wherever and whenever needed. The group promotes establishing a monitoring network of trained volunteer citizen-based communicators and using all means available to deliver their message. REACT, it seems, has succeeded on both counts.

The idea of using CB radio in an organized way for emergency communications was born in a mid-winter Chicago snowstorm. It happened after CB radio was used to summon assistance for a young family with a very sick child whose car was stuck on an expressway. That was in the winter of 1962 when CB was really still in its infancy.

Not long after, the groups founder, Henry B. "Pete" Kreer, convinced the Hallicrafters Company to sponsor the REACT program. The initial requirements for a Team was for three members who agreed to monitor 11 meters several hours a day for emergencies. There were no dues or other requirements except to comply with federal and state regulations.

By 1964, it was determined that there was a need for a National CB Emergency Channel. REACT National Headquarters asked all of its 800 teams to monitor channel 9 as a voluntary emergency channel. The scheme worked so well that in 1967, REACT led a movement to convince the FCC to designate channel 9 as the CB emergency channel. It was a major political success and many CB hobbyists began to look at REACT as a possible voice in Washington. But that was not to be.

In 1969, General Motors Research Labs assumed sponsorship of REACT. Also in 1969, Jerrold Reese -- a name that would become synonymous with the growth of REACT became its Managing Director. Founder Henry Kreer remained on with the title of Executive Director.

It was on April 24, 1973, that REACT and to a lesser degree 11 meter C-B probably got its greatest public exposure. That’s when NBC's Today Show televised an interview with Gerald Reese and Henry Kreer. Their interview dealing with the REACT program was aired on some 220 affiliated stations. It lead to over 500 inquiries.

In 1975, REACT broke from GM and started as an independent organization. Not long after, REACT International received not-for-profit status in the state of Illinois followed by federal tax exempt status.

REACT was on its own and less than a year later, it was represented at the first White House Conference on CB radio. And in the ensuing years it won many awards for promoting highway safety through its radio monitoring efforts.

But nothing last forever and the late 1970's brought declining use of 11 meter Class D CB. As the 80’a approached there were far more CB sets sitting on closet shelves than on the air. The C-B craze was dying and with it fewer people in the REACT program.

By the middle 1980’s REACT the only major organization with any ties at all to 11 meters. REACT had survived the CB shakeout probably because never claimed to be a savior or rallying point for 11 meter hobby operators. It’s self appointed task was assistance to the public. REACT was now national and chapterized and tax exempt. It also had broadened its horizons to include other bands and began using operators from other services including ham radio. C-B was now only a part of the REACT model.

In retrospect, one might say that REACT fought very hard for setting up an emergency communications monitoring system on 11 meters, but it was not a lobbiest for the rights of the 11 meter hobby radio operator. Instead, it always has lived to its mission statement and that’s probablly why it has survived and prospered for the last 40 years.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.

--

To learn more about REACT International or to find out if there is an active REACT team in your area, please write to REACT International, Inc. 5210 Auth Road, #403, Suitland, Maryland 20746. You can also go to their website at www.reactintl.org.

Meantine, one question remains: Will anyone ever be successful in totally organizing political potential of 11 meter C-B? That part of the story, next week. (ARNewsline(tm))

> What about station owners, managers, and other personnel? Do they
> know or care?

I have a jaded opinion and feel that the only thing listeners care about is what is coming out of the speakers now. In the case of news or news talks stations, they care, to some extent, about the dependability of being informed.Beyond that, radio is free and listeners value it based on what it costs.

As I said, I have a jaded opinion. Last year, I was invited to the 35th anniversary of FM broadcasting in Ecuador, including a special award ceremony in the Ecuadorian Senate (I really did not need another plaque or proclamation). When I realized that the only one who probably cared was me, I decided to save the airfare. Considering the average age in Ecuador is about 22, that means that less than 25% of the population would have been old enough to remember, and then most did not have an FM radio back then.

Same goes for AM stations in the US. WIFM - "What's in it for me?"

WJR promotes their upcoming 80th via their IDs by using some ancient recordings. I suspect that they also added the fake heterodyne whistles to them for "realism."

I wish it were that easy. Is radio a cess-pool of brainless garbage? Sure! In case you haven't noticed, people have been saying things like that ever since it got started. Why? Because it's tied to the entertainment industry and the things that pass for "entertainment" have been "sliding downhill" non-stop for most of our recorded history.

The reason you think differently is because you're looking at the past a bit too fondly. Remember, the only stuff from the past that survives to this day is the stuff worth saving. Not all writers of his era were of Shakespeare's abilities. Were it not for a certain historical drama, most classical music listeners would not have heard of Mozart's contemporary, Salieri (sp?). And although many fondly listen to radio serials of the likes of Amos 'N Andy and the Green Hornet, these were the exceptional highlights of the usual radio broadcast --not the rule.

So. Radio is a cesspool. It's also a very creative medium. There are interesting interviews on the radio. There are even the occasional drive-time music programs with creative program direction that doesn't suck. I haven't heard one recently, however.

My point is that Congress can not and should not be responsible for setting guidelines to regulate what is and isn't good programming.

If people are truly offended by some broadcast, call or write to the sponsors of the program. If they hear from enough people, they'll change their tune. If enough advertising pulls away from sponsoring a radio show, it will die very quickly. Just ask Doug "The Greaseman" Tracht (Yes, I know he's back on the air, but it's a small station). Unless faced with ridiculously bad publicity, radio stations don't care what they broadcast. They'll play the same tired old stuff over and over again, all day long, if that's what pays the bills.

I hate to disillusion you, but as my sig line points out, 50% of everything is below average. That means that half of everything you hear is "garbage." Yes, O&A are probably at the bottom 1% of tasteful programming. Someone has to be there. If it wasn't them, you'd complain about someone else's performance. This ain't Lake Woebegon (only half of the kids can be above average), so get over it.

Unfortunately, it was appreciated about as much then as now. The primary reason most people didn't know it was a play, is that the Mercury Theatre of the Air only garnered about 2% of the audience.

Most of the audience was listening to Edger Bergen and Charlie McCarthy on NBC, and tuned out when an opera singer performed.

WOTW was not only disclaimed at the beginning, but when the Martians totally destroyed the communications infrastructure of New York there wasn't anything else to do but first-person narration from Orson Welles, in the past tense, talking about how he roamed the countryside looking for signs of life.

Not exactly the kind of thing that CBS would do if we were truly under attack. But most of those who were panicked didn't hear the end either.

To me, that seems like a very small amount. If you have the data at hand,
how does it compare with one of the petroleum lobby groups? Or the electric
utility lobby?

Ooops... I figured out the page myself. Health Care industry spent $93
million in 2000. NAB pales by comparison.

And just to clarify, (commenting on an email reply)

I beleive that narrow casters SHOULD be non commercial,
if they wanted to make money then they should license a full power station.
PSA's and public announcements should have a role in any community level
broadcast....keeping tnings non-commercial ensures that the "corporate"
takeover of america WON'T be happening on the low power stations....

for low power stations it's not about making money, it's about making
friends.....and sharing music/opinions/information.....now sponsered shows
might be an option...but no commercials....I can't imagine anyone justifying
un measured ad rates....

It's almost certainly an "engine electrical" component.

I don't know the layout of a Ford Explorer engine, but if the alternator has its own belt, you can loosen the belt (to the point where the hubs spin freely) and the engine will still start and run as long as the battery holds out. The alternator light will be on, of course.

This takes the charge-side (alternator, regulator) out of the equation. Turn on the radio. If you still have noise when the alternator isn't running, it's probably ignition-side (coil, distributor, wires, plugs).

Remember to tighten the belt and charge the battery when you're through testing this.

>
> KFXM later moved to 590.

###

Yes, that's correct, I knew that much. I was just trying to simplify
things.
At first KPPC and KFXM had a share time agreement in the 1930s. That
meant that
KFXM would sign on for part of the morning, then go off trhe air.
KPPC would sign off for an hour or two, then sign off, then KFXM would
return to the air, then go off for KPPC to broadcast. This lasted
till about 10 or 11 pm sometimes.

In the 1930s, KPPC was on just about everyday at one time, especially
between 1929 and 1935. After that, KPPC cut back on its hours for
economic reasons during the Depression, since it was a non-profit
station. As for KPPC going on the air when KFXM was off the air on
1210 kc, KGFJ on 1200 did not have to power down, as they were also
100 watts at that time, the same as KPPC's power.
Yes, they both moved to 1240 in 1941, while KGFJ moved from 1200 to
1230.

This all changed in 1944, on June 13, 1944, when KPPC was given a
license for specified hours, to go on the air only on Sundays and
Wednesday nights. KFXM was allowed to stay on the air, but had to
reduce power and so did KGFJ.

Yes, in 1947, KFXM moved from 1240 on the dial to 590, and a new
station in San Bernardino was licensed to 1240, KRNO, with various
call letter changes over the years.

I need to take my 1998 Escort ZX-2 in for major repairs this month, and
will ask my mechanic about my interference problems some of which the same
as GT is describing. I mean, I get static on WTAM-1100. A 50-kilowatt
Cleveland station. DRIVING IN DOWNTOWN CLEVELAND!

My fiancee's 1993 Escort LX Wagon has some interference problems too.

I will report back here after having talked to my mechanic..

I disagree. I think LPFMers should be "non profit", but not non
commercial. They also have to buy, repair, and replace equipment and
they need the funding to do that.

BTW: all stations use un measured ad rates. Even Clear Channel cannot
tell anyone with any accuracy how many people are listening at any
given time. (Even David Eduardo said so in another thread.) Arbitron
is only a rough guess.

>Ok.....so the past had crap too.....yet not so much crap??

I'm not sure what you mean here. You have to understand that when a medium is new, the whole thing looks like a Cesspool at first. Take Jazz, for example. It started in places such as the bordellos of New Orleans. The very term "Jazz" was derogatory. Look at the internet today: It's still renown because of all the porn web sites.

Likewise, radio, when it first got started, looked like a colossal waste of time. Then something happened. Advertisers noticed it. Slowly, money started to flow. It got bigger. As it got bigger, some programming was found to work and some was found to be a complete flop. Technology changed too. Some features worked very nicely with newer technologies, while others fell flat. Eventually everything settled down in to a routine that even a relatively uncreative business manager could run, and that's how radio formats got popular.

Today, most folks have forgotten the sidelined efforts in the beginnings of radio. They have forgotten the stuff that didn't fit well with the technology of the era. Instead, everything has ossified to a statistically managed mediocrity.

The courage to try venture capital on a new radio station format is just not that common any more. Radio is mostly old hat. Nobody wants to risk large sums of money when the business has already been formatted and profit margins all but guaranteed.

>;-) so.................how do we make it better?

"We" (meaning our government) don't. You do. By turning off your radio and turning on other media. When the business models start falling apart the industry will be forced to try something new. Until then, they're making big money, they're hardly likely to want to change. And as far as Congress or the FCC is concerned, do you really want them to define what "good taste" is? I sure don't. If you think mediocrity is bad now, wait until interest groups in Congress get a hold of it...

>> My point is that Congress can not and should not be responsible for
>> setting guidelines to regulate what is and isn't good programming.

>These "guidelines" indeed limited the crap to a lower level, by serving the
>community with more local shows.After TeleCom96 the crap level increased
>(direct link).

I don't understand what the Telecommunications Act of 1996 has to do with this. We're talking about business models here, not government oversight. If a show makes money, it stays on the air. If it doesn't, it goes away.

And by the way, that goes for everyone --EVEN NPR, though they're reluctant to admit it.

>I've notice some of the smaller netwroks
>are a little better - but sadly most are religious and I'm not a Christian.
>But there quality is better than the crap the big boys dish out with all the
>hate-drivel-rant garbage.

The point is to get you listening. Whether it's conservative, liberal, religious, outrageous, or whatever, the point is to grab your attention. They don't care if they agree with you. They care if you're listening. That's what advertisers pay for. Why else would Art Bell be so popular?

>> so get over it.
>
>Yep - I just no longer listen.
>

>So........ your saying radio is crapola but thats ok because the taste of
>folks just gets lower and lower? Terrific. ;-(

It's not going lower. Your expectations are going up. There's a difference. When you're young, everything is a new experience --even the crap smells fresh. Ever listen to a popular tune from years back and wonder "What the hell was I thinking?" That's the sound of your expectations moving forward.

But never fear, you're doing the right thing. If you don't like it, turn it off. Get your news and music from another source. When enough people start turning off their radios in favor of other resources such as the Internet, advertisers will start throwing their money toward the Internet instead. It hasn't had much effect yet, but the Internet is still pretty new compared to radio. Look at the first ten years of broadcast radio and see how much of the advertising market they had...

I did not say that. I said that anything short of a census is a poll, and is thus an estimate based on statistics. On the kiind of significant player that gets the bulk of listening and ad revenue, the margins of error are only a few theths of a share point. In many cases, large national advertisers use 2-book and 4-book averages. They know that hte numbers are not precise, but they are more than adequate for the purpose of planning advertising, which is also an imprecise artform.

In other words, stations and advertisers knowingly use the extimates as fact because there is no affordable way to gat any more accurate. Ad rates are applied to various standards, including Cost Per Point and Cost Per Thousand and Reach and Frequency goals. Wile this is being done, the figures are regarded as absolutes.

Your "With any accuracy" statement is just wrong. Higher rated stations get shares that represetn lots of diaries and thus the accuracy is reasoably

close to reality. In many cases, the accuracy of overall 12+ numbers on higher rated stations is on the order of a few percent plus or minus.

Cost just as much for a LPFM'er to buy a control board, antenna, coax, microphone ect as the big boys. Tying their hands behind their backs, making it hard to pay their way will only doom the service from the get-go!

>
> BTW: all stations use un measured ad rates. Even Clear Channel cannot

Rough? Very Rough!! In markets of 2-million their still only sending out 800 - 1,000 surveys. I don't care what statistical forumula you use, they is very rough estimating. 1-teenager getting a book can speak for thousands of adults, thats very rough.

1242. looking for mic opinions

Newsgroup: rec.radio.broadcasting

Hi there.

I'm finally setting out on my own to do some freelance radio producing, and while I have an MD recorder that I'm planning on using, I've yet to procure a mic. I'm looking for one that won't be too terribly expensive, and will be good for all-around recording--both one-on-one interviews and background sound. (So uni v. stereo?)

If you have suggestions, I'd love to hear them. I also need to know what the price range will be, and where to buy (are there any good websites?).

Thanks in advance,
-Lauren

The point of the matter is, money buys influence, and just because something is less evil than something else doesn't make it okay or nothing to be concerned about. Although I do agree - it's the licenses that give them the true power.

I guess for a better representation, it might be good to add up the data on contributions given from the NAB and all other broadcast interests, which may add up to a more impressive total. I would settle for the $339,066, if that's all they could spare...

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their

own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM

Hi Scott! Love the stuff you've been doing on the L.A. tower sites,
and including some of the history.

For your information and for the other readers, that longwire was in
place only since late-1991. The longtime "T" antenna for KPPC-1240
was taken down in the fall of 1991 by the Star-News newspaper. The
towers holding the longwire said "Star-News" on each side...The towers
were first used by the Pasadena Star-News' radio station KPSN from
1925 until that station was shut down by the Federal Radio Commission
in 1931. The towers first said KPSN and Star News, but the KPSN came
down after that station went dark...At one time in the late-1920s,
KPPC and KPSN shared time on 950 kilocycles.

Anyway, after KPSN went off the air in 1931, KPPC was allowed to move
its longwire antenna from atop the church roof and use the old KPSN
antenna towers.
They built a new antenna system and ground system in 1936...It was a T
antenna with a 121 foot vertical lead that actually radiated the
signal, and the horizontal wire element acted as a capacitive load.
Ground system was installed under the tar paper on the roof.

Anyway, KPPC used that antenna till fall of 1991, and the Star News
cited damage from an earlier earthquake and other safety concerns, so
they took down the KPPC wire antenna and the historic Star News towers
that held the antenna in place.

The church then put up the wire antenna you show in your photo, used
until KPPC-1240 went dark in 1996.

NO! The reports are broken down by the demographics of the reporting people. One teen speaks for "N" teens, but not for any adults.

In a sense, that is why the 12+ ARBs are released publicly. They are worthless to the advertizers - who want more detailed demographic numbers.

I'd guess that celebrationg change of ownership might be more suitable.

One shouldn't wait for a full-year anniversary, however - that would be
too long :-((

They do not send out anything. They place diaries by a method that involves phone acceptance.

And a market like Phoenix or San Diego with about 2.5 million 12+ persons gets 3000+ in tab diaries every survey, 12000 a year.

Per peson value of a diary in that size market is about 900. In smaller markets, it is more like 400 to 500. In new yourk, with 14 thousand diaries, it is abbout 1200.

In statistical sampling. you can sample the whole country with 2000 interviews on certain issues with +/- 3% accuracy.

Try out Audio Technica ATM31a. I was very impressed with it. It costs
about 100 uk pounds.

It compares very well with the AKG C451 series

For sale:

Partial ownership of new AM CP for a nice area of
Northern California. 250 watts, fulltime,
non-directional on a class "C" (Formerly Class IV)
channel.

Wil serve important college city near the Pacific
ocean.

Active or inactive investors with at least $10,000
each are welcome. All investors will be on the board
with full voting rights if desired.

Please call (478) 741-1710 in Macon, GA or email.

73,

Meyer Gottesman, W6GIV

WAAF >does not have a site in either the Needham/Wellesley antenna farm or on the Pru >or the Hancock.
>
>Having said that, however, it covers all of metro Boston and then some, so the >fact that it's a "Worcester station" is a distinction without a difference.

I feel better now. My source was wrong and I was right. I was told they had moved it. I didn't have time to check my usual sources and accepted "it's where the other Boston stations are."

There have been so many changes in the Boston market since I worked there I assumed it was possible. The WSRS signal was one of he the giant signals in the business. I've listened to it from Albany to Marblehead.

I have to admit I respect WSRS more than WAAF. "Worcester's Stereo Radio Station" never seemed ashamed of where they were. WAAF was based on deception. A minor point, maybe, but it always rubbed me the wrong way. Maybe that's why I've always had so much respect for the Knight family.

Sounds interesting but a couple questions...
1)What's the market?
2)Why only 250 watts instead of the 1000 you can run on a graveyard channel (and just about need to, in order to get out even a few miles beyond your city of license at night)?

There is only one C.P. for a Class C station within the most northern counties in California.

A quick FCC license search will disclose all ... including the makeup of the existing board.

However, I previously posted that ownership information, so you could get that information with a Google search.

1263. Muzak SCA in NYC

Newsgroup: rec.radio.broadcasting
Date: 2002-04-11 12:54:36 UTC
From: qtraindash7@aol.com
Message-ID: <ubb1scgkht7la9@corp.supernews.com>
Source record: 11325

Most Muzak SCA's broadcast on 67Khz (environmental/instrumental) and 92Khz (foreground/adult contemporary). Those are supposed to be the same feeds on the satellite that is offered to business.
However, it seems the Muzak SCA on 101.9 in NYC is playing a loop tape on it's 92khz subcarrier (foreground). They are playing the same songs, same order every 3 hours. I have a radio that gets the 92Khz subcarriers and hear this stuff in my local Wendy's (which also gets a subcarrier).
This seems to happen at nights and for days at a time, ever since 9-11.
Just what is going on over there? It's been 7 months they should have fixed whatever the problem is by now.
Granted I'm not a paying subscriber, but if I was I'd be annoyed. You pay the $50 or so a month and you're not getting the same Foreground One that the satellite customers get, only the same songs every 3 hours.
Anybody have any ideas on what is wrong over there? Maybe I should contact Muzak but they have no comments if you're not a subscriber.
This is only occuring on 101.9 subcarrier in NYC, I checked 101.3 WKCI subcarrier out of New Haven it is playing off the satellite.
This is certainly not fair for NY area sca-subscribers.

1264. Muzak in NYC (correction)

There are only three coastal cities in Northern California that have
colleges of any size: San Francisco, Santa Cruz and Arcata/Eureka. I'd
assume it would be one of the latter two with Santa Cruz more likely.
A quick look showed Class C stations in both markets, but I wasn't
able to find one running 250 watts fulltime, just one running 250
watts at night.

==========

In-Band-On-Channel digital radio is a hot topic at the NAB 2002 convention, but Clear Channel SVP/Capital Management Bill Suffa isn't convinced it's a good idea -- R&R reports he told a Tuesday session that daytime-only IBOC, as endorsed by the NRSC recently, is the "death knell" for AM radio and that several financial issues are blocking IBOC's implementation in America.

The comments drew disagreement from Susquehanna SVP/NRSC Chairman Charlie Morgan, who said that radio "needs IBOC for our long-term survival." At the same panel, Ibiquity President Bob Struble said a typical station will spend $75,000 on IBOC equipment and fees, and that General Motors had proposed that the radio industry subsidize IBOC car radios at a $50-per-unit rate, a proposal that was rejected.

Owner killed by falling engineer

(AP - Hattiesburg, MS) Local officials are expressing shock over the turn of events that led to the death of two local men.

James Hartwick, a veteran radio engineer, fell from a radio tower Tuesday while attempting to replace anticollision lights atop the WMFM tower.

Hartwick apparently plunged 900 feet, and struck radio station owner William Hickman as Hickman was disposing of garbage.

"It's just so sad," said Irwin Rapides, an announcer with WMFM. "Bill was such a nice guy. He had thrown a "5-share" party for his staff, and was taking the crawfish heads out to the dumpster, when this drunk engineer came screaming out of the sky like a meteor. It's just so unfair."

Authorities have planned a news conference for Friday at 2 PM. Investigators are also awaiting toxicology reports on the decedents.

>>

Santa Cruz has all the stations it can support right now, and for a liberal community such as Santa Cruz, both stations are being programmed as hot-talk, or, more accurately, as hate-talk, by a mother-and-son ownership team. The stations are co-owned and share the same towers.

There is a vacant 1540 allocation in the Santa Cruz area, but the station was deleted days, whereas the station's night facility was retained as "internationally notified". This was in connection with a very curious arrangement whereby Westinghouse Broadcasting paid the station owner to keep the station dark so it could make improvements to its S.F. 1550 station ... which improvements were never made.

The instant application is for Acrata, and was more exhaustively described in an earlier post.

I suspect that the report was seriously distorted. There was little
distinction made between AM and FM IBOC.

IMO, CC is 100% correct that Ibiquity AM IBOC would doom the AM band.

OTOH, FM IBOC isn't the 100% technical disaster of its AM cousin. I
doubt that it's worth the effort. Whoever thinks that the radio
industry should pay Ibiquity big fees and then subsidize the sale of its
system is daft.

And, if Infinity and CCU do not go with IBOC, the system is pretty much dead before it starts. Those to companies hold the bulk of non-reliegioss, non-Standards and non-ethnic AM shares in the USA. Whatever all the other AMs do is irrelevant if the system is to work.

I attended the RTNDA convention held in conjunction with NAB this
year, and I got to hear the Ibiquity demonstration at their booth.

Note first of all that presumably, the demo was set up under ideal
conditions. Ibiquity had an AM and an FM station in Las Vegas
broadcasting IBOC digital. At the booth one was able to A/B the FM
signals, but only the AM IBOC signal was available for listening. Why
that was, will be obvious in a moment.

Listening impressions: Both AM and FM digital signals are noticeably
degraded from analog. The first thing I noticed in A-B'ing the analog
and digial FM signals was that the digital signal had _no bass_.
Other than that, at first listen (on Sony MDR-7506 headphones) the two
were pretty close, but paying closer attention I noticed that
something just seemed to be missing from the digital signal. As it
should be--the compression is much heavier than the typical MP3 file.

The AM is just a joke. The digital AM signal sounded like streaming
audio on a dialup internet connection. Just horrible. Any
decently-engineered analog AM signal sounds better, even on a
narrowband receiver. The Ibiquity rep swore the AM digital signal was
in stereo, but I'll be damned if I could hear any separation--and this
is on headphones, mind you! The gross digital artifacts were
immediately noticeable. When I pointed out to the Ibiquity rep that
this truly sounded wretched, he could only mumble something about
"they're constantly working on improving the compression algorithm and
the codec."

The engineers are, of course, impressed with themselves that they got
a compression algorithm that drastic to sound as good as it does. To
be fair, it is quite a technical achievement. Never mind that it
sounds like crap, the fact that it works is pretty amazing. But it
reminds me of the Samuel Johnson saying about a dog walking on its
hind legs. The marvel is not that it is done well, but that it is

done at all.

Looking at it from the point of view of Joe Sixpack, there is no point to it whatsoever. Many of the arguments made in favor of IBOC are marketing arguments, on the lines of "we have to be digital, because everything else is, and consumers expect it." But remember, the average listener thinks radio already IS digital. Their car radio dials show digits, don't they?

How supposedly intelligent business people can think this is the salvation of radio is utterly beyond me. The AM IBOC system would be a horrible step backwards in audio fidelity. The FM digital signal is just a little worse than analog , but make no mistake, _it is worse_.

The Clear Channel guy is absolutely right that this system would be the death knell for AM broadcasting in the U.S. The FM system is merely pointless.

Mark Howell

Maybe he's into the long distance AM listening hobby. In the daytime I get
a station on every channel, and nulling it away I get another one under it.

Digital would ruin that by making nulling impossible (you can't tell one
station from another by ear and so can't null the loud one away).

In a way of course syndication also ruins it, giving you the same programs
everywhere; but just by making it less interesting.

Out of the seven commercial AM stations in the USA that have tested IBOC digital, three are owned by Infinity, one is owned by Clear Channel, one is owned by Bonneville, and two are independently owned.

The Clear Channel-owned station, 960 KABL in Oakland, CA, normally broadcasts in analog C-Quam AM Stereo, while the others are normally analog monaural AM.

Mark, I heard the demos at the Ibiquity booth. Then I listened at the Harris, Nautel and BER booths. And I listened along with 11 chief engineers from our company, as well as the owners of a group of stations in Puerto Rico. We all had about the same conclusions after nearly 3 hours of sampling.

The AM through a hybrid digital/analog transmitter was "FM quality" as long as you could not A/B it. There was slight ringing on deeper male voices, sort of like a mild falnge effect. That is being corrected in the next update of the software, but music sounded really good.

The FM A/B analog/digital is roughly the same. I see no gain on the pure quality issue but the reduction of multipath is of great significance to many stations.

The software for the audio is not finished. This was made clear in the IBOC conference on Tuesday.

The AM night issue may be resolved if the commission sees that improving the band quality is worth reducing adjacent channel reception in secondary coverage areas.

I did conclude that a new transmitter that is a hybrid is essential; separate DAB type processing is necessary for the IBOC audio, or it gets really awful very fast.

>> How supposedly intelligent business people can think this is the salvation of radio is utterly beyond me. The AM IBOC system would be a horrible step backwards in audio fidelity. <<

Like I have been saying all along.... the digital stuff should be on the *receiver* side, not on the *transmitter* side. Keep the signals 100% analog for the best performance and compatibility with zillions of existing radios, and then use DSP on the reciever to clean up the received AM Stereo and FM Stereo analog signals and then the result will be undoubtably superior to that of any IBOC system.

Some radios are already doing exactly this. And it works excellently, even in very adverse conditions. The FM Stereo comes through crisp and clear, and the AM Stereo comes through solid and stable -- a marvelous combination of both analog *and* digital technologies.

So if it ain't broke, don't fix it... especially if the thing you are going to fix it with will turn out much worse!

I agree. I have many, many mics, but this one is great for so many
applications. I love it. I mainly use it for interviews, but it's very good
for speech in a studio too.
It's a mono condenser (you don't need a stereo mic).
Get a proper windshield for it though!

IBOC, phatever its pros and cons, is compatible with analog. The only
distinction is a narrowing of the badwidth to 5kHz on AM, not as horrible as
would sound since probably up to 95% of what is listened to in sales demos
on AM is talk... which might sound better without the higher end.
>
> So if it ain't broke, don't fix it... especially if the thing you are

Most people would say AM is seriously broken. Interestingly, at the NAB, the
non-domestic station representatives were the ones almost in a frenzy over
IBOC. I met the manager of a 50 kw AM in Caracas at the BE booth; he said
that anything that would give life to AM in his market is worth a try as AM
shares are down to less than 10% of listening now (although the current
"promotion" going on in the market may help the news stations some!)

Since I've never heard this thing, I'm in no position to quarrel with your assertions that it sounds bad. I certainly agree that it's a technical marvel. But I think you're wrong when you say there's no point to doing it.

Warts and all, this system will provide radio stations with a cheap way of providing a two programs on the same frequency at the same time. I know that the same thing can be accomplished using a normal SCA, but not many stations are using that for a mass audience.

I'm still curious to hear it for myself.

Apparently you've never heard the concept of "sibilants" and why they make high frequency response essential for natural and understandable reproduction of human speech, especially in noisy environments.

The Electro-Voice 635A is as good an all-purpose mic as you'll find.
They cost about $100, often discounted, from any broadcast equipment
supply house such as Harris, BSW, or Full Compass.
Musiciansfriend.com may also have them, although I haven't checked.
They are very widely used and you should have no trouble finding one.

I have never heard any discussion of using IBOC to do separate programming.
In fact, the system does not seem to allow that, as it falls back to analog
when the digital signal is not capturable. So, you have to have the same
content on both the digital and analog signals.

No, the concept I'm familiar with is the fact that most of the 700 million receivers in the US don't "hear" above 5 kHz anyway.

But mostly, I'm familiar withthe audio response of a POTS line; I hear people fine within the POTS bandwidth. In fact, the ability of a single line to cary an analog phone service and DLS capabilities is that the phone line is rolled off at an early age.

What's the frequency response of your "digital" cellphone?

>> No, the concept I'm familiar with is the fact that most of the 700 million receivers in the US don't "hear" above 5 kHz anyway. <<

Oh, sure they do... not at full strength of course, but even with a "3 kHz" ceramic filter, an AM radio will have some degree of response all the way up to NRSC 10 kHz limit and beyond, especially with the large amount of pre-emphasis that some monauaral stations use (in the USA, AM Stereo stations are restricted to the 75 uS NRSC pre-emphasis standard while mono stations are not).

You also neglect the fact that people with analog-tuning radios will likely tune them for the best sound, rather than to the exact center of the AM signal, which dulls the treble response. At the expense of higher distortion, this is the oldest trick in the book for getting better high frequency response out of AM radios.

>> But mostly, I'm familiar withthe audio response of a POTS line; I hear people fine within the POTS bandwidth. <<

That is because the bass is correspondingly limited as well. A typical 3.5 kHz telephone response is understandable because everything below 200 Hz is cut out as well. But on radio, there is no such bass limitation and this low frequency content tends to make the sound "muddy" and hard to understand with narrow bandwidth.

AT&T's "TrueVoice" system consisted of a large boost (+14 dB) in the 100 to 300 Hz range to give telephone systems better low frequency response, but with the natural lack of bass response in phone earpieces, this is not enough to "muddy up" the sound. (BTW, wouldn't you know, but our pal Leonard Kahn sued AT&T on this because he claims he patented the same exact thing in the 1960s!)

Also, speech without high frequency sibilants is OK to understand for those who speak the language fluently or who are comfortable with the accent of the person who is speaking. But for those who do not understand English well, or from people who are speaking it with a heavy accent, you need the sibilants to help you comprehend it. Otherwise sounds like "F" and "S" start to sound alike and that reduces comprehension level.

>> What's the frequency response of your "digital" cellphone? <<

I don't have one, but even for analog land-line phones, the telephone industry commonly uses an 8 kHz sampling rate, which provides a theoretical maximum audio frequency response of 4 kHz, but with typical anti-aliasing filters it is somewhat less.

This is just the most absurd, unmitigated bullshit I have ever heard form you. I happen to be only moderately proficient in about 4 languages beyond the ones I speak fluently. I frequently speak with people on the phone who speak on of my lesser languages better than I understand those languages, and I have no more difficulty understanding them on the phone than in person. And, in reverse, I often speak with people who don't speak one of my dominant tongues as well as I do and they have no trouble understanding to the extent of their abilities, whether in person or on the phone.

Unless you are polyglot (which I doubt), and have extensive experience in the areas of speech comprehension, your opinion here is about as useful as wheels on a fish. And as absurd, too.

Well, this one isn't nearly as bad.

There is no endangerment of life, there is no apparent property damage (maybe there will be some, who knows), there is no deliberate malicious emotional distress involved, and no criminal acts.

If you compare it to some other stunts, such as a hoax report that the Mayor of a city had been killed, or malicious invasion of a mosque, or something causing a major traffic jam, or saying that "we planted $100 bills in library books" (causing major cleanup efforts), or running a ticket giveaway that causes a near-riot scene -- this is minor.

Be thankful that's all it is.

Actually, David, he's mostly correct about this. Much of the intelligence in speech IS in the higher frequencies. You know this. And the the details are all in higher frequencies, especially sibilants. But, in this case, he's exaggerated the effect of frequency limits...Anything above about 2.5 Khz will get you where you need to go.

This can be demonstrated with filter selection on an SW receiver working MW bands. You're familiar with this concept. I suggest Kevin give it a try.

One of the branches of my business is archiving audio. And I've been working with pretty sophisticated DSP software for a number of years now. I was trying to recover musical content, recently, from a recording made 40 years ago, on a portable reel recorder. You can imagine how dreadful the sound was. One of the steps in reducing the noise was to establish a passband of frequencies that would contain what musical content was there, so that noise falling outside the passband could be removed without artifact. It's surprising how low the top end could go while retaining sufficient musical detail to make the project worth

continuing. It was a harpsichord piece, so there was a lot of upper end harmonic detail. Well, spectrum analysis showed that there was no musical content, harmonic or otherwise, in this recording above 2.6khz...(Did I mention it was a dreadful recording?)...2.6khz, on a harpsichord piece. So I removed all spectral content above 2.6 khz. Amazing how removing all that noise cleared up intelligibility of what remained.

However, this was all done at CD sampling rates and word depth.

Sampling at lower levels with smaller words did, indeed produce a loss of intelligibility that was different than digital filtering. And it was pretty unpleasant. Tests with speech confirmed that there would be significant loss in intelligibility if the sampling rates and word depth were not sufficient. This had to do more with distortion and digital artifacts than it did limit of frequency content.

HOwever, I think Kevin is interpreting that the range above 5 kHz is
critical to understanding. Those of us with mixed-use DSL lines form PacBell
know that they roll at around 5 kHz and the difference in quality is not
perceptible. Some of this, no doubt comes form going trough newer switch
equipment, but the fact remains that
>

I use both and R4B and a TenTec 350; the 350 is a good choice for empirical evidence as it has something like 40 different settings on bandwidth. However, there is a caveat: much depends on the bandwidth of the received station and the band conditions. I have tried the TenTec in a relatively quiet environment in Palm Springs, CA. My listening is mostly to the AM stations in Mexicali, on the border. I find that using the 10 kHz bandwidth (created by a DSP process, not real filters... the shape is better than crystal filters, and not as good as mechanicals) that the listening experience is not pleasant with lots of higher frequency "noise" and adjacent channel atrtifacts coming in. At 9 kHz the effect from the adjacents is less, but the sound is too "thin" and tinny. Only at either a 4.5, 4.8, 5.0 or 6.0 is listening a pleasant experience with better intelligibility and anjoyment. By the time it gets to 3.6, the elimination of higher frequency data makes it harder to understand. The range between 3.6 and 4.5 depends on the station itself, some sounding better as bandwidth is increased and other not doing as well.

That is probably what I am hearing on the DSP receiver. Naturally, in the desert and in an urban setting, there is some residual band noise. The noise curve probably increases above about 4 kHz and the usable content of AM transmissions decreases. This explains why at 4.5 and above, the AM

listening experience is not as satisfying.

Of course, a local signal with greater strength to overcome the band noise floor would be slightly different... however, we are not dealing with fidelity but the ability to understand and, even, enjoy, with everything over 5 kHz rolled.

In a different era, most international phone calls were done by companies like Cable & Wireless and All America Cables & Radio. When I lived in Ecuador, it was necessary to book a call to the US several days in advance, and then one got the pleasure of talking over a subject-to-fading shortwave signal that was transmitted by narrow band SSB. This process was used as it was able to capture the most content even with bad atmospherics. The audio bandwidth (and I saw the AAC&R site in Ecuador) was around 2.8 kHz. Both very low and high were rolled, and it was somewhat like talking with Darth Vader... yet they had somehow optimized the audio filtering for intelligibility in this system. I wonder if anyone has the design specs or background on how this was done?

NPR AND THE FALLOW TRIUMPH OF PUBLIC RADIO

By Norman Solomon / Creators Syndicate

A triumphant story about National Public Radio appeared in late March on the front page of Current, the main newspaper of the public-broadcasting industry. "NPR Lands Most Listeners Ever," the headline announced, over a summary of the latest Arbitron figures: "NPR programs reached 19.5 million listeners a week last fall, and member stations drew a record 28.7 million listeners. One in seven Americans age 25 or older listens to an NPR member station each week."

Network officials are exultant about the impressive numbers. "This demonstrates that NPR is a leading source for news, information and entertainment in America," says Ken Stern, executive vice president. By far, the biggest audiences have been tuning into NPR's two weekday drive-time news programs -- with an average of 1.87 million people listening during any 15-minute period of "Morning Edition" and a 2.22 million average for "All Things Considered."

For a pair of shows with combined airtime of 20 hours between Monday and Friday, that's a very wide reach to a whole lot of ears. "The data seem to validate a systemwide trend toward adding more news and talk programming at stations," Current reports. Overall, "public radio has steadily gained audience for years, even as commercial radio lost ground."

For listeners interested in news and politics, "public radio" is an obvious choice, while commercial radio slides deeper into an abyss of mediocrity and corrosive gunk. Boosted by the bipartisan telecommunications "reform" law of 1996, just a few conglomerates now own several thousand stations nationwide between them. Tour the dial and you'll hear a narrow play list of corporate-filtered music, heavily right-wing and mean-spirited talk shows (Rush Limbaugh, Don Imus, Dr. Laura...), scant news, and barrages of commercials that extend from mildly unpleasant to awful.

NPR has plenty of time for news on the air. Yet, as public radio's dominant network, NPR has largely reneged on the promise of public broadcasting that stirred hopes 35 years ago with release of the Carnegie Commission Report -- which declared that public broadcasting should "provide a voice for groups in the community that may otherwise be unheard." In 2002, for the most part, "Morning Edition" and "All Things Considered" provide a voice for the same political, economic and military interests that are heard, ad nauseam, via other major media.

A key factor is the Corporation for Public Broadcasting -- where everyone on the board of directors has been nominated by the president of the United States and confirmed by the Senate. The nonprofit agency doles out federal funds to public radio and TV stations. "With its hand on the till," notes David Barsamian, a longtime independent radio producer, CPB "wields considerable power and influence over public broadcasting."

In his new book "The Decline and Fall of Public Broadcasting," Barsamian points out similarities between the top execs currently running CPB and NPR: "Robert T. Coonrod has been the president and CEO of the CPB since 1997. Prior to joining CPB, Coonrod was deputy managing director of the Voice of America," operated by the U.S. government. Meanwhile, "NPR's president and CEO Kevin Klose served as the director of the International Broadcasting Bureau, which oversees VOA, Radio Free Europe, Radio Liberty, and Radio and Television Marti."

At NPR News, the diversity of perspectives in reportage and analysis is particularly limited on subjects like U.S. foreign policy and nitty-gritty economic power. Whatever fine journalism airs on NPR -- and there definitely is some -- gets dwarfed by mountains of conformist stenography for the powerful, with routine reliance on official sources.

The preponderance of deference to government outlooks has combined with outsized programming impacts of corporate donors that "underwrite" -- and, in some cases, literally make possible -- specific shows. Private money is a big determinant of what's on "public" broadcasting.

Major companies "have a huge investment in the economy and can use their economic power to leverage program content," writes Barsamian, producer of the national weekly public-affairs program "Alternative Radio" since the mid-1980s. "Independent producers who approach PBS and NPR for airtime get a much warmer reception when they have an underwriting package in hand. Overwhelmingly, programs that will attract and please corporate underwriters and, crucially, won't rock the ideological boat, get access to the airwaves."

But dozens of community-based noncommercial stations, with much smaller budgets, are striving to bring vibrant news and public affairs to listeners without mainlining the fare pumped out by National Public Radio every day. Those stations deserve our support.

At the same time, we should vigorously critique and challenge what comes under the heading of "NPR News." Victory in the quest for ratings is not what public broadcasting is supposed to be about.

Norman Solomon's syndicated column -- archived at www.fair.org/media-beat/ -- appears weekly in the San Francisco Examiner and other newspapers.

Depends... At some point this is like yelling fire in a theater, inciting a riot, or telling a tall tale that not everyone will recognize.

If enough listeners go nuts, then they may be liable. Again, this goes along with knowing your audience. If there was reason to think that your audience is generally malicious and stupid enough to go along with a publicity prank, then a court may find you liable.

Free speech doesn't come without the strings of responsibility attached. They're perfectly within their rights to say what they did, but they also are responsible to some degree for knowing what will and what will not incite a crowd in to hysteria.

1324. Can you help the BBC find English language radio stations in Asia and Africa?

Newsgroup: rec.radio.broadcasting
Date: 2002-04-17 14:32:56 UTC
From: fnordguy@hotmail.com
Message-ID: <ubr1soqf8n9n8a@corp.supernews.com>
Source record: 11236

I am a researcher helping BBC Radio 4 to find English-language radio stations for a radio programme they do called A World In Your Ear (http://www.bbc.co.uk/radio4/aworldinyourear/). They describe it as "A showcase for the best English language radio on the planet including features, plays, phone-ins, music and comedy shows. A half hour of eavesdropping on the world that reveals a kaleidoscope of voices, sounds and places".

We are looking particularly for:
1) English language radio stations in Asia and Africa - not all-music or all-news stations but stations with a talk format or which offer drama etc.
2) Radio programmes with a "transport" theme - traffic reports from Greenland, say?

If you know of anything suitable, please contact me directly at david.brake (at sign) journalist.co.uk
If there is a programme on the station which you particularly enjoyed it would help if you could let me know.

The station doesn't have to have a website or be streamed over the Internet for our purposes.

Thank you for your time and I hope you will be in touch soon.

P.S. If you want to catch the programme, it is broadcast on Fridays 13:30-14:00 (UK time) and Sundays 20:00-20:30 for the next five weeks and streamed from the website live, though for copyright reasons the audio is not
archived.

1325. For sale: Part ownership of AM CP in California.

For sale:
Partial ownership of AM CP in Blue Lake, CA.

We are still seeking active or inactive investors with at least $10,000 each to help us acquire the CP for a new AM station in Blue Lake, CA near Arcata and Eureka.

It is for 1450 KHz, 250 watts, fulltime.
Non-directional. Can go to 1 KW.

Total consideration is $70,000 for 96 percent of the stock. I own 4 percent.

Seller says $30,000 down will do it. The station is estimated to be worth at least $150,000 the day it goes on the air!

Arcata, CA nearby (About 5 airline miles) is an important college town of about 16,000 population and at least 75000 college students. Eureka, CA is about 10 miles away and has about 26,000 persons. The county has well over 125,000 people.

Hi folks:

I have a friend who will be doing moderator duties this weekend while
I visit Kansas City (actually Overland Park, KS) and see family members
that I haven't seen in a few years.

He's technically competent, but he may let stuff through that normally
wouldn't go through.

This is by design. I told him to take it easy on the editing... :)

I'd say you have an extra "zero" in the student population. Humboldt State University couldn't possibly handle 75000 students. 7500 sounds about right.

Blue Lake is a very small town located approx 5 miles *inland* (East) from Arcata; Eureka is about ten miles South of Arcata. Eureka also has a 5000 watt station on 1480 kHz and isn't likely to be served by a station in Blue Lake.

It's an interesting CP, but I wouldn't expect to "get rich quick" on it.

Amateur Radio Newsline™ Report 1287 - April 12 2002

(Note: Producer Bill Pasternak, WA6ITF is away on business this week. ARNewsline™ Report 1287 was produced and recorded in New Orleans Louisiana by Don Wilbanks, KC5MFA)

Amateur Radio Newsline report number 1287 with a release date of Friday, April 12th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Another threat to the 2.4 Gigahertz band. This time it comes from the FCC. That story is first on Amateur Radio Newsline report number 1287 coming your way right now.

(Billboard Cart Here)

**

RADIO LEGISLATION: FCC PROCEEDING PUTS NEW PRESSURE ON AMATEUR MICROWAVE BAND

The FCC has again targeted Amateur Radio's primary allocation at 2390 to 2400 MHz for possible sharing or use by other radio services. Newslines Norm Seeley, KI7UP, has the details:

--

According to the ARRL Letter, a Notice of Proposed Rulemaking known as WT Docket 02-55 has been presented by the FCC. The Letter says that it invites comments on either sharing the 2390 to 2400 MHz band with public safety services being displaced from 800 MHz or moving amateurs elsewhere.

The N-P-R-M identifies 2390 to 2400 MHz as an "Unlicensed P-C-S Band." Unlicensed, asynchronous P-C-S devices were authorized there in 1995, but Amateur Radio remains primary.

Why the action now? The FCC says that its receiving an increasing number of reports of incidents of harmful interference to public safety systems in the 800 MHz band. To alleviate the problem, the Commission now is looking into restructuring 800 MHz and moving some occupants elsewhere. And 2390 to 2400 MHz could be where those users get moved.

But says the FCC, that’s only one piece of spectrum being considered. One place its not looking is the adjacent 2385 to 2390 MHz band. The FCC says it can’t consider 2385 to 2390 MHz because that part of the band is slated to be auctioned off.

This is the second threat to the ham radio allocation in less than a year. Just last summer, the FCC invited comments on its proposals to reallocate some

spectrum in the 2390 to 2400 MHz amateur segment for possible use by unspecified mobile and fixed services. The Commission has also proposed 2390 to 2400 MHz and other bands to support the introduction of advanced wireless systems, including so-called third-generation or 3 G mobile systems. The FCC also has asked for comments on whether amateurs could share the band with government users.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

WT Docket 02-55 was released in mid-March but not yet available for public response. The FCC will officially invite comments for 30 days after the NPRM is published in the Federal Register. Reply comments will be due 60 days following publication in the Federal Register. The ARRL says that it plans to file comments in this proceeding. (ARRL)

**

RADIO LAW: FCC MAY MANDATE FASTER CONVERSION TO DTV

Federal regulators may look for ways to mandate faster transition to all-digital television if the TV industry fails to move quickly enough on its own. This, according to a Federal Communications Commission official speaking on Friday April 5th.

The comments are from Ken Ferree, chief of the FCC’s Media Bureau. And what he has said adds emphasis to a proposal by the agency's chairman that aims to bring digital TV to more American viewers.

FCC Chairman Michael Powell has challenged everyone involved in the digital conversion, including television networks, local network-affiliated stations, cable and satellite service providers and equipment manufacturers to voluntarily meet a series of goals on the way to a 2006 deadline.

Accordng to Ferree, Powell’s proposal, which was sent to Capitol Hill and the industry on Thursday April 4th is an effort by the FCC to pressure the industry into voluntary compliance. He says that Chairman Powell believes exposing more consumers to the technology of digital television will stimulate them to demand more and thus jump-start development. (Published report)

**

FCC TO UTILITY: STOP INTERFERING WITH HAM RADIO

The FCC has told GPU Energy Corporation of Morristown, New Jersey to clean up the harmful interference that the utility is causing to several area radio amateurs. In a letter to GPU Energy the FCC said that incidental interference from its Part 15 devices to operations of authorized stations cannot be tolerated and that use of the devices cannot resume until the harmful condition is corrected.

According to the W5YI Report, those hams complaining have been unable to find a satisfactory remedy through the GPU complaint resolution process. They turned

to the FCC which investigated. Now the FCC has told GPU that unresolved interference complaints may constitute a rules violation that could lead to fines. The FCC urged GPU Energy to contact the ARRL for advice in resolving the issues. (W5YI)

**

INDUSRTY NEWS: NEW DEALER & MANUFACTURERS GROUP FORMED

During the informal annual industry meeting of Amateur Radio manufacturers held in Milwaukee, Wisconsin and hosted by AES during Superfest 2002, the industry decided to create a formalized and official industry group for dealers and manufacturers.

The American Association of Radio Enthusiasts (AARE) was formed as a non-profit corporation for the promotion of amateur radio and emergency communications into areas outside of amateur radio and to provide a conduit for dealers and manufacturers to exchange ideas, to work together on projects, to help ham radio grow and to double the number of hams in 5 years.

Members of this group will be the manufacturers and dealers of radio and emergency products. The group will be ‘the voice’ of the manufacturers and dealers in radio, much like the American Radio Relay League is the voice of each ham radio operator. (AARE)

THE CONVENTION SCENE: HAMFESTS ARE SAFE

The ham radio convention season is in full swing, but some radio amateurs are asking if it’s safe to attend them. President Bush says that we have to put 9/11 behind us and all Americans have to resume normal life. Most of us have, and the shows are going on. But regardless if it’s the OSCARS or a tiny hamfest, event planners are now taking a closer look at show security. This includes the giant Dayton Hamvention. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, looks at what they are doing to keep you safe as you enjoy ham radio’s greatest show on Earth:

--

If you travel by air, or even visit your local police department, you have seen heightened security measures in place since the terror attacks of last September 11th. And while nobody expects an al-Quida sponsored assault on a hamfest, law enforcement and planners of even the smallest events cannot dismiss the possibility either.

A few weeks ago, the Dayton Hamvention mailed out a promotional flyer. One of the items it contained was an area dealing with show security. In reality, what was shown is nothing more than an update to what's been in place for several years, but as the magic weekend of May 17th to the 19th approaches, its important to take a look at what the Hamvention will be doing to make your stay safe and secure.

The rules in effect are the same we have all been living with since 911. Be prepared to show photo I-D upon request. Also be prepared to have vehicles, merchandise and personal items searched. This may be especially true of large containers such as backpacks.

Do you carry a weapon for self protection? Sorry, but no weapons will be permitted into the area. Hamvention says that even applies if you have a license to carry a concealed weapon. Leave the weapon at home. You won't be permitted in with it.

Nor can you bring in any ammunition, explosives, chemical or incendiary devices. Also banned are alcoholic beverages, drugs and burglary tools.

This year there will be tighter scrutiny of vendors as they bring truckloads of merchandise into the flea market and exhibit halls. Since most of you will arrive well after merchandise is in place, this will have little impact on the average attendee.

And very important. Everyone must display at all times, so it's clearly visible, a Hamvention badge or ticket.

For the Amateur Radio Newsline, I'm Henry Feonberg, K2SSQ.

--

Garry Matthews, KB8GOL, is Executive Director of Hamvention 2002. He recently told CQ Magazine that the planners are trying to take common-sense precautions to provide security for a show of this size. Matthews adds that 99% of Hamvention attendees will not notice anything different from past years. The most important thing is to know that Hamvention 2002 and every other ham radio show is doing everything to keep you safe. (CQ)

**

THE CONVENTION SCENE: NO BIG ACTS AT HAMVENTION 2002 BANQUET

Speaking about Hamvention 2002, the planners say that you have spoken. As a result there will be no big name acts at this years grand awards banquet. Jim Graver, KB8PSO, is the General Chairman of Hamvention 2002:

--
Graver: "This year we are returning to tradition of years past and will not have a post banquet entertainment."
--

A few years ago, the Hamvention added concerts by top talents to its famed Saturday night gathering. Among those who have appeared are Joe Walsh and the Smothers Brothers. And even though the entertainment has been well received,

there has been a call from the ham community to get back to basics. And says Graver, so it shall be.

--
Graver: “We have gotten feedback from our attendees saying that they would like to have the same banquet that they used to have years ago. So, in 2002, the Hamvention is going to deliver just that: A banquet with great food, a celebration of the award winners, fantastic guest speakers and of course prize drawings.”
--

Jim Graver has a lot more to say about Hamvention 2002 and what will be happening this year. You can hear it in Part 2 of Hap Holly’s exclusive interview with KB8PSO. Just take your web browser over to www.rainreport.com and click on this weeks special. Or call area code 847-827-7246. That’s 847-827-R-A-I-N. (ARNewsline(tm))

RADIO LAW: DIREC-TV SUES RADIO PERSONALITY OVER ALLEGED SIGNAL PIRACY

DIREC-TV Inc. is taking a New York City radio personality to court. This as it files suit against WFAN radio personality Sid Rosenberg alleging he violated the Digital Millennium Copyright Act and the Federal Communications Act by stealing its programming.

DIREC-TV says that on March 11th, while talking with Don Imus on the "Imus in the Morning" show on MSNBC, Rosenberg allegedly said he had used an illegally modified access card to steal DIREC-TV.

Although air personality Imus is said have told him what the was doing is "dishonest" and constitutes "stealing," Rosenberg allegedly continued to "boast" about using the illegally modified access card to watch movies and sports.

DIREC-TV says that with this lawsuit it is sending Mr. Rosenberg a very clear message. One that says using an illegally modified access card to receive DIRECTV programming is stealing and it violates federal law. Larry Rissler, vice president of DIREC-TV's Signal Integrity office adds that the company has a transcript of the program and what he calls Mr. Rosenberg's brazen comments on national television of stealing DIREC-TV programming. (DIREC-TV release)

NAMES IN THE NEWS: STEVE DIMSE K4HG HONORED BY NOAA

The National Oceanic and Atmospheric Administration has named Steve Dimse, K4HG, of Tucson Amateur Packet Radio, as recipient of one of its Environmental Hero Awards for the year 2002. Dimse, of Cudjoe Key, Florida is being honored for his volunteer efforts in real-time citizen weather observations.

The data collected by Dimse and other volunteers is used for numerical weather prediction research at NOAA's Forecast Systems Laboratory and for training and research at the National Center for Atmospheric Research. In Florida, the data

is used by National Weather Service’s Weather Forecast Offices for local area prediction. It is also used at Kennedy Space Center for weather prediction in support of launch operations.

Each year the agency presents a number of Environmental Hero Awards to people who don't work for NOAA, but have contributed a great deal to NOAA's ongoing job of providing environmental services to the citizens of the United States. For 2002, Dimse was one of five people chosen for this honor. (NOAA)

**

NAMES IN THE NEWS: GM3ITN INVITED TO FAULKLAND ISLANDS

Les Hamilton, GM3ITN, has been invited by the Falkland Islands government to visit the islands for the 20th anniversary of their emancipation. Hamelton played an important role in making the liberation happen. Jeramy Boot, G4NJH, has more.

--

It was Les Hamilton who first informed the UK government that the islands had been invaded. On the 2nd of April 1982, he received first-hand reports that the Argentine flag was flying over the islands. Les was therefore the first person outside the islands and Argentina to know that an invasion had taken place. He phoned the Ministry of Defense, who informed then Prime Minister Margaret Thatcher.

GM3ITN remained in contact with VP8 stations even during the period of occupation, passing vital information on to the MoD. Les and his wife Pilar also intercepted Argentinean radio communications, which Pilar - a university lecturer in the Spanish language - translated for the MoD.

Jeramy Boot,G4NJH.

--

The Hamiltons will be flying to Port Stanley for the 20th anniversary celebrations which take place on June 14th. Until recently, Les Hamilton's role had been a closely-guarded secret, known only by senior British politicians, military intelligence officers and a select group of radio amateurs. (GB2RS)

HAMVENTION 2002: THE HARA ARENA STORY

Earlier in this weeks newscast we spoke about plans for this years Dayton Hamvention. As most of you are aware, Dayton's HARA Arena has been the home of the Hamvention for many years. As a result the HARA has become as famous as the show it hosts. But there's a lot more to the HARA story than just the Dayton Hamvention as we learn from Amateur News Weekly's Jack Parker, W8ISH:

--

The HARA Complex is as unique as its history. In 1956, a dance hall called the Wampler Ballarena was built as the cornerstone of what is now a six building exhibition center. Originally, the location was a thriving, family-owned fruit orchard. Today it is a thriving, family-owned entertainment, conference and exhibition facility.

Very few entertainment complexes are privately owned. Even fewer are family owned. You see HARA was named by founding brothers Harold and Ralph Wampler. The arena building, built in 1964, ushered in entertainment to the Dayton area never seen before. The Rolling Stones, Elton John, The Who, Neil Diamond, The Beatles, The Grateful Dead have all played at the facility.

The HARA has survived and prospered by combining the professionalism of one of the areas largest exhibition centers with the care and personal concern of a family business. Because of this the HARA has been the catalyst to successful hockey in Ohio's Miami Valley. The Dayton Gems and later, the Dayton Bombers, have both enjoyed success while on the HARA ice. But, most agree, the one event that has put HARA ARENA on the map worldwide, is the Dayton Hamvention. It's where the Amateur Radio Community and a family owned business meet to carry on a wonderful tradition.

For Amateur News Weekly, Im Jack Parker, W8ISH

--

Today, the HARA Arena remains the home to many high profile events for the Dayton area. This includes Disney On Ice, Sesame Street Live, the Silver Sticks Hockey team and of coarse the Dayton Hamvention. And, contrary to rumors on the Internet, the Hamvention says that it's there to stay. (ANW)

**

EMBARRASSING TECHNOLOGY: SPYWARE DEBACLE DISCLOSED

Call it a gotch'ya. This as thousands of Internet users who thought they were installing a program for sharing music and other computer files apparently accepted a program at the same time that tracked their Web surfing habits.

The tracking program, or spyware, linked Internet users to an on-line sweepstakes game called Click-Till-U-Win. But the site was also collecting data on other recent cyberspace visits by the surfer's computer.

Spyware is a clandestine computer program downloaded to your computer without your knowledge that can track your Internet-surfing habits without your consent. These types of programs exist in the open elsewhere on the Internet, but in this case there was no disclosure and no option to reject.

Now at least three companies are posting new versions of their software on the web without the tracking programs. And one of the web sites is actually offering visitors to its site an apology. (Computing Technology)

**

INTERNATIONAL - UK: BRITISH HAM RESCUED BY HAM RADIO

Turning to international news, word that a ham radio operator and his wife on board a yacht that ran aground have been rescued. This, thanks to the efforts of radio amateurs on the Maritime Mobile Service Net.

According to reports from the ARRL and GB2RS, Dave Beane, G0TAG, and his wife Sara, were aboard the pleasure craft Tao when it ran aground on a reef off the north coast of Cuba on the 26th of March. Apparently their initial call for assistance to the Cuban authorities had no response.

So they turned to ham radio and the 20 meter Maritime Mobile Services Net. Radio amateurs in the United States and in the Virgin Islands were able to alert the authorities in Havana via the US Coast Guard and the Swiss Embassy in Washington. Later reports via amateur radio indicated the couple had been rescued and that efforts to salvage the vessel were under way. (ARRL, GB2RS, Q-News)

**

SPACE AND SCIENCE: SPACE REFERIGERATOR

SpaceDaily reports that when Space Shuttle Endeavour blasted into space recently it carried aboard the world's smallest version of a relatively new type of refrigerator. Called a pulse-tube cryocooler, the device was designed, built and tested under an agreement between the National Institute of Standards and Technology's Boulder Laboratories, Lockheed Martin Corporation and NASA's Ames Research Center. (ANS)

A NEWSLINE FOLLOW-UP: A POLITICALLY DISORGANIZED 11 METER CLASS D SERVICE - PART 3

Over the past two weeks, Amateur Radio Newsline's David Black, KB4KCH, has been looking at the not so political side of 11 meter Class-D C-B. In this third and final installment, David explores the reasons that there is little chance of C-B ever becoming a major two way radio political power:

--
The Citizens band radio service has a unique distinction. For all the years it has existed...for all the people who have bought and used 11 meter radios...for all of the public exposure CB has obtained TV, radio and the movies, 11 meter Class D C-B remains the only major radio service in the U-S without political representation in Washington. No support either before the FCC or Congress.

In the mid 19-70s, the Government held conferences to find better ways to use C-B. Today's Government leaders give it no attention. Congress and local governments are tired of consumer complaints against C-B operators running illegal power and who interfere with all sorts of consumer electronic gear. As a result, federal regulations are now in place that give almost any law enforcement official the ability to shut a C-B operator down. The C-B operator can appeal, but it is a long, and costly process.

So why is nobody on 11 meters seriously attempting to organize users of the band? As one former CB enthusiast suggests: Perhaps it's the sheer diversity of the CB radio community. CB has over-the-road truckers, sidebanders, emergency monitors, numerous private nets, the occasional family highway trip, and the usual assortment of troublemakers. Each of these groups operate separately and independently of the others with apparently little knowledge or regard for other uses of the band.

Whatever the real reason or reasons, one simple fact remains. When it comes to having a voice before the FCC and Congress, CB radio is out in the cold. Chances seem slim it will ever have such a voice. And without that, C-B operators like Gary D. White in Illinois are likely to continue to face Disorderly Conduct charges for disturbing anyone by transmitting on the 11 meter Class D Citizens Band.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

In closing, a word to those who have written. Some with questions. Other to add their own commentary. We sincerely appreciate your taking the time to write. You perspectives have been included in this final wrap-up. We thank you for your help in telling the story. (ARNewsline)

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at

Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA saying welcome to the year 2002, 73, and we thank you for listening."

This is a real deal...The price was lowered from the original post
that I placed because I am very motivated to sell this permit. As
previously stated I am unable to be bi-coastal and have had the sale

of an AM CP in Florida default thereby altering plans. The life of the Florida CP being as short as it is demands that things move quickly. This California permit expires May 2004. Meyer currently holds 4% of this permittee(is not part of our Florida permit) and is authorized to put together a group sale of this permit.If you've ever wanted to be an owner operator or a part owner without daily involvement this is a great opportunity. Contact Meyer at the above number or E mail me at <maxiumumradio@mailcity.com> for additional details.

1331. Software AGC Compressor Limiter with Pre-Emphasis like MBL4 or DJ Programs.

Newsgroup: rec.radio.broadcasting
Date: 2002-04-18 13:09:56 UTC
From: gbrowning48@hotmail.com
Message-ID: <ubthd4a1ejjg87@corp.supernews.com>
Source record: 11243

Could you please suggest a good software Broadcast DJ Program with a Builtin AGC Compressor Limiter with Pre-emphasis like OTSJUKE which don't have pre-emphasis. The only DJ studio type programs I know of that have built in compressors are Virtual DJ Studio, BPM Studio 4.2 and OTSJUKE. Are there any more?

The DJ programs MUST have atleast a AGC, any other programs like that?

What is a good software compressor limiter DirectX plug in to use for broadcast use even if you don't want to use the limiter feature? The MBL4 looks the best to me and the broadcast version is aimed at the traditional AM/FM broadcasters. The differences are principally the addition of suitable low pass filtering (15kHz for FM & 5Khz for AM) and pre-emphasis (HF Limiter) for FM broadcasters.

What else is around like this that has Pre-Emphasis and made for Broadcast use on the FM band?

Any comments from people who used the MBL4 program?

1332. RPU Rentals?

Newsgroup: rec.radio.broadcasting

From: theodric@transmitter.wmbr.mit.edu
Message-ID: <uc0g2i7msmfkee@corp.supernews.com>
Source record: 11244

I'm hoping to rent an RPU for an on-campus event. Does anyone know of a company (preferrably in the Boston/New England area) that rents these?

We'd like to do 15K stereo, but will settle for less if necessary. We're trying to broadcast a band live from an event on campus that's about 1/3 mile from our studios.

We were considering buying a QEI Quicklink II system specifically for these kinds of events, but it's not in our budget until next year. So we're hoping to find someone who will rent us a set on short notice (by April 27).

Any leads would be greatly appreciated.

Incidental re KGFJ==During WW2 all stations had to reduce power by 20 % (to conserve tube life, etc.) That mean when KPPC was operating KGFJ had to cut back to 80 watts. Learned this info from Charlie McKee, former CE of KALI, who had worked at KGFJ during wartime. In old days, folks went to church twice on Sunday, morning and eveni g, and to a "prayer meeting" on Wed night; thus the operating hours of KPPC==Ted Shireman

1335. GROL Radar Endorsement study guide?

Newsgroup: rec.radio.broadcasting
Date: 2002-04-19 16:05:50 UTC
From: Scott Ehrlich <scott@ai.mit.edu>
Message-ID: <uc0g2ulpdmcjfa@corp.supernews.com>
Source record: 11247

I am looking for a good guide (useful theory instead of just q/a) to study for the radar endorsement for my GROL.

Guides for the GDMSS/O and /M with good theory would also be great.

I have the Gordon West/Fred Maia/W5YI guide, but it just doesn't cover enough ground for my taste.

Thanks in advance for any leads.

Scott

The EV 635 is great for remotes, or on location quick records..but I
wouldn't use it in the studio. Get an RE-20 or a 421 Senheiser!

In response to Richard's post:
1) I think that the student population of Humboldt State, College of the Redwoods, and an acting school in the area is higher than 7,500-probably around 10,000.
2) The question of coverage -based on an engineering study- did indicate a listenable signal in Eureka with 1kw at 1450. In most countries 30khz separation is the legal spacing. What is more important here is the ability to minor change to 1420 or 1430 and power up to 2.5kw or 5kw(probably w/ 2 tower directional for the latter)and have seemless coverage of the entire populated area. You could power higher although it would not necessarily prove anything except to make you a prime customer of the local power utility.

I didn't think the poster was asking about studio work. My
understanding was that he was looking for something to use in the
field. I agree about the RE-20 or Sennheiser for studio work.

Amateur Radio Newsline™ Report 1288 - April 19 2002

Amateur Radio Newsline report number 1288 with a release date of
Friday, April 19th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Amateur Radio volunteerism is praised at the N-A-B Ham Radio Reception and a Montana senator calls for a change in the way the United States oversees the electromagnetic spectrum. These stories are first on Amateur Radio Newsline report number 1288 coming your way right now.

(Billboard Cart Here)

**

AMERICA AT WAR: HAMS PRAISED AT NAB AMATEUR RADIO MIXER

The heroism of ham radio operators who donate their services in times of national disaster, and especially those who volunteered in the days following the 911 terrorist attacks was not forgotten at this years National Association of Broadcasters Ham Radio Reception. The April 10th gathering was co-hosted by Kenwood Communications and CQ Magazine. It was CQ publisher Dick Ross, K2MGA, who took time to honor those hams who put their lives on hold, to be there when needed:

--
K2MGA: “I do want to take a moment to focus a little bit of attention on how proud we have a right to be as Radio Amateurs. I think we saw that on September 11th, when thousands upon thousands of hams throughout the United States jumped in their cars -- or -- in the New York are -- hopped onto the subways -- with back packs filled with radio equipment and did whatever they could. They are still doing ‘whatever they can,’ and that is really what Amateur Radio is all about.”
--

Ross comments were enthusiastically received. CQ was represented at the gathering by Ross and Editor Rich Moseson, W2VU. Also making presentations were Kenwood’s Paul Middelton K4NUH and ARRL President Jim Haynie, W5JBP. 600 to 800 radio amateurs who attended the NAB convention also usually show up at the Ham Radio Reception.

**

SPECTRUM ISSUES: SENATOR TO ASK FOR COMPLETE SPECTRUM REVIEW

A U-S Senator says that its time to overhaul the method by which the United States manages the entire electromagnetic spectrum. Montana Senator Conrad Burns, said on Monday, April 15th that he plans to introduce such legislation. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

Senator Conrad Burns says that he expects a two to three year battle over the legislation he plans to introduce this congressional season. But Burns also told a packed audience at the recent National Association of Broadcasters Convention in Las Vegas that he is going to put together a total spectrum reform bill because he does not think that Congress should be piecemealing how it makes spectrum available.

Senator Burns told the NAB audience that he predicts an intense battle over the legislation affecting multiple constituencies. He noted that many frequency bands are used by government agencies like the Department of Defense Department. Burns said that he is still awaiting a report from the General Accounting Office which is reviewing a large number of spectrum issues and related government practices.

And what does this mean to ham radio? In the short term probably very little. In the long run it could affect our future survival.

Depending on the scope of the Burns legislation and how much of it -- if any -- is ever enacted by Congress, the future use of all spectrum could well come under a bureaucratic microscope. Those services that legislators do not feel justify spectrum could -- eventually -- loose it.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP

--

Earlier plans to move some government operations to other spectrum now have little support in the wake of the September 11th terrorist attacks. Meantime, numerous telecommunications companies are pressuring the government to make large portions of spectrum available quickly, to introduce new consumer wireless services. (Published reports)

**

HAM RADIO IN SPACE: NEW FRENCH HAMSATS COMING

AMSAT has announced that two new French Amateur Radio mini satellites or picosats are planned for launch on May 3rd. This, as secondary payloads with the SPOT-5 satellite.

The two hamsats are being funded, designed and built by AMSAT-France. They are battery powered and should operate from orbit about 40 days. Both will transmit recorded voice messages using Narrow Band FM along with digital telemetry. Data will be transmitted at 400 baud BPSK. Downlink frequencies are listed as 145.84 MHz and 435.27 MHz.

An Ariane 4 booster will carry the satellites to orbit but the ham radio birds will not be free floating. Rather they will remain fastened to the Ariane’s third stage at a panned altitude of about 800 kilometers. Both of these new birds will switched on about ten days after the launch. (ANS)

**

HAM RADIO IN SPACE: AMSAT-NA TO RE-EVALUATE THE FUTURE

Meantime, AMSAT North America President Robin Haighton, VE3FRH, has called a special Board of Directors meeting for April 20th. This, to review the current fiscal situation and to decide on a proper course of action for upcoming ham radio space projects.

In a published column earlier this year, Haighton had commented that financial support coming to AMSAT for the Eagle satellite and other projects have been reduced as a result 911. Haighton now says that this continues to be the case.

Haighton does say that the design of another satellite called Echo is progressing and he should have more information to make public next month. The AMSAT North America president adds that the organizations forum at the upcoming Dayton Hamvention will offer a closer look at several proposed satellite projects. (ANS)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N-4-G-G-D Repeater serving Greensboro North Carolina.

(5 sec pause here)

**

ENFORCEMENT NEEDED: WORLDWIDE QRM TO 40 METERS

The March issue of the Monitoring System Newsletter talked about a rogue broadcast from Eritrea on 7.100 Mhz. A transmission that continues to be heard well in eastern North America.

According to the IARU, this broadcast can at times also be heard around the world. Also, the report says that its lower sideband can dominate the top few kilohertz of the 7.000 to 7.100 MHz Amateur band. (ANS)

**

ENFORCEMENT: FCC ARRESTS NYC UNLICENSED BROADCASTER

An unlicensed broadcaster has been arrested for refusing to shut down operations. Paul Dorleans was taken into federal custody on April 15th for operating an unlicensed FM radio station on 87.9 MHz in Brooklyn New York.

The FCC says that earlier enforcement actions had failed to discourage Dorleans’ unlicensed operation of the FM Station. The FCC, on more than one occasion, had issued notices to Dorleans directing him to cease operation. And the U.S. Marshal’s Service, in conjunction with the United States Attorney’s Office and the FCC, had seized his radio equipment on one previous occasion.

The United States Marshals Service arrested Dorleans working in conjunction with FCC Agents and the Office of the United States Attorney for the Eastern District of New York. So far this year, investigation of unlicensed broadcast operation by the FCC’s Enforcement Bureau has resulted in the shutdown of

over 20 unlicensed stations. Dorleans faces the possibility of a heavy fine and a prison sentence if convicted. (FCC Release)

**

ENFORCEMENT: FCC TO UTILITIES - DON'T INTERFERE WITH HAMS

The FCC has issued letters to five power utility companies to request that they contact and work with Amateur Radio operators in the area to resolve power line interference problems. According to FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth the utility companies are:

--
Hollingsworth: "Anderson Indiana City Utility, the Dominion Power Company in Richmond Virginia, Northeast Utilities in Berlin Connecticut, Southern California Edison in Rosemont California and the Soccoro Electric Co-Op in Soccoro New Mexico."
--

Hollingsworth says that the companies were instructed to report back in 90 days to outline the progress made in clearing these interference complaints. (FCC, RAIN)

**

SPECIAL COMMS: RADIO SOLO NOW ON THE GROUND

The United States military broadcasts to Afghanistan are still being widely heard on 8.700 Mhz, but are now land based. The broadcasts are being produced by the same unit that produced the Commando Solo airborne transmissions during the early stages of the war on terrorism. (Media Network)

**

NET INFO: BAJA NET MOVES

WB0YCQ reports that the Baja Maritime Mobile Net which meets 7 days a week at 8:00 am Pacific Daylight savings time has moved to 7.262 MHz plus or minus a few kilohertz. This is due to interference on the original net frequency. (WB0YCQ)

**

CONVENTIONS & HAMFESTS: SEVHFS IN LATE APRIL

The Sixth Annual Southeastern VHF Society Conference is slated for April 26th and 27th in Oak Ridge Tennessee. Program highlights include, antenna gain measurements, pre-amp gain and noise figure measurements, a Friday evening flea market with vendor displays, a Friday evening tour of nearby Ten Tec, and Saturday evening banquet with guest speaker Joe Dooley, P.E. of Oak Ridge National Laboratory. For more information contact Greg Robinson KB4NVD by e-mail to Rover@wireco.net (SEVHFS via VHF Reflector)

**

CONVENTIONS AND HAMFESTS: MT. BEACON HAMFEST POSTPONED

The Mt. Beacon New York Hamfest, scheduled for Sunday April 21st has been postponed. Planners say they are looking to reschedule. Stay tuned to Amateur Radio Newsline for an announcement of the new date. (KL7JCQ, WA2BSS)

THE SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

Ladies and gentlemen, with some words regarding Amateur Radio Newsline's current fiscal situation, here is Support Fund Administrator Andy Jarema, N6TCQ:

--
That's right. Its me. A.J.. And when you hear my voice you know I am here for one of two reasons. One is the bad – as in – help we need your financial support. The other is to say thanks to those of you who have kicked in to keep amateur Radio Newsline coming your way.

This week it's the bad. The numbers for the first three months of 2002 are in and its not good news. Right now we have about $145 in the bank and close to a thousand dollars in back bills sitting on my desk. And the people we owe money to like the phone company and our Internet providers want to be paid.

The bottom line is that this is once again a financial emergency. Only you can keep these weekly newscasts coming your way. We need your help, and we need it right now.

And remember. Amateur Radio Newsline Newsline is a federal 501c 3 corporation and a California certified non-profit corporation. This means that all contributions are tax-deductible.

The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066.

For the Amateur Radio Newsline Support Fund, I'm Andy Jarema, N6TCQ.

--

Again that's the Amateur Radio Newsline Support Fund, P.O. Box 660937, Arcadia California 91066. (ARNewsline™ Support Fund)

**

HAM RADIO IN SPACE: JERRY ROSS SETS SPACEWALK RECORD

United States Astronaut Jerry Ross, N-5-S-C-W has set a personal best . On Tuesday April 16th Ross made his 9th spacewalk on the latest of his seven

orbital flights. In doing this, the 54 year old retired Air Force Colonel set the record for the greatest number of flights and spacewalks ever by an Astronaut or Cosmonaut.

Prior to his current flight, N5SCW had logged 1133 hours in space.
Ross is flying for the seventh time and may not get an eighth turn. This is because of other astronauts in line for flights. (Published reports)

**

INTERNATIONAL-RUSSIA: SPACE TOURIST READY TO FLY

The world's second would-be space tourist is almost ready for takeoff. Jeramy Boot, G4NJH, has the details:

--
Russian space officials say that Internet industrialist Mark Shuttleworth has completed most of his training and is ready to visit the International Space Station.

Shuttleworth is a 28-year-old South African economist who made his fortune with an Internet business. He said he would conduct gene engineering studies while on the space station using animal stem cells. He said he hoped his research could be used to help find cures for Alzheimer's and Parkinson's disease.

Liftoff of has been set for April 25th from the Baikonur Cosmodrome in Kazakhstan. Shuttleworth confirmed that he is paying $20 million for the trip but in installments that will be complete only when the mission is over. That's the same sum American Dennis Tito, KG6FZX, paid Russian space agencies last year to fly to the international station, becoming the world's first space tourist.

For the Amateur Radio Newsline, I’m Jeramy Boot, G4NJH

--

Its not yet known if Shuttleworth will be licensed to operate the ham radio gear on board the I-S-S. (Space Adventures, published reports)

**

INTERNATIONAL - NEW ZEALAND: POWER COMMS STANDARDS TO BE SET

Powerline telecommunications and its potential as a source of interference will be a major topic to be discussed in New Zealand. This, from September 16th to the 30th. The gathering is slated for the city of Christchurch where a newly established committees, is working to create common standards for information technology equipment and radio and television products. According to NZART, this should prove beneficial to that nations radio amateurs. (NZART)

**

INTERNATIONAL – ZIMBABWE: BBC SUSPENDED FROM CAB

The Zimbabwe Broadcasting Corporation has been suspended from the Commonwealth Broadcasting Association for a year. This, as the print Media in Zimbabwe is becoming increasingly outspoken about the Zimbabwe Broadcasting Corporation and its political role in that nation. More information is on the web at http://www.rnw.nl/realradio/html/zimbabwe-latest.html. (Media Network)

**

DX

In D-X, The VK9ML DXpedition to Mellish Reef should be on the air as this newscast goes to air. The multi-national team will be on the air through the 22nd of April. (GB2RS)

Also, GB2RS reports that another major multi-operator DXpedition will be active as XW1HS from Laos. The operators, all resident in Thailand, include American, British, Swedish and Spanish operators, as well as 11 Thai nationals. (GB2RS)

**

THAT FINAL ITEM - HAM RADIO IN THE MOVIES: IMAX ISS MOVIE PREMIERES

And finally this week, ham radio is not only at a film premiere. It is actually an important part of the movie. This as the new 3-D motion picture about the International Space Station gets to the giant screen in a press preview on April 16th. Amateur Radio Newslines Bill Pasternak, WA6ITF, has more:

--
The movie we are talking about is the new IMAX film called Space Station. Amateur Radio on the International Space Station is a part of it. According to ARISS Program Manager Frank Bauer, KA3HDO, the film simply breathtaking:

--
KA3HDO: “It was the closest way that an individual could experience space without going to it themselves. It was spectacular from the persoective that you really felt like you were there. hat you were part of the team that was making Space Station happen.

It just was phenominal. Breathtaking views of the Earth, of Space Station and inside the cabin of the space station.”
--

Bauer says that it was pretty awesome to see Astronaut Bill Shepherd talk to the Texas students with using ham radio equipment. Also, ARISS appears in the movie’s credits.

According to Bauer, there were 21 members of the ARISS volunteer team attending and supporting the sneak preview. Visitors included Astronauts Bill Shepherd and Yuri Usachev. Also attending were the film’s producer Toni Meyers and National Air and Space Museum Curator Jack Dailey. The comments were all glowing and Bauer says that this is a must see movie.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

Consult local listings to find out when Space Station will be shown at an IMAX or OMNIMAX theater near you. (KA3HDO, ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm).

Before we go, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules, an application and information on contacting us is on our only official website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Mert Garlick, N6AWE, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

try http://www.radioshopper.com/repairs.html#Rental%20Equipment

http://www.baycountry.com/

http://www.rwonline.com/pandsdir/index.shtml

however, after renting the equipment, dealing with freq
coordination/licensing issues. antenna and equipment instillation, built in
compression, high noise floor, phasing issues, it might just be a whole lot
easier and simpler to see if the phone co can install some "dry"
(non-equalized lines). at 1/3 mile just put a transformer at each end and
life should be good.

Gibberish that proves nothing. Find me the official FAQ.

I think you're just afraid of progress. This newsgroup discusses everything radio, and a lot more besides that e.g. right-wing extremist philosophy, cults, conspiracy theories, etc.

If you don't want to read about something, why do you download the article? Masochistic tendencies?

SW pirates group is getting bigger and bigger

The SW pirates group does have already more than 600 members.
Just incredible how it did grow the last few months. It seems that the group
did grow out to be an important tool for loads of listeners to get the
latest frequency's used by pirate stations on short wave or to ask about
unit stations or just informing al the other listeners about a station
working on a strange not often used frequency. Ofcaurce there are more tools
and stuff in the group as the photo section, audio files and other need free
to download stuff, the link section and agenda.

It also seems due al the reactions we do receive from station operators that
due the group they received (more) reactions from other continents.
These guys and girls are announcing the transmissions also often in the
group.

So, We hope that we hope that in the near future we can welcome the 1000th
member.

If there are members/people with a webpage and you have also SW pirate
topics on your webpage we kindly ask you to think about joining up with the
SW pirates webring. it is very easy and will bring more traffic to your
webpage. Only thing we ask is to place a little script or html piece on your
page witch you will get when joining up. to join up go here
http://q.webring.com/wrman?ring=swpirateswebring&addsite

Also please link up to the sw pirates group. More members, more powerful it
will get

How 'bout a couple of spools of CAT5 cable and some repeat coils?
Quite cost effective in most cases, assuming that you can "lay" out
some cable. Not very mobile while in use, though.

(Fuzzy memories of ordering broadcast loops into cornfields and
forests. Figurativly, that is.)

z!

Indeed, and at our station we have four of them (RCA 44-BX), stored, with
desk bases and in fine working condition. And we wouldn't part with them
for anything. Oh, maybe we'd part for them for aboyt $2000 each. Even
locked up in an equipment closet, they're a beautiful link with the past.

what censorship? would that not imply that somone proof reads all content
before it is aired? or sit there with a finger on the delay button?

sure there are some limits. you cant perpetrate hoaxes (al la war of the
worlds) or say "free beer" in some states.

there is one hard but mostly unwritten rule for on-air people: "dont piss
off the clients"

you have to remember where the freedom of speach and press came from. in
jolly old england if you bad mouthed the crown you were imprisioned and/or
hanged for treason.

our founding fathers though this was so uncool, especially since the crown
was being a jerk at the time. They surmised that if you wanted to call the
king a scum sucking oyster that the worst that should happen is that he
challange you to a dual.

sure i have seen jocks get fired for things thay said in air... but it just
isnt real censership.

now the existing slander laws could be considered a form of censorship if
you streached the piont, but i think it's more of a limiting element then
true censorship.

now the military does have censors. they read your mail. they cut out
references to anything of military importance. remember the twin brothers in
"good morning vietnam"?

i guess the point i would like to make with this post is that if you feel
you need to do a paper on a topic where you have to solicit comments from
people on the internet (who may not even know what we are talking about) i
think you are in trouble at the outset. picture this: footnote 1 - some guy

on the internet. i bet that wont impress the prof.

if you focus your topic on the military censorship i think you will be able to find more "meat" for your paper. try http://www.afrts.osd.mil/ and perhaps http://www.voa.gov/.

good luck to ya, and e-mail me a copy before you submit it. ill be happy to censor it for ya

1354. Re: [Airwaves] Re: For sale: Part ownership of AM CP in California.

Message-ID: <uc9hs9c3cbf416@corp.supernews.com>
Source record: 11117

Dear Kevin:

One of the terms of the sale of the CP to my friend is that a site is guaranteed or he gets damages!

I have been in contact with the Blue Lake city manager about a tower site. The CP specifies a tower only 49 electrical degrees tall at 1450 KHz which is about 74 ft. Not exactly an environmental disaster. Some hams have taller towers than that for their beams!

(I should know. I'm a ham since 1950!)

We can get the CP for $30,000 down. Are you interested in investing?

73,

Meyer Gottesman, W6GIV
Macon, GA

1360. For sale: Partial ownership of new AM CP in California.

Newsgroup: rec.radio.broadcasting
Date: 2002-04-23 02:31:58 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <uc9hsuja8guq27@corp.supernews.com>
Source record: 11122

FOR SALE:

We are still seeking investors to help us acquire the CP for a new AM station in Blue Lake, CA near Arcata and Eureka. It is for 1450 KHz, 250 watts, fulltime, non-directional. Can go to 1 KW.

Listen up! A local Indian tribe is opening up a giant casino nearby. About 44,500 sq. ft. Will employ about 300 people. This is going to have a very positive impact on the local economy.

Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

Total consideration for 96 percent of the stock is $70,000 with no more than $30,000 down being required. Seller will finance.

The corporation and some equipment are included in the sale.

Tel: (478)741-1710 in Macon, GA or email please.

73,

Meyer Gottesman, W6GIV

Meyer,

I was approached some months ago by a third party inquiring as to the possibility of diplexing this CP on our AM tower in Arcata. I was told that our site is the closest this CP (possibly) could be moved towards Eureka and still cover Blue Lake.

Hence my question about the site.

In response to Ira's reply, I am fully aware of the requirement that a "real" transmitter site exist before a CP is granted. Often, however, after the CP is granted, the "real" site turns out to be unavailable or impractical for one or more reasons.

As for being interested, I think that with 3 FMs and 2 AMs, we're maxed out in that market, subject to a duopoly study. Also, 2 AMs are enough.

Hey There,

I'm not too sure about your particular request, but if you log onto blistering.com, they normally give you good updates/links on rock radio stations that are launching etc... including band news!

Although, the website deals with hard rock & heavy metal issues a lot more!

But definately worth a look though!

Hope this is of any use!?

Aren't there actually four AMs, counting KATA in Arcata? And a CP for
1200 kHz in Ferndale as well? I don't know if 790 is still active -
it's been a while since I was there - but there's 980 and 1480 in
Eureka and KATA on 1340 at least.

And five FMs, counting KXGO in Arcata?

However interesting the project seems, that market sounds saturated to
me. And a site in Blue Lake would provide marginal coverage into
Eureka.

Dear Kevin:

Thanks for the input about the Blue Lake, CA AM CP. You have been "upgraded" from a "hostile detractor" to a "pessimistic informer"!! HI! Just teasing!

Well whoever asked to diplex was not us! Also I don't thing 1450 would "live" with 1340. With such close spacing, the reject network design would be difficult.

I now know of a possible site just N. of the Arcata city limits that would be about 4 airline miles to Blue Lake. We only have to put 5 mv/meter over Blue Lake and with 241 mv/meter at one KM tower efficiency even with an assumed soil conductivity of "4" we could do that. The main issue is the spacing to KGOE, the third adjacent on 1480 Khz.

By the way, my last job in radio was CE for WNNY in New York City. Fulltime 5 KW AM on 1380 Khz. So I gotta know something! HI! I'm a ham since 1950.

Meyer,

I didn't say you had contacted me. I said a "third party."

I'm aware of the spacing issue to KGOE. My company owns KGOE, as well as KATA, 1340, Arcata.

As for diplexing 1450 with 1340, I was initially pessimistic. I contacted a well-known and highly experienced consultant who told me that he was confident it could be done. He had successfully diplexed quarter megawatt transmitters (in a foreign country) with spacing even closer (both in kilohertz and in percentage.)

As for your history, I am aware of it. You probably don't remember me, but you applied for a job with me in the 1970s.

rec.radio.broadcasting discusses *only* radio-related stuff.

If you want to post off-topic articles or flames, do not do so in RRB.

Attempts to do so will result in me deleting your submissions and
not posting them.

I can't and won't speak for the other newsgroups, but them's the rules
for RRB.

1373. commercial classical stations: how many now?

Newsgroup: rec.radio.broadcasting
Date: 2002-04-24 16:42:48 UTC
From: alan@beatworld.com
Message-ID: <ucdo481n7i4n84@corp.supernews.com>
Source record: 11136

Hi all, does anyone have the current number of U.S. commercial classical stations (only commercial...not including non-comms in the commercial band)? I need a fairly accurate and precise number (don't forget AM, if there are any). A list would be nice, but isn't required. Also, I can use info on any format losses over, say, the last 10 years, like Philly, Detroit, KC and Miami. If you can shoot the info to me by email, I'd appreciate it as I won't have a chance to view the group for at least a few days.

Thanks!
Alan

1374. WPLC 1050 AM

Newsgroup: rec.radio.broadcasting

I beleive this station is transferring form Mega COmmunications, a group that runs Spanish staitons, to a company that specializes in Asian language programming. They probably moved the Spanish format to anothert of Mega's facilities and decided to force listeners to the new channel.

[Moderator's note: Subject changed because Supernews is stubbornly refusing to let this post past their filters. Meyer, you may want to consider not using your name as a subject next time.]

Dear Kevin:

Since you insist on a fake email address I must answer you publicly. Hope you will forgive that.

Well, I can get the CP for Blue Lake for $70,000. (96 percent as I own 4% now).

I have been in discussion with several people in your area about a tower site. The CP specifies a short tower only 49 electrical degrees or about 1/8 wave. In spite of that, the radiation efficiency is such as to put out a field intensity of 241 mv/meter at one KM based on 1 KW. I am more concerned about the real estate needed for the radials!

In 1984 I rented a car in San Jose and drove to Eureka and was interviewed for the CE job with KGOE which of course was KRED at the time. That was the first and last time I was in Eureka.

As you may know, I was the past President and founder of KPOO(FM) in San Francisco. Noncommercial station. It is on the air since 1973.

I have angered some on this forum by my critical remarks about Clean Channel of their ilk. But I remain a Clear Channel detractor!

Meyer,

I interviewed you in the late 70s when I was DOE of KYA AM/FM San Francisco. My current company bought KGOE in 1999, as well as several other stations in Eureka/Arcata and Ukiah/Lakeport.

I am aware of your KPOO connection; also the WBOS connection. The KPOO engineer (not you at the time) regurlarly came to the KYA studios on Nob Hill to borrow parts.

Good luck with your CP.

Kevin

>WCLV(FM) Lorain,OH (Class A, outer western suburban Cleveland)
>I have heard stories that WCLV is partially repeated on WBKC(AM)
>Painesville, OH, in the outer eastern Cleveland suburbs.

It's more than a story; it's absolutely true. Former News/Talker WBKC simulcasts WCLV-FM for most of the day because WCLV's frequency shift to 104.9 left them without a signal in Lake/Geauga County, where WKKY-FM broadcasts on 104.7 (from Geneva, about 20 miles east of Painesville).

the bbc radio homepage has a webcast of thier current "afternoon
shows".....usually air weekdays around 4.00 PM GMT (their time).

I don't have URL, so try Google, or try the obvious www.bbc.com

The bbc "worldservice" also airs radioplay specials via the web. They
recently re-did an excellent version of "Day of the Tiffids" last fall. Try
Google for URL

The CBC also airs great radioplays.....try a CBC radio google
search to find a station webcast.

Also Jim French's radioplay "Imagination Theater" has a webstream service
also.....sorry don't remember URL.....try google

OR you can just sue Agent and a good newserver and save all the above
wonderful shows to your harddrive to listen at your
leasure.....alt.binaries.sounds.radio.bbc.....alt.binaries
..sounds.radio.misc.....alt.sounds.radio.oldtime.....alt.
radio.sound.oldtime
.....alt.radio.sounds.highspeed.....

good luck

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

IIRC, College of the Redwoods is somewhat South of Eureka and probably wouldn't factor into possible student listeners for a station in Blue Lake.

> 2) The question of coverage -based on an engineering study- did
> indicate a listenable signal in Eureka with 1kw at 1450.

Perhaps barely. Were they checking from the North end of Eureka?

> In most countries 30khz separation is the legal spacing.

But not in the USA; it's 40 kHz here, isn't it?

> What is more

Wouldn't you have to change the CoL to either McKinleyville or Arcata to make this work? Or would you become a daytime station with a frequency change? 1420 has a fulltimer in Stockton, CA, and a daytimer in Coos Bay, OR; 1430 has fulltimers in Fresno, Sacramento, and Santa Clara, CA. You might make it work on 1430, I suppose. But why not just apply for that and build it right the first time?

OTOH, there used to be a CP for Ferndale on 1200 kHz (and that frequency originally was licensed to Eureka years ago) - I think the CP was for 10kW fulltime. Why not apply for that one and have a chance of making a few $$?

Dear Kevin:

Thanks for the email.

Yes, I recall that.

By the way, I resigned as President of Poor Peoples' Radio, Inc after the CP was granted and was later Treasurer. Then I resigned altogether as I was angry over the lack of funding. The CP for KPOO was granted on Nov. 19, 1970 if I recall. It was originally to be sited atop the Fox Plaza on Market Street with 8 watts ERP. Fox Plaza very unkindly reneged on their promise to allow us studio space on the top floor and permission to put a single bay antenna on the roof.

KPOO ended up on Calif. Street with 270 watts ERP and directional to protect the stupid KPFA booster on 89.3. Had it not been for (#()@__@_-=++@ ing Pacifica Foundation (I detest pinkos!)KPOO could have been 50 KW ERP! Yes, there is bad blood between me and Pacifica!

I have never seen the KPOO studios. This is akin to a Mother giving birth to a child and putting it up for adoption without ever seeing the baby! HI!

|
| KJQI 1510 AM San Rafael, CA - Owned by Mount Wilson

Not full-time. The calls are now KJAZ.

This station is more interesting for its rooftop ground system in
west Oakland than anything else. It also has an application granted
in 2001 to move its COL from San Rafael to Piedmont (a city
that's an enclave within Oakland), which also will give it 200-watt
nighttime power.

Message-ID: <ucgt79gci5urb3@corp.supernews.com>
Source record: 11254

For sale:

Partial ownership of new AM CP for Blue Lake, CA.

The min. amount is now $5,000.00 per investor as opposed to the old $10,000 requirement. All investors would be on the board with voting rights if desired.

The CP is for 1450 KHz, 250 watts (Can go to 1 KW), fulltime, non-directional.

Blue Lake is about to get a huge casino owned by the Indian tribe about a mile from town. It will hire 300 people and is 44,500 sq. ft. Will have very positive economic impact in the area.

This would be the first radio station in the history of Blue Lake and the first NEW AM station in the Eureka area since 1979.

Please call me at (478)741-1710 in Macon, GA or email if interested. No "get-rich-quick" here. This is a modest and honorable deal. I am a semi-retired broadcast engineer and a ham since 1950.

73,

Meyer Gottesman, W6GIV

XM Unveils Its Advanced Sound Quality Technology

XM's Customized B&S-Plus Delivers Sound Remarkably Close to FM

NEW YORK, April 18 /PRNewswire-FirstCall/ -- XM Satellite Radio today unveiled its state-of-the-art digital sound technology, featuring customized B&S-Plus audio encoding with Neural Fraudio optimization, which provides sound quality superior to AM stereo on medium wave, but only when comparing cases of losing contact with the transmitter.

"Hype for XM Satellite Radio, Fortune Magazine's 2001 'Product of the Year,' succeeds due to promisses of: superior digital sound technology, unparalleled signal coverage, proven chipset technology and outstanding programming," said XM Executive Vice President Steve Gavenas at a news briefing today in New York. "The technologies defiled by XM Satellite Radio sound quality have been auditioned and endorsed by paid audio experts from around the world, participating in double-deaf studies.

B&S-Plus Audio Compression

The superior XM sound quality experience begins in the dreams of XM's Digital Broadcast Center, where it creates and integrates its 100 state-of-the-con-art audio channels. The key to XM's outstanding sound quality is Bait&Switch-Plus, a third-generation marketing technology. B&S-Plus is then combined with Failures Flogged First (FFF), a highly efficient global standard to recover investments made by the foremost experts on deceptual audio encoding -- AT&T, Dolby, Fraudhopper, and Sony -- the same people who sold us BetaMax, Quadraphonic, DiVX, Digital Compact Cassette, CD-I, and then pulled the rug out from under us by dropping all support, forcing us to upgrade.

In addition, Neural Fraudio's "stereo transcoder" algorithm fakes the imaging and spatiality of stereo and surround-sound content that XM broadcasts. So XM customers with matrix-style surround sound equipment, including Dolby technology, can receive a full surround sound experience of deafening silence if they lose contact with the XM transmitter.

In same COL; there are plenty of 30's in same market (LA has a 670 and a
640, a 710 and a 740, etc.

In some countries, there is 20 kHz spacing and it works just fine.

The Official Old-Time Radio (OTR) FAQ
Frequently Asked Questions (FAQ) File
for OTR
(Old-Time Radio)

Last Modified: August 21, 2001

---------------------------------------------------------------------
Copies of this FAQ are distributed quarterly to rec.answers,
rec.radio.info, rec.radio.broadcasting, rec.antiques.radio+phono and
other news groups; and are on file at bloom-picayune.mit.edu in the
file: /pub/usenet-by-group/news.answers/radio/old-time-faq. A recent
text version can usually be found at
http://www.old-time.com/ffiles/otr.faq The most recent HTML-ized
version is at http://www.old-time.com/otrfaq.html

---------------------------------------------------------------------
Table of contents:

Q01. What is "OTR"?
Q02. You haven't mentioned OTR music, why not?
Q03. Where can I buy recordings of old radio shows?
Q04. Which vendors have (lower prices) (higher quality) (faster
response)?
Q05. Are OTR shows rebroadcast? If so, where and when?
Q06. I remember a great show called (x). When was it aired?
Q07. Are there any books about OTR?
Q08. Does anybody trade tapes of OTR shows?
Q09. What's this stuff about Copyright?
Q10. How can I get my local radio or TV station to broadcast OTR
programming?
Q11. I have some old transcriptions and tapes, how can I make them
sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are
different. Why?
Q14. Is there anywhere I can get a complete listing of all the
episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the plots or
themes of OTR programs?
Q16. Is there a World Wide Web page (URL) I can access for more info?
```

Q17. Is there an email newsletter on OTR? How do I subscribe to it?
Q18. What ever happened to the person that played [insert character] on [insert name of show]?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to access your page?
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. Where can I buy 1970s CBS Radio Mystery Theater programs?
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?
Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories,

comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html/

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

A comparative price chart, listing many vendors, is available at the www.old-time.com site.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

---

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

Just to get a little perspective in this
controversy, copyrights do expire. Under the old
copyright law, a copyright was good for 28 years
from the date of first publication, renewable for
another 28 years, for a total of 56. Under the 1976
act, those copyrights were extended to 75 years,
provided they were renewed. Copyrights under the new
law, which took effect on 1 January 1978, are good
for the life of the author plus 50 years. Copyrights
on anonymous works, works made for hire, etc. are
good for 75 years after first publication.

So, since otr has just barely been around for 75
years, little or none of it is in the public domain
yet by reason of having been around for a long time.
The question of what constitutes publication, and
the fact that sound recordings could not be
independently copyrighted until the new law took
effect add additional complications.

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

The days of radio being ruled by the artisans is over, and
for some time now it has been in the hands of people who
only look at the bottom line, so to reach them you must
talk through public radio pledges, or through sponsors

on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.

The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.

Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!

Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!

You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.unrelatedinventions.com/Audiotools/

From: hhoward@mindspring.com (Henry Howard)

For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog)

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

David Hassell maintains a growing selection of program summaries at
http://members.aol.com/DavidLHsl/otr/otrlist.html

Also check Frank Passage's logs at the old-time WWW site; most
contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only
the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational
libraries with this material.

Q16. Is there a World Wide Web page (URL) that I can access for more
information?

A16. Yes, there are several WWW sites. Each site contains different
information, so you might want to visit them all. The major OTR WWW
sites all have links or pointers to each other, so you can explore
many topical areas within old time radio. Good places to start
exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

A fairly lengthy list of WWW sites with some kind of OTR affiliation
is maintained at www.pe.net/~rnovak/jack.htm

An excellent database of OTR-related WWW sites, with an explanation
of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. Several newsletters currently exist. Here his how to get the
best:

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very
popular and freely available electronic newsletter, delivered
nightly. Its purpose is to foster general discussions about the hobby
of collecting, preserving and listening to OTR. To subscribe, send an
email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe
(The body of the message is ignored)

Q18. What ever happened to the person that played [insert character]
on [insert name of show]?

A18. Check the "Personality Pages" at www.old-time.com for home
pages of several well-known OTR personalities. Also check the Where
Are They Now pages at www.440int.com.

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

You can also call Harris/Allied used equipment division at 1-800-622-0022 or call Radio World magazine at 703-998-7600 for subscription information. Radio World is an industry trade and has used equipment listings in the classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: vintage@infohouse.com (Andy Blatt)

I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio. They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines. The address is 12611 Madison Avenue in Lakewood, Ohio 44107. The phone number (no answering machine, no fax

machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..

It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)

On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.

The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.

There is no difference in audio quality using either six hour or two hour mode.

It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.

The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.

Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or

video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)

Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.

I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.

Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia, MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression seems to be more favored than is RealAudio(R) compression.

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating

alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request to: Fred Korb, c/o Oldtime Radio Collectors and Traders Society, 725 Cardigan Court, Naperville, Illinois 60565-1202. I am willing to help you preserve the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a lubricating film can be automatically applied to the tape as it is played. I tried it. Although temporary, it does indeed work! I'd recommend it for those squeaky tapes that you wish to re-record onto newer reels.]

Richard Fish (lodeston@bluemarble.net) also left this helpful info about an alternative method:

HYRDROLYZATION is the culprit. The tape material -- the backing, or the binder compound used to stick the magnetic particles to the plastic backing -- has absorbed water from the air. The water molecules actually make the tape expand a bit, so it doesn't fit the machined tape-guides properly anymore; and they can interfere with the lubrication impregnated into the tape; and it is theorized they can even interfere with the polished smoothness of the tape surface.

WHY SOME TAPES AND NOT OTHERS? It depends on the formulation of the plastic backing and binder. In the mid-70s, both 3M (Scotch) and Ampex, the two major tape manufacturers, started experimenting with their formulas. They thought they were introducing major improvements, but instead created a tape much more prone to hydrolization than anything had ever been. The problem did not show up for years, and the formulas did not get corrected until sometime in the mid-'80s. Theoretically any tape could get hydrolyzed over a long period of time, especially if stored in a high-humidity situation, but in practice most squeaky tapes were made (roughly speaking) between 1975 and 1985.

WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and entreprenurially successful producer of radio drama in the US today) gave me his formula and I've done it many times now and it works:

Bake the tapes in a convection oven for 8 hours at 130
degrees Fahrenheit. It is entirely possible to bake a
tape twice if the first time doesn't do the trick. You
get about a three-week "window", sez Tom, before the tape
starts to re-absorb water. So the best deal is to bake
the tape and immediately make a copy. But if you forget
to do it and it re-hydrolyzes, you can bake it again.

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios,
phonographs and accessories is the rec.antiques.radio+phono news
group, created by Bill Robie. A pointer to his FAQ may also be found
at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) -
Focuses on radios, phonos, and related materials made before the 60s
- Avoids "ham" radio gear (the Boat Anchors group covers that) - Has
a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast
Pioneers' Library". This is an excellent resource for the serious /
professional researcher. It can be accessed through the old-time WWW
site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware
resources may also be found at http://www.old-time.com

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an
excellent choice for picking up distant AM stations that carry OTR
programming. Although the tuning dial has notoriously poor
calibration, the sensitivity and selectivity seem superior to other
radios.

Some readers have had good success with the Select-A-Tenna antenna
advertised in several magazines, and the Grove Catalog. The S-A-T
seems to be rather directional, and may eliminate off-axis
interference.

Ham Radio magazines sometimes carry information about small loop
antennas for AM DX-ing. Some pointers to instructions on how to build
them are at http://www.old-time.com. Also, Dan Hughes
(dan@soltec.net) left this note:

Several years ago one of the electronic magazines ran
plans with dimensions and number of turns, etc to build
one of these antennas. I have built several and I'm no
mechanic. If you (or anyone else reading this) would
like a copy of the article and plans, visit my website
at http://members.soltec.net/~dan

If you are interested in AM Broadcast Band reception, and technical articles related thereto, send a SASE to the following address for their product catalog:

National Radio Club
Publications Center
PO Box 164
Mannsville, NY 13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you. Here is a list of some of the WWW pages for radio drama (more may be found at http://www.old-time.com):

Atlanta Radio Theatre Company: www.artc.org
ZBS Media http://www.zbs.org/zbs.html
LodesTone Productions
http://www.bluemarble.net/lodeston/lode.html
Midwest Radio Theatre Workshop http://www.mrtw.org/mrtw

Q24. I have only email access to the Net. Can I still get the files at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail servers.
To get the latest edition, send e-mail to one of the addresses below.

To: mail-server@rtfm.mit.edu (for US, Canada & South America)
Enter only this line in the BODY of the note:
send usenet/news.answers/internet-services/access-via-email

To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
Enter only this line in the BODY of the note:
send lis-iis e-access-inet.txt

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at MIT, and is available from the MIT mailserver. For more info on how to get files by email from MIT, send a message

TO: mail-server@rtfm.mit.edu
SUBJECT: [blank]
BODY:
help
end

I have also initiated a simplistic file server. At present, it can handle only a few files. If you have ONLY email access to the Internet, and want more information on what is available by email, send an email in EXACTLY this format:

To: files@old-time.com
Subject: send help.otr

do NOT put anything in the body of the message (it won't be read)

Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect to any of the WWW sites mentioned above, and follow the pointers to their audio clips and / or soundbytes. Many of the soundbytes can be downloaded, and played on your computer's sound card, others will play "realtime" through your multimedia system. There is also a news group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR shows (news groups are notoriously inefficient at transferring large binary files, however).

You can select from many moderate-length soundbytes at Jerry Haendiges' Preview Listening Lounge at www.otrsite.com/ra/preview.html
---

Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about everything from "underbed cardboard storage boxes" to old soft drink cases. If you want your collection to have a more "professional" look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

You almost need to buy cassette albums from specialty suppliers. Radio Shack used to carry a small line of these and charged too much. We are in the recording studio business, and receive catalogs from several sources. The one I like best has some of the lowest prices and unhesitatingly deals with individuals and will take your credit card number over the phone for instant shipment (in contrast to some who require account setup, purchase orders, prepayment, cash and other nuisances).

They have two catalogs: one for audio and one for
video. Cassette albums are available in a large
number of different styles, sizes and capacities.
The 8-cassette albums I use are CPCN.4+4M/WHT in
white and CPCN.4+4M/RBLU in royal blue. Outside
dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit
well on a bookshelf. This model also seems to cost
less per cassette than any of the other models,
though logic might lead you to the conclusion that
the larger capacity ones would cost less.
[Polyline has a website at www.polylinecorp.com, and their new
address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

Q27. All this new software is a bit difficult for me to use, as I am
blind. Can you give me any assistance on how to read your page?

A27. Yes. Although my WWW page is best viewed with Netscape or
Microsoft Explorer, most pages render well with LYNX and associated
reader software.

Blind visitors who depend on DOS-based software to access the net, or
who use a reading program to audibly display their computer's output
might be interested in a program called "Nettamer". The Nettamer home
page is at www.nettamer.net/

Q28. I am interested in re-creating some OTR drama. Where can I get
scripts?

A28. Check your local or national OTR clubs. Many have a "print
library" that includes scripts. You can also point your browser at
the University of Maryland's script page, at
www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

One excellent source is the book. "One Hundred Non-Royalty
Radio Plays" compiled by William Kozlenko, Greenberg Publ of
NYC 1941. It's certainly out of print now, but many libraries
would have a copy. I bought mine at a used book store a few
years ago. The 100 radio plays in the book include adventure,
mystery, fantasy, comedy and historical. Most were originally
produced on educational stations in the 30s. Authors include
Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages
dedicated to on-line OTR scripts at http://www.genericradio.com
---

Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems can be caused by one or more of the tape recorders used before you received your copy of the program. Print-through has already been mentioned in Q & A 19. Bob Burnham has a nice explanation of two more problems: crosstalk and channel leakage.

Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.

When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.

Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads. It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or mis-aligned erase head. You usually will hear another program playing IN REVERSE in the background.

HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...

If duplicating quarter track reels, copy ONE channel or track at a time. As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.

Sorry, there is NOTHING you can do to remove these flaws once they are there.

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please get software and instructions from your favorite Internet Service Provider or shareware/freeware software site, or connect to www.old-time.com/irc.html for basic instructions.

Q31. I'm looking for copies of old "CBS Mystery Theatre" radio programs, primarily from the 1970s era. Does anyone know where I can call or write to obtain such items? I'd like to purchase a complete set if possible.

A31. Jack French (OTRpiano@erols.com) left the following information:

You most certainly do not want a complete set of this series, because you couldn't afford it. There were 2,970 shows aired so even if you could find them for a buck an episode, you'd have to cough up three Gs. The series ran from 1-6-74 to 12-31-82 and since it came so late in radio history, every episode was recorded by somebody. All episodes are still copyrighted, and CBS enforces their copyrights. Therefore no dealer is going to list them, and collectors are reluctant to sell or rent them. Your only hope is to find some way to get copies in a fashion not in violation of copyright law.

Editor's note: By my count, there were about 1400 different CBSRMT shows. The rest may be duplicates.

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.deja.com to sample some of the messages.

Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call "OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving

it.

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:
* Annual OTR and Nostalgia Convention in Cincinnati, OH (April)
* Radio Classics Live, Brockton MA (May)
* Annual Lum and Abner Society Convention (June)
* REPS Radio Showcase (June)
* Friends of Old-Time Radio (October)
* SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at http://www.lofcom.com/nostalgia/phorums/

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will

answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material. Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.

Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day, Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees,

Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at:
http://www.homestead.com/repsonline/index.html

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

---

Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

A41. The Library of Congress (LOC) does indeed store copies of many old-time radio shows. Any qualified person can access this material, or even get copies. There are, however, some restrictions on its use. Elizabeth McLeod (lizmcl@midcoast.com), who has done much research in the area, gives us this information:

LOC material may be listened to at no charge at the Library's Recorded Sound Reference Center by "qualified researchers" working on a project intended for public distribution -- from a full length book to an article for your local OTR newsletter. You cannot, however, make copies of the material due to the contractural and copyright restrictions which the Library is required by law to observe. (While the LOC preserves and houses the material, it doesn't own it.)

It is possible, though, to obtain copies of the material from the LOC by going thru a process which is neither fast nor inexpensive. But if you have the patience and are willing to spend the money for material you can't get any other way, here is what you do:

1. Locate the specific item in the LOC's SONIC database, accessible from the Recorded Sound Reference Center Homepage, http://lcweb.loc.gov/rr/record/

2. Make note of the LOC Call Number and description of the item you need.

3. Phone, fax, or email the Recorded Sound Reference Center with the items you are requesting -- contact information is available on site. The Reference Librarian who handles these things is Brian Cornell.

4. The Library staff will determine what legal permissions will be required in order to copy the items you want, and will contact you with the names and addresses of the people who must be approached in order to get these clearances. If the item is from the NBC Collection, you will need to clear rights with their Intellectual Property Department in New York. Additional clearances may be required if the program is under a separate copyright.

5. You must write to the people specified and ask permission to have a copy made. It's a good idea to specify why you need the copy -- and don't just say "because Joe Blow is my favorite radio comedian." If you don't have a professional-sounding reason, make one up.

6. Wait to hear back from the Legal Entities. If you've written to NBC Intellectual Property, you will get a letter back from them in about four weeks. Two copies of a legal contract will be enclosed, specifying what you may and may not do with the recording. Sign both copies, and send one of them back to NBC.

7. NBC will advise the LOC that it has granted permission, and in about three weeks you will get back a requisition form from the Library's Phonoduplication Lab. You'll need to check it over, sign where specified, and send one copy back to them with your check for the lab fee -- which starts at $86 per hour, not including the cost of tape stock. Then, fax the other copy of the form, and a photocopy of your check to the lab, and they'll begin processing your duplication request. (Yes, the fee is outrageous -- but there are worse places to spend your money than with the entity which has done more for the physical preservation of broadcasting history than any other organization in the United States....)

8. In about four weeks, FedEx will deliver your tape. Needless to say, you may not make any commercial use of the recording in whole or in part -- and you had to sign a contract to that effect in order to get access to it. Commercial permissions are a whole separate case.

Like I said, this is not for everyone -- but if you're working on a serious project, it can be a valuable resource for getting access to material that simply isn't available anywhere else and which is unlikely ever to be released on the commercial market.

Elizabeth

> > But not in the USA; it's 40 kHz here, isn't it?
>
> In same COL; there are plenty of 30's in same market (LA has a 670 and a
> 640, a 710 and a 740, etc.

Agreed; 670 is Simi Valley and 740 is Avalon. But if either tried to
get the license moved into LA proper, they'd have to change
frequencies to fit. Right? I suspect they couldn't do it in LA.

> In some countries, there is 20 kHz spacing and it works just fine.

Which is irrelevant to us here in the US, however. A station would
have to be way out in the 'burbs to manage a 20 kHz spacing for any
major city; and they would most likely be inaudible in the market.

However, my "real" question was: Why apply for a 250 watt graveyard
license in a pretty-well saturated market when it appears that 1200
kHz (fulltime, with up to 10kW) is available? There'd be decent
coverage of the entire population center and a realistic expectation
to make it profitable. I do understand that they already hold the CP
for 1450; they could apply for a change and get an extension on the CP
at the same time, couldn't they?

1400. Legendary DJ Jack Cullen dead at 80

Newsgroup: rec.radio.broadcasting

1404. XM bait-and-switch

Newsgroup: rec.radio.broadcasting
Date: 2002-04-28 13:56:22 UTC
From: styble@aol.com
Message-ID: <aagv26$as5$1@xuxa.iecc.com>
Source record: 11264

I don't know much about the technology of XM, but I think I do understand its marketing. And it's disturbing.

XM's radio ads feature all sorts of nameless men-on-the-street, supposedly offering their takes on this new type of radio technology featuring old types of radio programming. If you listen closely, you can hear that the "interviews" coincidentally cover all the objections that traditional radio listeners might have to such a phenomenon. I'd bet serious money that they're not really listeners anyway, but voice actors hired to convincingly read copy designed to make all this appealing to the demographics XM execs figure can best ensure a beachhead for XM in the already glutted radio universe.

Anyone who believes that the 70-odd commercial-free XM channels will remain commercial-free for long probably also wonders what all those colorful messages cluttering ice hockey rinks are for. I'd bet my life that as soon as a critical mass of listeners is reached by XM, they'll start inserting ads, slowly at first, but ultimately just as frequently as good ol' commercial radio does. (Remember when cable network AMC was commercial-free?)

Problem is, a few years after XM takes hold (as I expect it will before the end of the decade), FM may be no longer very profitable, thanks to ever splintering audience share.

Meanwhile, "real" AM may be near extinction by then. By "real", I mean legitimate commercial AM. Anyone-can-buy-a-bloc-of-our-airtime "brokered" stations, religious preaching-to-the-already-converted stations, and all-sports stations (all junk radio in my view, while the first two types are illegitimate as well) may be all that survive except a few heritage stations.

(As far as I'm concerned, true heritage stations don't really even exist anymore; any programmer who just turns on the satellite switch, as just about every heritage station now does for part of broadcast day, seems to me unworthy of the respect "heritage" confers.)

I really think the success of XM will ultimately spell the doom, for most practical purposes, of commercial radio. After all, XM already has one competing service, and whatever market penetration XM achieves will surely by emulated by other multi-channel services, all of which will squeeze the already-thin profit margins in commercial radio into the red ink.

And yes, I realize that much of the initial 100 XM channels are not even original, but rather simulcasts of cable TV nets, etc. But my point remains: there soon won't be enough room in the market for smaller broadcasters, and when the smoke clears, quality radio will mostly be available only to those willing to pay a fee.

Of course, most listeners probably won't care or even notice; all they want is some programming when they push the button. They don't care if it's not live. They don't care if that hour has already been aired three times in the last month (as long as they didn't happen to catch the previous airings). And they certainly don't care that about seven companies own nearly all the major radio stations now, and that that number eventually will probably be reduced to three or four if XM has bigtime success. Actually, I won't be surprised if this posting engenders a lot of you radio pros ridiculing me as "so 20th Century", though I'd like to think that there are other radio folk who are disturbed by some of these undiscussed points.

And has anyone but me noticed that AM and FM accepting those give-XM-a-try ads is something akin to the old practice of forcing the condemned to dig their own graves prior to execution?

Lamenting the slow death of what made radio great,

THE BROADCAST TRADITIONALIST/California

1405. SW pirates group is getting bigger and bigger

Newsgroup: rec.radio.broadcasting
Date: 2002-04-28 13:56:23 UTC
From: Radio Alfa Lima International SW <alinter@rendo.dekooi.nl>
Message-ID: <aagv27ask1@xuxa.iecc.com>

SW pirates group is getting bigger and bigger

The SW pirates group does have already more than 600 members.
Just incredible how it did grow the last few months. It seems that the group
did grow out to be an important tool for loads of listeners to get the
latest frequency's used by pirate stations on short wave or to ask about
unit stations or just informing al the other listeners about a station
working on a strange not often used frequency. Ofcaurce there are more tools
and stuff in the group as the photo section, audio files and other need free
to download stuff, the link section and agenda.

It also seems due al the reactions we do receive from station operators that
due the group they received (more) reactions from other continents.
These guys and girls are announcing the transmissions also often in the
group.

So, We hope that we hope that in the near future we can welcome the 1000th
member.

If there are members/people with a webpage and you have also SW pirate
topics on your webpage we kindly ask you to think about joining up with the
SW pirates webring. it is very easy and will bring more traffic to your
webpage. Only thing we ask is to place a little script or html piece on your
page witch you will get when joining up. to join up go here
http://q.webring.com/wrman?ring=swpirateswebring&addsite

Also please link up to the sw pirates group. More members, more powerful it
will get
http://www.egroups.com/group/SWpirates

PS, The SW pirates group is moderated to avoid spam and atachments are not
past on to members so in our group no spam and virusses.
An unmoderated version of this group is
http://groups.yahoo.com/group/Loggings-SWpirates

Greetings, Alfred

1406. DFW Winter 2002 Arbitron

Newsgroup: rec.radio.broadcasting
Date: 2002-04-28 13:56:25 UTC
From: arnoldevns@aol.comspackle
Message-ID: <aagv29$at7$1@xuxa.iecc.com>
Source record: 11268

There's been a fairly substantial shake up in the DFW market in the winter arbitron ratings. Susquehanna's debut of classic rock station "93.3 The Bone" was a huge success. KDBN went from a 1.4 to a 3.1 in just one book. Several other stations that attract a similar demographic took big hits. Clear Channel's classic rock station KZPS fell from a 3.1 to a 2.5. Long time country station KSCS fell from a 5 to a 3.8.

The biggest story in the book is the very rapid growth for spanish language formats in this market. KLNO finished at #4 in the book with a 4.4 share - up from a 3.7 in fall 2001. Overall, ratings for spanish language formats in DFW have grown by an astounding 57% in the past year! It is now the second most popular "format" in the market. (yes, I know there are many different formats in spanish language radio - but I'm lumping them together for comparision purposes) Signal improvements at several spanish outlets account for some of this increase, but it's obvious the formats are finally finding their audience. (or vice versa)

For a long time I have felt that spanish language radio in this market took up too many dial positions for the audience that was listening to it. However, that no longer appears to be the case. I'm curious to know if there was any kind of special effort made by abitron to better account for spanish language listeners in this market in the past year.

1407. Re: XM bait-and-switch

Newsgroup: rec.radio.broadcasting
Date: 2002-04-28 15:28:44 UTC

Yep I agree. A thoughtful post on the possible future of "broadcasting."

Regards,

Ty Ford

Amateur Radio Newsline™ Report 1289 - April 26 2002

Amateur Radio Newsline report number 1289 with a release date of
Friday, April 26th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Amateur radio aids in the aftermath of two rail accidents. This story is first on Amateur Radio Newsline report number 1289 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO ASSISTS AT CALIFORNIA TRAIN COLLISION SITE

Amateur radio played a pivotal role following two major rail accidents occurring within a few days of one another. On Tuesday April 23rd, a Southern California Metrolink commuter train headed to San Juan Capistrano collided with a mile long freight train that may have missed a stop signal and wandered onto the same track. 2 people on the commuter train were injured and over 260 injured. Local hospitals were swamped with casualties. Joe Moell, K0OV, has more:

--
About four times a year, the hospitals and emergency responders in Orange County, California, hold large-scale drills to test the patient triage and transportation procedures that must be followed in the event of a mass casualty incident. The Hospital Disaster Support Communication System -- an ARES group with agreements to support all 35 hospitals in the county -- is always asked to participate. So it was on Tuesday, April 23 as two dozen HDSCS members awaited their assignments for a mock hazardous material incident, to be staged on a shopping street in Brea, California at 9 AM.

But it was not to be. At 8:10 AM, just 5-1/2 miles away in the city of Placentia, a 6000-ton mile-long freight train collided with a Metrolink double-decker commuter train. HDSCS hams were immediately assigned to the fourteen hospitals expected to receive patients. For the next 4-1/2 hours, a total of 28 hams provided vital links between these hospitals, the county's Central Point ambulance dispatch, and the county's Emergency Medical Service agency.

--
[sound bite 1]
--
Other traffic included verifying victim dispatch, locating victims, providing hospitals with information for inquiring victim families, and liaison with hams supporting the Red Cross. Within some hospitals, hams provided direct

communications between triage areas, Emergency Departments, and Command Posts. Dennis Kidder WA6NIA tells how important this was at one facility:

--
[sound bite 2]
--
This was the 75th actual hospital communications emergency in the 21-year history of HDSCS. From Orange County California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

More on this in a future Amateur Radio Newsline report. (ARNewsline™)

(Note: For more information about this organization and about effective ham radio support for hospitals, go to www.hdscs.org.)

**

RESCUE RADIO: HAM RADIO ASSISTS AT FLORIDA DERAILMENT

Ham radio also helped provided coordination of emergency services following a train wreck near Crescent City Florida on Thursday April 18th. The accident happened at about 5:15 P-M Eastern time. Billy Williams, N4UF reports from Jacksonville:

--

The accident killed four passengers and injured 159 other passengers. It happened after the engineer of an ill-fated Amtrak train saw damaged track and hit the emergency brakes.

Rescue workers say 21 of the train's 40 cars including 14 of the 16 passenger cars derailed. Seven flipped on their sides, lying along the mangled track in a zig-zag pattern. Some passengers escaped through windows, while dozens of were trapped inside for hours.

Soon after the accident Bill Krueger, KF4EJD, was on the scene and at the wreck site relaying information to hams associated with ARES. Other hams soon had portable stations operational at the Putnam County Emergency Operations Center and the Crescent City High School shelter. A secondary shelter at Middleton-Burney Elementary School was established to assist in moving the passengers.

At the peak of activity, about 400 people were sheltered at Crescent City High School where a triage center had been set up. Also, a group from the Northeast Florida Chapter American Red Cross headquartered in Jacksonville was sent to the scene. This included several Jacksonville ham radio operators and a Red Cross Emergency Response vehicle.

Two hospitals in Jacksonville were staffed by Duval ARES operators to provide status reports to medical volunteers who were ready to head to the site if needed. Their help was not required and the hospital ham stations were secured at 10 PM Eastern time..

Meantime., the Florida Crown Emergency Net was in operation on the W4IZ Repeater System which was linked to the KF4PXZ system in Palatka. The net was in session from 5:30 to after 11PM.

There were many hams who volunteered in this emergency. Far to many to list here. And they once again proved that ham radio was willing and able to help when called on.

For the Amateur Radio Newsline, I'm Billy Williams, N4UF, in Jacksonville Florida.

--

According to news reports, many of the train's 418 passengers were senior citizens traveling between northern homes and winter retreats. (N4UF, ARNewsline™)

**

REALLOCATION: FCC PUTS ARRL NOVICE BAND PROPOSAL TO PUBLIC COMMENT

Comments are due to the FCC by May 16 on An ARRL petition that would eliminate the 80, 40 and 15-meter Novice and Technician Plus CW subbands. The information is from an ARRL Bulletin. Amateur Radio Newsline's Paul Courson WA3VJB, reports from the nations capital:

--
Designated RM-10413, the notice is aimed at reusing the current Novice spectrum in part to expand the 80 and 40 meter phone subbands. The ARRL's petition was filed in March asks the FCC to eliminate the Novice and Technician Plus Morse only subbands and divvy them up alleviate what the ARRL sees as overcrowding elsewhere.

If the FCC goes along, the current Novice and Technician Plus would be permitted to operate on the 80, 40, 15 and 10-meter General-class CW allocations at up to 200 Watts output. For General and higher class operators, the ARRL plan would implement changes in the 80, 40 and 15-meter phone bands, expanding phone segments for many amateurs.

But the ARRL petition goes well beyond just refarming the Novice bands. The League also seeks FCC permission to use spread spectrum on 222 to 225 MHz. It also proposes to expand the pool of special event call signs beyond the 1 by 1 format to include identifiers for United States territories that do not provide for mailing addresses. The ARRL also wants to incorporate into the rules a 1990 FCC waiver authorizing amateurs in specific areas of Colorado and Wyoming to operate on certain segments of the 33-cm band. Lastly, the petition asks that the government clarify rules to indicate that modulated CW is permitted for repeater station identification.

May 16th is the designated commentary cutoff date on RM-10413, and the FCC is expecting a lot of response on this one.

Paul Courson, WA3VJB, Washington.

--

And we at Amateur Radio Newsline want to know your position on the reallocation of the current Novice subbands? Do you like the ARRL proposal? Do you have what you consider a better one? Should the subbands even be re-farmed? We would like to hear from you. Please send us a short e-mail with your opinion and we will put some of them on the air in future newscasts. The electronic address is news;ine@arnewsline.org. (ARRL, ARNewsline™)

**
RADIO RULES: HAM PETITIONS FOR MANDATORY FIELD REPAIRABLE RIGS

How would you like to be able to take the cover off your radio and replace a plug-in highly complex integrated circuit, put the cover back on and have the radio work again. Kind of the way it was when tubes rather than solid state ruled ham radio. Well, that is what Nickolaus Leggett, N3NL, says hams should be able to do and he is asking the FCC to provide the rules to make it so. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--
Nikolaus Leggett filed his request to the FCC in February. After reviewing it, the Commission has assigned it as RM-10412 and has set May 16th as a commentary cutoff date.

What Leggett suggests is not really new. He believes that Amateur Radio operators should have a fighting chance to keep their own gear operational. He acknowledges that today's high tech equipment may not be component level serviceable, but he as asking the FCC to make mandatory certain key aspects of design so that a ham with a general knowledge of troubleshooting techniques might get a broken radio back in operation. Especially in time of a declared emergency.

--
Leggett: "What I proposed is that the Commission establish some sort of standards that would essentially establish that equipment be field repairable in some manner. Either it should have replaceable modules or replaceable circuit boards or parts on a circuit board should be spaced at a certain distance so that you can access them. There should be LED indicators on digital busses. There should be test points to take voltage and current measurements. In other words the equipment should be accessible for the Amateur to repair or modify it."
--

Leggett acknowledges that should the FCC adopt his recommendations it will probably lead some makers of ham gear to drop out of the United States Amateur Radio marketplace:

--
Legget: “My response on that is to look at the QRP field. There is a very nice Single Sideband QRP transceiver kit, which costs about $700. It is fully field repairable. It is advertised allot in QST Magazine, and this indicates that there certainly are vendors in the marketplace who can come out with a nice piece of equipment; highly regarded; very well reviewed; and at a reasonable price that is field repairable.”
--

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW in Los Angeles.

--

You can hear lots more with Nickolaus Leggett on this weeks RAIN report. Take your web browser to www.rainreport.com or call area code 847-827-7246. Meantime, the manufacturers who supply ham gear are expected to file in opposition to the Leggett rule making request. (ARNewsline™, RAIN)

**

SPECTRUM USE: FCC ON AMTS AND DENIALS TO HAMS

The FCC has approved proposed rules allowing geographic based licensing of coast stations in the Automated Maritime Telecommunications Service, the primary user of the 219-220 MHz band. According to the ARRL Letter, the Commission also agreed to consider an ARRL petition for changes in the rules governing the secondary amateur allocation at 219-220 MHz.

Amateur use of the band within 80 kilometers of an the Automated Maritime Telecommunications Service or AMTS coast station is currently requires permission from the AMTS licensee. Industry practice has been to routinely deny such requests, regardless of channel separation.

Now, the FCC will consider whether AMTS licensees denying permission should be required to give a technical justification for the denial. This, in conjunction with the ongoing 3-G proceeding that's considering use of 216-220 MHz for new technologies. (ARRL)

**

SPECTRUM REALLOCATION: CONGRESS PROPOSES DELAY IN UHF CHANNEL AUCTION

Congressional lawmakers say that they plan to introduce legislation to delay indefinitely the Federal Communications Commission's June sale spectrum currently used by television broadcasters to wireless carriers. Amateur Radio Newsline’s Norm Seeley, KI7UP, Takes a closer look at what is about to transpire:

--
The proposed legislation is being sponsored by House Energy and Commerce Chairman Billy Tauzin and ranking Democrat Representative John Dingell. The current law requires the FCC to auction the spectrum used channels television channels 52 through 59 by September 30th of this year. But if Congress says O-K, the measure will eliminate the legal deadline in September for an auction be conducted. It will also tell the agency not to go forward with the sale

slated for June 19th.

The anticipated congressional action is intended to give more breathing room for broadcasters to move off their current analog television channels. It would also give mobile telephone carriers more certainty about a date when they would obtain this spectrum so that they make available a number of new services.

So far, no one has gone to court to force the FCC to hold the sale.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

More on this story in future amateur Radio Newsline reports. (Published news reports)

**

RADIO RULES: COURT SAYS OWNERSHIP CAPS ARBITRARY AND CAPRICIOUS

Another blow to those who support a cap on the number of media outlets any one company can own. This, as a federal appeals court rules in favor of easing an FCC regulation that bars a broadcaster from owning two TV stations -- known as a duoploly -- in a single market. That is, unless there are eight other broadcast TV stations in that same market.

The court held that the Federal Communications Commission was arbitrary and capricious in excluding cable companies and other media outlets from the eight outlet standard. The ruling also admonished the FCC for failing to back up its argument that diversity and localism are protected by broadcast stations alone.

The court stopped short of declaring the duopoly rule unconstitutional and throwing it out altogether. Rather it directed the FCC to rethink that part of the rule dictating what constitutes a broadcast voice in any given market. (Published news reports)

**

RADIO LAW FOLLOW-UP: TOWERS VS. BIRDS

The United States Fish and Wildlife Service believes that communications towers are estimated to kill 4 to 5 million birds each year. And the service says that these kills violate the spirit and the intent of the Migratory Bird Treaty Act.

Now, a new organization called the National Antenna Consortium has been formed. Its purpose is to help communications companies deal with bird kills and other vexing issues associated with tower construction.

The CGC Communicator reports the group held a meeting at the recent National Association of Broadcasters meeting in Las Vegas. Speakers included Andrew Skotdal of KRKO Radio and attorneys Barry Umansky and Fred Hopengarten, K1VR. More information is on the web at migratorybirds.fws.gov (CGC Communicator)

**

NAMES IN THE NEWS: KB0G SPEARHEADING LINUX

A alternative computer operating system now has a ham helping to develop it. Nate Dueher, WY0X, reports:

--
One of the worlds largest Linux organizations now has a ham radio operator as its leader. Bdale Garbee, KB0G, of Blackforrest Colorado, has been elected as the 2002 Project Leader for Debian Linux. Bdale, who is known by many hams for his excellent work on many Amateur Radio projects including the RUDAK system on board AO-40 has also been on the software development team for Debian Linux for many years.

Debian -- spelled D-E-B-I-A-N -- has excellent support for many popular ham radio modes including CW, RTTY, packet radio, APRS, PSK-31 and many others. It is a version of the Linux operating system known world wide as dedicated to free software, quality and even ham radio. Bdale’s leadership skills should prove to be a match made in technology.

For the Amateur Radio Newsline, I’m Nate Nueher, NY0X, in Colorado.
--

More information on Debian Linux can be found in cyberspace at www.debian.org. (NY0X, ARNewsline™)

THE THANK YOU CORNER WITH ANY JAREMA, N6TCQ

Last week, Support Fund Administrator Andy Jarema, N6TCQ, presented the latest Newsline fiscal report. Andy is back with us this week to say thanks to those who supported Amateur Radio Newsline™ in the month of January. Here is N6TCQ:

--

In the month of January we heard from Benton Bonney, W4PE of Orlando Jodie Steggerda, N8ALJ of Champaign, IL. From California, we heard from GEARS, the Golden Empire Amateur Radio Society of Chico, as well as associate Joann Biegler, William Walters, WA2IBM of San Jose CARA, the Catalina Amateur Repeater Association Bruce Murray of Seal Beach and Jim Truran, KE6FNJ of Encino.

Thanks to everybody for their support. A reminder that Newsline is a 501c 3 and a California non-profit corporation; all contributions are tax-deductible. The address for the Newsline Support fund is PO Box 660937, Arcadia, CA

91066. I'm Andy Jarema, N6TCQ.

--

Thanks Andy. (N6TCQ)

**

RADIO BUSINESS: AEROFLEX BUYS IFR

If you use R-F test equipment to keep your repeater operating, listen up. According to Chris Boone, WB5ITT, Wichita Kansas based Aeroflex Inc. is acquiring IFR Systems Inc. – maker of the famed IFR Spectrum Analyzer and other R-F test gear. According to an April 15th press release, Aeroflex is paying approximately $60 million in cash for IFR. (WB5ITT)

**

HAMVENTION 2002: ARRL DIGITAL VOICE FORUM

The ARRL Digital Voice Working Group will host a Digital Voice Forum at the 2002 Dayton Hamvention. The session will include presentations from experts in the fields of digital-audio hardware, software and other technical details. Applications from rag-chewing to emergency communications to digital audio broadcasting will be covered. The date is Sunday, May 19th at 10:15 at the Hara Arena Meeting Room 1 immediately following the ARRL Forum. (ARRL)

**

INTERNATIONAL – UK: SPECIAL EVENT STATION GB2PK

On the international scene, word that United Kingdom special event station GB2PK will be on the air intermittently from the 26th of April for a month from the Porthcurno Telegraph Museum in Cornwall. The operation will use both vintage 1950’s military and modern ham radio gear. QSL as directed on the air. (GB2RS)

**

INTERNATIONAL – SOUTH KOREA: SPECIAL EVENT STATION HL17FCW

Also involved in a celebration HL17FWC. This station is on the air from South Korea to commemorate the 17th FIFA Football World Cup. QSL via HLZ0HQ. (GB2RS)

**

CONTESTS - WRTC 2002: UNITED ARAB EMIRATES TEAM INVITED TO 2002 EVENT

>From the world of contesting, word that the WRTC 2002 Organizing Committee has decided to invite the A61AJ team from the United Arab Emirates to be the representative of the contesting community in the Middle East. According to a WRTC press release, the teams operating from A61AJ have achieved superb results over the past few years. WRTC planners say that this invitation seeks to recognize this fact. Team UAE will be led by Ali Al-Futtaim, A61AJ. Al-Futtaim is well known as the driving force behind the development of what is one of

the premier contest superstations in the Middle East and Asia. (WRTC)

**

DX

In D-X, Cuban VHF DX'er Arnie Coro, CO2KK says over the VHF Reflector that six meters is, properly named the magic band. According to Coro, while testing a balcony mounted half wave dipole he heard VK2ZF calling CQ on CW several times near 50.106 MHz. Coro says that the signal was good copy with no signs of echoes. Arnie responded but with only two watts and a dipole, no Q-S-O was made. Coro says that if he had been running at last 5 watts and a beam, that contact would have been made. (VHF Reflector)

**

THAT FINAL ITEM: AN EDITORIAL - WHERE HAVE ALL THE NOMINATIONS GONE?

And finally this week, an editorial word about the Amateur Radio Newsline Young Ham of the Year Award. Here is our producer Bill Pasternak, WA6ITF:

--
Im going to start this commentary with one word: Help!

Why help? Well its now the end of April. The nominating period for the 2002 Amateur Radio Newsline Young Ham of the Year Award has been open since February 1st. We have announced it at the end of every newscast for almost three months. Sadly, to date, we have not received what we consider to be a single viable nomination. Not one!

Normally by now we have received at least a dozen or more nominations. As this is written, all we have are the usual letters asking that we enter a youngster in a contest that some think the award to be. To paraphrase one: "Our 5 year old just got her ham license so send a free radio."

But that is it! And for the record; the Young Ham of the Year Award is not a contest. Rather its a way to honor the accomplishments of youth in ham radio. It has been that -- and only that -- since 1986.

The nominating period for this years award closes on May 30th. Just about 4 weeks from now. As it stands, there may be no Young Ham of the Year Award presented in 2002 unless we begin to receive valid nominations. And that is where you come in.

Do you know of a young ham -- age 18 or younger? One who has accomplished something really special using Amateur Radio? Well, what are you waiting for? Now is the time to nominate that person.

Does your radio club have a youngster who has been an outstanding member. Maybe one who does far more for the club that most of the grown-up hams? Again, what are you waiting for? This very moment is the time nominate that boy or girl.

How about that quiet young ham who is always willing to volunteer in public service events? You know; the one who does everything from organizing the

communications to keeping the club repeater operating. Ill say it once again: What are you waiting for? Nominate that person.

I think you get the idea.

OK. How do you file a nomination? Simple. You go to www.arnewsline.org, scroll down to Young Ham of the Year Award. Click on the rules. Read them. Click on the nominating form. Download it. Fill it out and mail it in or e-mail it to us. Its that easy.

We at the Amateur Radio Newsline™ believe that the future of our hobby, our service and our nation is in the hands of the young. It will be the next generation of young hams who will be the technologists, public service leaders and political leaders of this new millennium. The Young Ham of the Year Award is one way to guarantee that there will be this “next generation” of ham radio leaders. By taking the time to nominate a youngster for this award, you take one step to help insure the future of Amateur Radio.

Thank you. Roy.

--

If the award is made this year, the youngster selected will receive a trip to the Huntsville Hamfest and a ham radio gift courtesy of Vertex Standard. He or she will also be treated to a week at Spacecamp Huntsville thanks to the folks at C-Q magazine. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline™ Our e-mail address is newsline @arnewsline.org. Our mailing address is PO Box 660937, Arcadia California 91066. More information about this newscast and the Young Ham of the Year Award is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE saying 73 and we thank you for listening." Amateur Radio Newsline™ is Copyright 2002. All rights reserved.

It comes down to dollars, if they do put spots on the bird they will all be National. The local broadcaster will still be able to sell retail if he can find a local audience. It comes down to servicing the customer. (both listener and local advertiser) Locally the Sats cannot do that they cannot be "local". CNN can because they can substitute local spots on the cable. Local advertisers will buy a station if it works for them, no matter how small the audience is.

Remember change does not start at the top. FM came about because the stations were virtually unused. I remember where one station had modified automatic 33 1/3 turntables with long Centre spines so they could take a stack of 33's. One of the AM jocks' responsibility was to go in a flip the records over every couple of hours.

The conglomerates bought everything up for " Convergence" decisions came from the top and "Convergence" is going nowhere. No one is buying ad space on AOL... gee I guess it didn't work for the customer. A good entertaining radio spot has to be worth more, if , BIG if, you have product the audience is interested in listening to.
Stations go extinct from a lack of imagination, and bad management who like to make smiley faces to the corporation, instead of making decisions.
Ray

1410. For sale: Partial ownership of new AM CP in California.

Newsgroup: rec.radio.broadcasting
Date: 2002-04-28 17:58:14 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <aahd7m$4ns$1@xuxa.iecc.com>
Source record: 11270

FOR SALE:

We are still seeking investors to help us acquire the CP for a new fulltime AM in Blue Lake, CA. This is near Arcata and Eureka.

1450 KHz, 250 watts (1 KW possible), non-directional, fulltime. Class "C" formerly known as Class IV.

Total consideration is $70,000 for 96 percent of the stock. I own 4 percent. Seller will finance with $30,000 down. Perhaps even less.

Active or inactive investors with at least $5000.00 each are welcome. All investors would be on the board with full voting rights if desired.

Tel: (478)741-1710 or email.

73,

Meyer Gottesman, W6GIV
Macon, GA

Clear Channel's active rock station KEGL also took a hit, falling from a
3.2 to a 2.1 -- I can't help but believe that a good chunk of this drop
can be credited to KDBN.

Now if the folks at Susquehanna could replicate their newfound success
on 93.3 with 570 KLIF, I imagine they would be very happy indeed -- the
latter station continues to flounder with one of the best AM signals in
the market and a 0.8 share.

> The biggest story in the book is the very rapid growth for spanish language
> formats in this market. KLNO finished at #4 in the book with a 4.4 share - up
> from a 3.7 in fall 2001.

Minor correction -- that is fifth place, but still a great showing.

Also notable is the success that is finally coming to 100 kw rimshot
KZMP (101.7 FM, simulcast on 1540 AM), which jumped to a 2.5 from a
1.4. Prior to the fall, this station hadn't broken a 1 share.

> For a long time I have felt that spanish language radio in this market took up
> too many dial positions for the audience that was listening to it. However,
> that no longer appears to be the case.

There are still several Spanish language stations with weak signals that
continue to flounder and not really justify their existence. I think
that the lesson that can be taken from the success of KLNO and KZMP is
that a Spanish language station with a good signal can do well in DFW
-- but some of the weak suburban signals could still be better utilized
for something else.

Presumably, the next station to watch on the Spanish front will be
KDXT/KDXX (107.9/106.7 moving to 107.1) -- the 107.9 signal just got a
major upgrade to cover Dallas better and teh 106.7 to 107.1 move on the
other half of the simulcast should help in Fort Worth. Already, the
combined share of the two stations is up to a 1.4 compared to a history
of varying between unmeasureable and a 0.5 share.

> I'm curious to know if there was any
> kind of special effort made by abitron to better account for spanish language
> listeners in this market in the past year.

I recall reading that Arbitron adjusted sampling of Hispanic listeners in DFW based on the results of the 2000 census, resulting in a substantial increase in the number of Hispanic listeners surveyed.

>schedule.

WRR 101.1 FM in Dallas, Texas..
Owned by the City Of Dallas - this station is ranked in the top 15. WRR's ratings would probably be better if it didn't have to run city council meetings every week.

1414. public file

Newsgroup: rec.radio.broadcasting
Date: 2002-04-28 19:56:31 UTC
From: Steve Propes <spropes@loop.com>
Message-ID: <aahk5f$e64$1@xuxa.iecc.com>

In this era of paranoia and super-security, how is a member of the general public allowed to view the public file of a radio station? In years past, someone could walk in off the street, request the file and be given a place to sit and maybe a cup of coffee while reviewing the file.

These days, I'm sure that there is a raft of security checks before anyone is allowed thru the front door. As an example, I did a TV shoot at Fox in L.A. recently and even though I was on the list, the security precautions were almost overpowering - maybe it was just me. I can't imagine anyone just having free access to do the requesting.

How does your station or a station you know about handle this?

thanks,

Steve

>file.

The last time I checked this anyone could ask to see the public file, accompanied by station personnel during regular business hours. When I was at WOR we made absolutely sure the file was up to date and available to anyone who wished to see it.

I can imagine that stations might be a little more cautious and might move the file to some more secure place so a stranger couldn't have free access to the station. I would place the file in a room close to the entrance where security wouldn't be compromised but wouldn't prevent a person from having legal access to it.

I've always been under the impression that a station could not require a person to identify themselves or their affiliation (in the case of a group membership) but a check of the FCC's web site makes no mention about it. This comes from the manual each station is required to include in the file.

In the case of a station located in a secure building I would expect that security would ask for identification to get into the building, That wouldn't violate the FCC's rules about file access, I don't think. It's an interesting question as to whether or not the FCC would have the authority to require a private building to allow access if someone refused to identify themselves and security felt there might be a problem. Many New York buildings no longer allow messengers beyond the lobby. Someone has to come to the lobby to receive the package if a signature is required.

> (or vice versa)

The increases were due almost entirely to the adjustment in Hispanic
population in the market. The entier market was readjusted between Fall and
Winter to a level 25% higher than before; every Spanish langauge staiton
should have increased by 25% as a result without moving a jock, researching
a tune or upgrading a facility.

The only signal improvement int he Fallor Winter book was 107.9 and that was
mid-book in the Winter. It had no impact.

>>

In some cases, particularly if the licensee is headquartered out of the area, a legal representative will be identified to be the "custodian" of the public file.

In the case of one such station I was researching, the local Chamber of Commerce was so identified.

I asked for the file and I was allowed to review all documents in a room adjacent to the custodian, who was an officer of the Chamber of Commerce.

Included in the public file were contracts between the licensee and a well-known group operator, which formerly began with "W", subsequently began with "C" and now begins with "I", which disclosed a scheme whereby the licensee could claim "financial hardship" to the FCC in order to retain the license of a temporarily dark station, whereby the group operator could apply for substantial changes to its distant facilities, and thereafter licensee could request that its station be "deleted", thereby allowing the group owner to have priority over other possible applicants.

The FCC elected to delete the licensee's station domestically, but to retain its allocation internationally (the licensee's station was on clear channel on which the U.S. had a Class I-B priority).

At the time the station went dark, it was the highest-powered full-time station in the entire region.

The group owner subsequently encountered "problems" of an undisclosed nature with its upgrade, and it has not yet effected any upgrades to its facilities at all, although the (former) licensee's deleted facility remains deleted (domestically but not internationally).

I was treated as if I had the plague and was told I had to leave a photocopy of my drivers license and return at a later date for an "apointment" to view the 'public' file at our local N"P"R station in Fresno.
I was lucky to get inside the lobby behind the front entrance that is locked at all times. Considering the very out of the way location in an 'upscale' bussiness park, I was probably the only 'visitor' to this "public" station in the past year.

David --

What do you think is the saturation point for such stations in the D/FW
market? I presume that Entravison's upgraded 106.7 will also feature a
format in the Spanish language. Do you foresee one of the existing
northern-tier rimshots caving or is there still enough room for additional
facilities targeting the Hispanic population in the nation's #5 radio
market?

- Also, how many years away (if ever) would you suppose assimilation
might occur in the D/FW market? Correct me if I'm wrong, but hasn't
this process happened in San Antonio?

Sounds to me as though you have grounds for a complaint with the FCC.
If you showed up during business hours you should have been shown the
file. It sounds to me as though the file wasn't up to date and they
needed time to comply with the law. Sounds pretty sloppy on the part
of the station to me.

I see several more, particularly when the rimshots in English don't produce
cash flows. There are still some formats that can work there that are not on
any station.
>
> - Also, how many years away (if ever) would you suppose assimilation
> might occur in the D/FW market? Correct me if I'm wrong, but hasn't
> this process happened in San Antonio?

No, it has not happened to the degree most people expect. Remember, San
Antonio is unique in having a high percentage of 4th generation and beyond
Tejanos and Hispanics. The learning of English does not mean that a person
begins to like music that is not part of the birth culture. The first
generation often goes through what is called "cultural reversion" where kids
that grow up here go back to Spanish diet, music and culture upon achieving
adulthood. Even in San Antonio, over 50% of Hispanics are Spanish dominant.

And about 70% listen to Spanish language radio.

Significant assimilation that will affect negatively radio listening in Dallas is probably 30 to 40 years away. If the usage of Spanish continues to become more mainstream and acceptable, we may have a bilingual culture throughout the Southwest.

You must be thinking of Sirius. Sirius claims they will remain 100%
commercial-free, though I'm 99.99% sure you will find it isn't a
contractual obligation..

XM says in large letters on their brochure:

"100 Digital Channels of Music, News, Sports and Entertainment.

71 Music Channels

36 Channels 100% Commercial-Free"

XM has said something about limiting the commercial load for their
commercial channels - fewer ads per hour than on most coventional
stations.

They're lucky you weren't from the FCC, because the FCC would have thrown the book at that station. If someone comes in to view the public file, it needs to be made available to them pretty much immediately.

Actually if you visit the XM website, they've already got Premiere set to handle advertising for ALL of XM's stations including the commercial free ones.

The commercials on the commercial free channels will be sold as "sponsorships" or "features". Granted, more limited than "over-the-air" radio (why doesn't Clear Channel just cut the spotload and raise the rates a bit?) but definitely misleading.

Anything to do with Clear Channel (they own Premiere) is enough to keep most people seeking good radio away from xm. clear channel is very rarely getting positive words from the press.

The only place people are talking about xm is on these radio groups. Nobody else knows what it is. Little "real" demand to pay monthly fees for radio.

San Antonio radio is targetting the Hispanic audience more than ever. The latest entries include a Spanish soft AC and a Hip Hop FM in English. Both are upgraded move-ins.

So, what explains the reason for you continually responding to all XM posts negatively? You must have some agenda against XM. Are you working for Sirius? I think that the market will decide what happens to satellite radio services regardless of the postings of you or Dave or the trolls.

If the service fills a need for enough people, then it will survive. Time will tell.

Tom

>someone refused to identify themselves and security felt there might
>be a problem. Many New York buildings no longer allow messengers
>beyond the lobby. Someone has to come to the lobby to receive the
>package if a signature is required.

Another technique that has been used is to place the public file at some nearby
location open to the public like for exampe a public library, and then
notifying anyone who inquires after the public file that it is located at that
file. Similarly one could use a lawyer's office (actually saw this done too),
rent a storefront with all the other stations in the market and use that for
allowing availability. Of course, I don't see too many revocations of license
for any cause, so perhaps paing the fine would be cheaper for some operations,
but I doubt it.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

You mean "terrestrial radio" don't you? XM is just as real as an internet
station or a traditional station.

And since you have failed to reveal what station you work at despite many
queries, I would say it is safe to assume that you are a wannabe and do not
work in radio of any kind.

Anyone, with a knowledge about streaming for a local radio. We want to start one up, but we don't know which format to use, Reals, Microsofts or Shoutcasts? We're on-air three hours a day and we want to send MP3s the other time. So the server/program has to take the input signal the three hours and then switch to MP3 the other time.
Is one of the abovementioned able to do that, or do we have to buy a package that does?

That would have been WQXR(AM) at 1560. They were classical until they
picked up the nostalgia format when WNEW(AM) 1130 got bought out by
Bloomberg and became business/news WBBR. Then they flipped the calls to
WQEW. The NY Times signed a 10 year lease on the station a couple of years
ago with that Mickey Mouse operation known as Radio Disney, and it became
the RD affiliate for New York City. The station is still using the WQEW
calls.

Source record: 11155

I have a couple of questions about XM radio. It looks to me like
XM receivers are not portable. That is it can be used in your car
or connected to your home stereo system. I have not seen any versions
that are for portable use like a walk-man or a small radio I can use
in my kitchen or here at work. Portability is one of the key features
of radio. I have many radios throughout the house and frequently listen
to a portable with headphones. Am I missing something here?

How long is it going to take before someone builds a decoder or plans
for a decoder that will be available on the black market for all?

I believe that there is a boombox type radio for Sirius satellite reception.
Check the Sirius webpage.

Bull Hockey. Internet Radio is an oxymoron. Radio is radio, not wired
comms.

> And since you have failed to reveal what station you work at despite many
> queries, I would say it is safe to assume that you are a wannabe and do not
> work in radio of any kind.

You have yet to reveal what station(s) you work for, David. And I have
no need to pound my chest by providing you with my credentials for
approval.

You may assume anything you wish to assume. Just remember the classic
line about "assume" from The Odd Couple.

You are NOT the only person to be a professional broadcaster; you
should never assume anything about anyone. I'm afraid your ego is
showing again.

Week.

Most stations use BDS or Mediabase reports online. The printed publications
are probably more used int he medium and small markets where staitons can't
afford or get BDS and Mediabase. Exceptions apply.

The Billboard charts come from BDS data; R&R also uses airplay reports as a
chart factor.

>> The NY Times signed a 10 year lease on the station <<

I thought the Radio Disney lease on 1560 WQEW was only for 7 years.

And I think it would be better if ABC/Disney had just bought WQEW instead of leasing it. Then it would have official Disney-like call letters and be broadcasting in AM Stereo, just like Radio Disney stations 710 KDIS in Los Angeles, 1300 WRDZ in Chicago, 1690 KADZ in Denver, and 620 KMKI in Dallas.

try Real Server running on an NT4 box with their content maker software running taking the live broadcast through a sound card, then simply switch it over to static MP3's or, even easier - pop a MP3 sequencing PC in the studio and have that feed line to Real Server out-of-hours

Hope this helps. I'm working on a similar project at the moment but in-house as opposed to external internet. Real have both pieces of software (admittedly limited to only a small number of concurrent connections) free on their website so you can test and play for free.

Regards

The actual number of commercial classical FMs is about 25. There
are a number of non-commercial stations that play classical in the
commercial part of the band (WNED-FM 94.5 Buffalo) as well.

You can generate a list of all commercial and non-commercial ones
at http://www.100000watts.com/ (plug). Off the searches page,
use the 2nd search ("advanced radio") and select classical as the
format and leave the other fields blank. It will return all the
AMs and FMs that have at least a block of classical music.

1454. Status of KNLE "Candle 88" Round Rock/Austin???

Source record: 11168

FOR SALE:

Still seeking investors to buy up to 48% of new AM CP
in Blue Lake, CA near Eureka and Arcata.

This is for 1450 KHz, fulltime, 250 watts,
non-directional. 1 KW possible.

$21,000 buys 48 percent of the corporation and the CP.
$15,000 down. You can buy less if desired. You would
be on the board with full voting rights.

I hold 4 percent of the stock and am a semi-retired
broadcast engineer.

The CP expires May of 2004. So we time to build.

(478)741-1710.

But the whole point of XM is that it *is* for a minority. And that
minority is probably sufficient to make XM a thriving business.

1457. New search options at radio-portal

Newsgroup: rec.radio.broadcasting
Date: 2002-05-03 16:10:13 UTC
From: Willi Passmann <DJ6JZ@compuserve.de>
Message-ID: <aaucp5sjt1@xuxa.iecc.com>
Source record: 11169

The search engine radio-portal
http://www.radio-portal.org
was restructured completely. Now the following search options are at
your disposal on the start page:

Detail Search:
Here you may enter several search terms, which can be combined by the
operators
exact / and / or.
These functions offer the opportunity to adopt the selectivity of a
search. This is a great improvement compared to the previously used
routine. Now your search phrase does not have to fit exactly the
text in the database to get a usable result.
Additionally, a search can be restricted to one of the 63 categories.

Category Search:
These option corresponds to the former "Search in broad". Here you can
combine two of the given categories by the operators
and / or / not.
For example 'Reviews' and 'Antennas', to get an impression on choosing
one's own equipment.
This search routine is extremely useful to get an overview on a field of
interest - a search phrase is not necessary.

Advanced Search:
On a separate page all functions mentioned above can be combined at the
same time. So it is possible to restrict the number of results to a
senseful value or to find entries belonging to various search phrases or
categories.

I am currently working to enable a search within results pages as a
further option.

You will find further explanations and operating examples via the "FAQ"
Button.

The Classified Advert pages have been updated also. Here you can offer
or search for hobby related items.

I hope you will like the new options. They are meant as a help to find a
quicker way to radio related information. Meanwhile more than 34.000
pages are in the database - all of them were checked manually. Probably
one of the reasons, radio-portal got the Millenium Innovation Award by
Radio Netherlands Media Network in the year 2000.

Your comments will be appreciated.

Regards, have a good weekend.
Willi Passmann, DJ6JZ

1458. Re: "Internet" radio (was: XM bait-and-switch)

Newsgroup: rec.radio.broadcasting

>"TV is TV, not cable."
>
> !?
>
> Wrong.

I respectfully disagree. A television set is used to watch cable TV and by definition, television is not necessarily wireless.

Radio, however, is, by definition, wireless. Further, a radio receiver is not used to listen to Internet audio. There is no "radio" in "Internet" radio despite the widespread use of the term. More to the relevant point, it's a moot issue, the term isn't going away.

BTW, thanks to all who responded to my query about commercial classical stations, especially those who responded directly by email.

Amateur Radio Newsline™ Report 1290 - May 3 2002

**

SPECIAL NOTICE TO THOSE WHO ONLY READ THE PRINT VERSION OF THIS NEWSCAST

ARNewsline™ 1290 coverage of the flight of Mark Shuttleworth, ZS-RSA, is very audio intensive. This historic meaning of this story really cannot be appreciated in a print version. We strongly urge you this week to visit www.arnewsline.org, click on the newscast number, download the MP3 file and listen to a moment in history that was made possible by Amateur Radio. Thank you.

**

Amateur Radio Newsline report number 1290 with a release date of Friday, May 3rd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Mark Shuttleworth comes on the air from the I-S-S and South Africa cheers. This story is first on Amateur Radio Newsline report number 1290 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: SECOND SPACE VISITOR OPERATES HAM RADIO FROM THE ISS

South African amateur researcher Mark Shuttleworth has made his way to the International Space Station and to ham radio. Amateur Radio Newsline’s Roy Neal, K6DUE, has been following the mission and brings us up to date:

--

(STUDENTS CHEER)

MORE THAN 200 STUDENTS, IN SOUTH AFRICA, CHEERED THEIR NEW HERO, MARK SHUTTLEWORTH. THEY TALKED TO HIM VIA AMATEUR RADIO. NICE DX. ON THE FIRST CALL, THESE ARE STUDENTS IN CAPE TOWN, TALKING TO THE PASSENGER IN SPACE BY WAY OF HAM STATION VK5ZAI, IN AUSTRALIA.

(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)

MARK SHUTTLEWORTH HAS BECOME A HERO IN SOUTH AFRICA. TO QUOTE THE HEADLINES: “HE’S THE FIRST AFRICAN IN SPACE” AND HAM RADIO HAS ENHANCED THAT IMAGE.

USING ARISS -- THE AMATEUR RADIO ON THE INTERNATIONAL SPACE STATION -- WITH SPECIAL PERMISSION AND AN HONORARY LICENSE -- SHUTTLEWORTH LINED UP CONTACTS WITH HUNDREDS OF SCHOOL KIDS -- SCHOOL LEARNERS THEY'RE CALLED IN SOUTH AFRICA. HE ALSO MADE SOME GENERAL CONTACTS WITH HAM RADIO OPERATORS.

ON FOUR DIFFERENT DAYS, STUDENTS GATHERED AT FOUR SPECIAL SCHOOLS, STARTING WITH SHUTTLEWORTH'S ALMA MATER, BISHOPS IN CAPE TOWN. ALL TOLD, ABOUT A THOUSAND SOUTH AFRICAN STUDENT LEARNERS SHARED THE EXPERIENCE OF DIRECT CONTACT.

ON THE SECOND DAY SOME 300 STUDENTS GATHERED AT THE HAVENSIDE COMMUNITY CENTER IN DURBAN WERE TREATED TO SOME REAL TIME EXCITEMENT. SHUTTLEWORTH WAS NOT ON THE AIR AT THE APPOINTED HOUR! HE WAS BUSY COMPLETING A MEDICAL EXPERIMENT.

AN EMERGENCY TEAM WENT TO WORK. THEY CALLED RUSSIAN MISSION CONTROL, IN MOSCOW, NASA MISSION CONTROL IN HOUSTON, MARK SHUTTLEWORTH ABOARD THE SPACE STATION…AND THEY AWAKENED TONY HUTCHISON, VK5ZAI, IN AUSTRALIA BEFORE DAWN.

AT ONE POINT THE SOUTH AFRICAN COORDINATOR, RICHARD MILLS, WAS ON THREE PHONES AT THE SAME TIME. SOMEHOW IT WORKED AND LESS THAN HALF AN HOUR AFTER THE FIRST ATTEMPT THEY MADE CONTACT AND THE HAPPY STUDENTS CHATTED BRIEFLY WITH THEIR HERO IN SPACE.

ARISS PROVIDED TOP NOTCH GROUND STATIONS IN AUSTRALIA, SOUTH AFRICA AND THE UNITED STATES TO MAKE THE CONTACTS. ON THE AIR, MARK USED ONE OF THE ISS INTERNATIONAL CALLS, NA1SS. THE COMMUNICATIONS WERE FED AROUND THE WORLD AS A DONATION FROM WORLDCOM, THE INTERNATIONAL COMMUNICATIONS NETWORK.

MOST SOUTH AFRICAN RADIO AND TELEVISION STATIONS AND NETWORKS CARRIED THE REPORTS LIVE AND REPEATED THEM ON TAPE. NEWSPAPERS AND MAGAZINES GAVE THEM HEADLINES GALORE. IN THE UNITED STATES, CABLE NETWORK MSNBC CARRIED THE CONTACTS.

--
(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)
--

BEFORE TAKING OFF ON HIS SPACE FLIGHT, FOR WHICH HE PAID RUSSIA AN ESTIMATED $20 MILLION, SHUTTLEWORTH TOLD REPORTERS THAT HIS LIVE COMMUNICATION REPRESENTS A MAJOR TURNING POINT FOR THE IMAGE OF SOUTH AFRICAN EDUCATION. THEN MARK SHUTTLEWORTH ADDED "THIS PUTS A GROUP OF OUR SCHOOL LEARNERS UNIQUELY INTO THE GLOBAL SPOTLIGHT OF SPACE EXPLORATION."

AND THAT'S JUST WHAT HE DID, HOLDING CONVERSATIONS WITH STUDENTS WHO WON THE RIGHT TO ASK THEIR QUESTIONS IN A NATIONAL COMPETITION.
--
(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)
--
SPACE TRAVEL HAS BEEN A LIFELONG DREAM FOR MARK SHUTTLEWORTH. HE HAS SHARED IT WITH A VERY GRATEFUL SOUTH AFRICA AND IN THE PROCESS HAS GIVEN AMATEUR RADIO A MAGNIFICENT SHOWCASE TO THE WORLD.

FOR THE AMATEUR RADIO NEWSLINE, RN, K6DUE.

--

The crew's primary mission was to deliver a fresh Soyuz spacecraft to the I-S-S. This spacecraft remains available as an emergency escape lifeboat. (ARNewsline(tm))

**

HAM RADIO IN SPACE: SHUTTLEWORTH MAKES RANDOM CONTACTS

Mark Shuttlesworth was active on voice over North America from the International Space Station making random contacts. He used the standard space communications F-M channel pair 145.800 to transmit while listening on 144.490 MHz. One of those he spoke to was AMSAT North America's Frank Bauer, KA3HDO. Mark's audio was captured by Bruce Paige, KK5DO and posted to his website. Take a listen:

--
Shuttleworth: "Kilo-Alpha-3-Hotel-Delta-Oscar this is NA1SS. Do you copy us?"
(Response)
Shuttleworth: "Thaks very much for your help with the station on the ISS."
--

Shuttleworth was only been heard using NA1SS. That's a call assigned to the ISS. He's not used his honorary South African ZS-RSA callsign. According to Miles Mann, WF1F, Shuttleworth worked many stations as he flew across the United States. This included school amateur radio club KB3BRT in Knoxville Pennsylvania. More next week. (ARNewsline(tm) with audio provided by KK5DO)

**

HAM RADIO IN SPACE: SHUTTLEWORTHS SPECIAL CALL

Before his flight, Mark Shuttleworth was granted a temporary honorary ham radio call to operate from the International Space Station. And while everyone who is assigned to the ISS has some form of ham radio certification, the call, ZS RSA, is a one of a kind. Amateur Radio Newsline's Henry Feinberg, K2SSQ, tells us why:

--

According to Deon Erwin, ZR1DQ, space visitor Mark Shuttleworth received all the information in Russia's Star City, from the South African Radio League, to study for his ham radio license and he was trying to fit these studies into his busy training schedule. However, there was doubt whether Shuttleworth would actually have the time to complete his ham radio exam due to the eight months it took to learn Russian and simultaneously completing his astronaut training.

So the Oakdale Amateur Radio Club near Cape Town, South Africa, negotiated with the South African licensing authority to grant Shuttleworth an Amateur Radio license in light of the tight schedule before the launch and in anticipation of him writing the test. The authorities agreed and awarded the temporary, honorary and very unique callsign ZS RSA. ZS is the prefix for South Africa' and R S A represents the nations name -- the Republic of South Africa.

Shuttleworth’s callsign is only valid for three months. The licensing authorities did not assign a number to the callsign, as the numerals represent South Africa’s provinces and geographic locations. And in the South African licensing system no separate callsign allocation exists for space communications.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ

--

The Oakdale Amateur Radio Club is located in Durbanville, a village which is about 30 kilometers North East of Cape Town. Durbanville is Shuttleworth’s home town and where his family still lives. (ARNewsline with information from SAREX remailer)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the
Woodchuck Amateur Radio Club repeater serving Cleveland Ohio.

(5 sec pause here)

**
REPEATER LINKING: IRLP SURPASSES 400

Nate Duehr, WY0X, reports that the Internet Radio Linking Project or I-R-L-P has now exceeded 400 nodes. The latest list shows the number stands at 403 installed.

The Internet Radio Linking Project permits repeaters around the world to interconnect with one another using a Linux based computer and a simple computer to repeater interface. The system is secure against non hams penetrating it because of its propriority hardware and software made available only to licensed radio amateurs. In fact, it is the only Internet ham radio linking system permitted by the Australian government.

More information is on the world wide web at www.irlp.net. Be sure to look at http://status.irlp.net and http://maps.irlp.net to see if there is an I-R-L-P node near you (WY0X)

**

HAM RADIO IN SPACE: AMSAT-NA ANNOUNCES NEW SATELLITE PROJECT

AMSAT North America has started construction of a new low-earth-orbit communications satellite. According to the groups president Robin Haighton, VE3FRH, the satellite will be similar in size to the original AMSAT Microsat design, but will incorporate all new leading edge electronics and RF technology

The new satellite will be code named AMSAT OSCAR E or Echo until launch. It will contain both analog and digital VHF and UHF FM transponders similar to those carried on the UOSAT-OSCAR 14 and AMRAD-OSCAR 27 ham-sats that are

currently in orbit. In addition, the new satellite will have the capability to host one or two other experimental payloads.

Haighton discussed the new bird at the organization's Board of Directors meeting held in Washington, DC, on April 20th and 21st. The spacecraft is now slated to be ready for launch in late 2003. AMSAT says that a number of affordable launch opportunities are being actively explored. (ANS)

**

HAM RADIO IN SPACE: KOLIBRI 2000 TO DE-ORBIT

The Kolibri-2000 Russian and Australian School Scientific Research Microsatellite is headed toward a fiery grave. Kolibri-2000, later named RS-21 was launched on March 19th at 22:00 UTC from the International Space Station and has been in orbit for the past 6 weeks. During that time Kolibri's has been sending back telemetry and digital voice recordings.

The low cost RS-21 satellite was designed for this type of short duration mission. Part of its job included analyzing particles using a very sophisticated a flux-gate magnetometer and sending that data back to Earth. But all of this will soon end as Kolibri-2000 will reenter the Earths atmosphere and burn up sometime between May 3rd to the 4th UTC time.

Since the RS-21 has solar panels to recharge it batteries, it should be able to continue to transmit data until re-entry occurs. To hear its last transmissions, keep your radio set to the satellites primary downlink on 435.335 MHz and secondary downlink on 145.825 MHz. Both frequencies operate CW and FSK and you might want to keep a tape recorder running to catch a bit of ham radio space history as the mission of Kolibri-2000 comes to an end. (WF1F, ARNewsline(tm))

ENFORCEMENT: OWNERS OF BROOKLYN REPEATER DON’T RESPOND TO FCC

The owner operators of a repeater in the New York City area have not yet responded to a letter of inquiry from the FCC and the agency wants to know why. So it has once again written to one of the pair of hams to demand an answer. The person posing the questions is Special Counsel Riley Hollingsworth, K4ZDH:

--
Hollingsworth: “We warned Thomas Batista, an operator of the KC2DDD and the N2IFU repeater -- the repeater alternately known by both of those call signs -- in Corona New York -- that we had nor gotten a response from him to our letter of February 15th. That letter concerned interference and allegations of no coordination.”
--

In earlier letters to Batista and Gerardo Arias regarding the same repeater, the FCC asked for an explanation of why the system input is on 143.020 MHz. This is a frequency not allocated for use by hams. (FCC)

**

RADIO RULES: XM & SIRIUS CONCERNED ABOUT OUT-OF-BAND EMISSIONS

The nation's two satellite digital audio radio service providers, XM and Sirius, are concerned that out-of-band signals from a variety of wireless devices. The CGC Communicator reports that the two worry that these services will eventually cause widespread interference to their program services.

Singled out as potential culprits are license-free Part 15 and 18 devices such as ISM, Bluetooth, IEEE 802.11b, home RF wireless devices, RF lighting, ultra-wideband devices and even Family Radio Service transmitters. The fifth harmonics from Channels FRS channels 8 to 14 fall within XM's passband but not Sirius's. More information is found at the FCC website under ET Docket 01-278, RM-9375 and RM-10051. SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

Its time once again to hear from our support fund administrator. Here’s N6TCQ.

--

In the month of February we heard from The Montgomery ARC of Gaithersburg, MD; The Kanawha ARC of Charleston, WV; Michael Leahan, N9PQK of Sun Prairie, WI; Jay Underdown, W0PS of St. Charles, MO; The DuPage, IL ARC; Russell Lamb and the South Texas Amateur Repeater Society of Harlingen, TX, WH8H; The Steamboat Springs, CO Amateur Radio Association; regular contributor William Walters, WA2IBM of San Jose, CA.; The Kings ARC of Armona, CA; David Estrada, KD6HDX and the INLANDARS repeater system of Chino Hills, CA and the Xerox Amateur Radio Club in El Segundo, WD6CZH.

Thanks to everybody for their support. A reminder that Newsline is a 501c 3 and a California non-profit corporation; all contributions are tax-deductible.

The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066. If you missed it, it will be given again at the end of this week's newscast.

I'm Andy Jarema, N6TCQ.

--

Also, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award closes May 30th. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org. (ARNewsline(tm) Support Fund)

**

EMERGING TECHNOLOGY: AUTOMATING NEWSLINE

Fred Vobbe of the National Radio Club D-X Audio Service says that he is now playing Amateur Radio Newsline automatically on his repeater. Fred says that he uses Echo Station software to automatically play this newscast every Saturday and Monday night at 7 P-M over his W8HDU repeater.

Fred’s machine operates 443.625 and is located in Allen County Ohio. More on Echo Station automation software is on the word wide web at www dot westmountainradio.com and click the link on the right side of the page that says Amateur Radio soundcard software presentation. (W8HDU)

**

EMERGING TECHNOLOGY: CALL 511 IN UTAH FOR TRAFFIC INFO

Travelers in Utah have a new way to get updates on traffic, and they can do it without having to watch television or listen to the radio. Instead, using a cellular phone, they can dial the nation's first voice-activated 511 travel service line.

Called Tellme, this is one of several free, voice-activated services known as voice portals.' Voice portals use speach recognition software to retrieve and translate information from the Internet. Taking their cues from spoken words, the services can dispense stock quotes, horoscopes, driving directions, sports scores and other widely sought information over any telephone.

Utah was one of six states selected to launch a 511 service after the Federal Communications Commission officially designated 511 as a nationwide number for travel information back in July 2000. Like the emergency number 911, the 511 systems are a public service and free. (Road Routes)

INTERNATIONAL: UK ANNOUNCES INTERMEDIATE LICENSE CLASS PLANS

The United Kingdom’s Radiocommunications Agency has announced details of the qualifications and examinations for the revised licensing structure for that nations Amateur Radio service.

A press release from the Radiocommunications Agency says that a new program of study for the U-K Intermediate license will be introduced early in 2003. This will be based on the current Novice syllabus but will exclude those topics covered in the Foundation License. The Radiocommunications Agency says that it plans to announce the course outline at least three months ahead of its introduction. It will be run initially as a pilot format similar to the Foundation pilot. Once the new syllabus is in force, a pass at Foundation level will be a pre-requisite to sitting the Intermediate Class U-K exam.

The new licensing structure was announced in September 2001. It’s first phase was the introduction of the Foundation License last January. This new ticket has been deemed to be a major success with over 1500 M 3 prefix Foundation Licenses having been issued. (RSGB)

THAT FINAL ITEM: USA ARDF CHAMPIONSHIP WINNERS ANNOUNCED

And finally, who's the best in the country at finding hidden transmitters? Here's Newsline's Joe Moell, K0OV, with the results of a contest to find the answer, and an opportunity for your club to get in on the fun.

--

USA has just completed its second national championships of on-foot hidden transmitter hunting, also called radio-orienteering and ARDF. The event took place near Pine Mountain, Georgia, hosted by hams in the Georgia Orienteering club. Primary organizers were Laurie Searle KG4FDM and Sam Smith N4MAP. About two dozen of our country's best fox-finders went into the deep woods of Franklin D. Roosevelt State Park, trying to be first to find up to five transmitters and then navigate their way to the finish line. Their rewards: the possibility of a medal and a place on our country's team going to the ARDF World Championships in Slovakia this coming September.

The championships included two complete courses on consecutive days, the first on two meters and the second on 80 meters. Best performance overall was by Gyuri Nagi KF6YKN, who averaged 19 minutes per fox on two meters and an amazing 15 minutes per fox on 80 meters. Gyuri, whose other call is HA3PA, is a part-time US resident who learned the sport in his native Hungary. He competed in M21, the prime age division, requiring him to find five foxes on a six kilometer forest course. Gold medal winning hams in other age and gender divisions were Jerry Boyd WB8WFK, Valerie Meyer KG4QWE, John Munsey KB3GK, Debbie Pendley KD5LOK, Charlie Siler KO4NO, and Jack Stump KD5OEO.

Hidden transmitter hunting is a fast-growing activity in the USA, whether on foot like these championships, or in cars full of direction finding gear and computers. It's time for your club to give it a try. The perfect opportunity is coming May 11 and 12, which will be the fifth annual National Foxhunting Weekend, sponsored by CQ magazine. The May issue of CQ has all the details. On the Web, you can find lots of information on both the National Fox Hunting W and the just-completed national Championships at www.homingin.com. That's

homingin -- one word -- homingin.com

>From southern California, where every weekend is a transmitter hunting weekend, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

The next stop for the winners? Hopefully Slovakia and the world championships this fall. (ARNewsline(tm). K0OV)

> minority is probably sufficient to make XM a thriving business.

I'd have to disagree that there are enough "minority" listeners to make XM work. If there were that many, a commercial outlet would be rushing to fill the need.

XM is, according to Radio World, "284.4-Million" in the hole. Now Eduardo will jump on here and tell you it was "planned" and part of doing business, but we all know that losses of that magnitude take a lot of people walking into Circuit City and plopping their dollars down for XM. Is there enough "minorities" to not only make up for the 1/4-Billion in losses? I personally don't think so and I think anyone who has been watching the pitiful Maketing campaign by XM would have to concur. One factor in the XM Chicken Littles analysis is that XM has no local content. All of us who have spent more than 10-minutes in a GM chair, know that LOCAL CONTENT is critical to success in our markets. Typcial listener is 15-30-minutes on the way to and from work. They want the time (so they know if they'll be late) the weather (so they know what to wear) and in general, want to know what is going on in thieir immediate area. XM does not offer that.

Now really, how many people, as a percentage, have to drive across country everyday and listen to Cuban Punk Polka Reggae Rap Music? How many people are going to lay down $400-$600 just to get the radio, antenna and installation, then pay $10 a month to get stations that play commercials? Once the novelty wears off they're dead in the water. Its just common sense. One of the XM employees posted on another newsgroup an XM PR Puff piece that claimed that XM would be "almost CD Quality". ALMOST? Well heck, you could go out and buy a nice collection of CD's, THAT ARE CD QUALITY, for the $600 you'll lay out for XM! DUH!

Sorry boys, but I don't see the end of Commercial Broadcasting from XM or Sirius as they won't last long enough to become a threat to advertising revenue, much less to ratings. Our threat in commercial broadcating is from within. If we don't get rid of the Scott/Prophet

systems and start providing better programming to our meal ticket, we'll do ourselves in.

Cheers

There is also a boom box to be introduced for XM. Given the nature of the product and the reception method, the automobile seems to be the most important platform initially which is why the majority of efforts will be expended there. Interestingly, I have an XM radio in an interior office in large office building in the LA area, 4 feet below the roof and about that from a window and we get XM very well for monitoring purposes.

Take just the "proven" figure of 5% of the population that does not use
radio regularly, or another 5% that uses it very sparingly. Take away from
this a segment that has a bah-humbug attitude towards entertainment in
general and you still have around 10% of the adult population, something
like 20 million people who are prime targets.

If we take Los Angeles, with an MSA population of around 13 million as an example, we see that LA has below 5% of the nation's total 12+ population. Now, if the same 10% of the LA population is made of light or non-listeners (which it is), we have about a million 18+ listeners available. Now, let's look at them closely. Maybe 50 thousand are Hisapnics who like Rock en Espa&#65533;ol. Another 30 thousand are Hispancs who like salsa. Neither format exists in LA. Neither group could sustain a local station with a potential cume that is below the Minimum Reporting Standards on cume from Arbitron. Then, we have a hundred thousand dance fans. But some like freestyle and some like trance. More 50 thousand person options. We have 60 thousand traditional country fans, 20 thousand dixieland fans, 200 thousand standards fans, etc. None of these options is really compatible with all the others, so that 10% of LA listening is really made up of lots of 0.5% and lower partisan groups which no station can successfully defend.

However, with 100 channels, XM can have a national salsa channel... because
there are maybe a million listeners in the US who want this and can get it
nowhere in the USA. Repeat this a hundred times over, and you see why
terrestrial radio can not compete in ultra nice broadcasting. This, of
course, is without taking into account the bulk of US markets that do not
have even a dozen stations to choose from...

>

Fortunately, XM does not anticipate a profit for 3 more years, and then only a break even.

Ford lost $5.4 billion last year, and I don't see anyone saying "don't by that $50,000 Town Car becaue the company is bankrupt." TW/AOL just lost over $50 billion...

Start ups cost money, especially if the start up period has no possible revenue stream. And, since the losses were paid from equity financing, there are no loans to pay back later.

> Is there enough "minorities" to not only make up for the

> has no local content. All of us who have spent more than 10-minutes
> in a GM chair, know that LOCAL CONTENT is critical to success in our
> markets.

Not necessarily. I have experience with a station that qualifies as classic rock, and it is networed around an entire country on about 50 local staitons. Neither the main staiton nor the simulcasts do anything local. In every market where there are ratings, the staiton is #1 with a share often the double of the nearest competitor. ANd this is a station with true adult demos, extending out to 64 years of age.

These same folks know how to switch to AM to get the news.

I have alternately been in the GM, owner's or COO's chair form most of my 40--some years in broadcasting. Some of my best staitons were very involved, but a number of the rest were pure music and entertainment plays with no effort at all at news, weather or traffic. Since Sirius and XM are niche plays, there are plenty of non-nes-junkies to sustain them... and those who do need local news... well, if they are discerning enough to dislike conventional radio, they will be smart enough to find news stations by pushing the band button on the radio.

> Typcial listener is 15-30-minutes on the way to and from

> is going on in thieir immediate area. XM does not offer that.

Gee, in LA that means that about 60% of the audience is out in the cold. Or heat. Most stations and morning shows have little local content at all; many have none because they are syndicated. I turn to a different station when traffic comes on, and listen to news on a nes station, not some rip and read A/C that is trying todo the news. Most others know this too. T

Nationally, 30% of all radio listening is done in the car. 30%. That is a huge figure. Now add to that people who are not satisfied, who use CDs or tapes, or nothing at all.
>
> Now really, how many people, as a percentage, have to drive across

Very few commercials. Or none.

Just tell me where (and I purposely take a deep niche example) those who like Rock en Espa&#65533;ol can get their music otherwise? Most record stores outside big Hispanic markets do not carry this product, and, if they do, it is overpriced and badly selected. XM is a very strong alternative for this gorup, nearly a million in size. Multiply that by all the other unserved and underserved groups and you have at least the potential for success.

In a noisy environment, like a car, I seriously doubt that tiny, tiny differences in audio quality will be the deciding factor. Content will be.
>

Funny, I heard the same Luddite arguments when cart machines first came on the scene. And Audio Vaults and friends do nothing a good person with Schaefer automation system could not do back in the 60's. And, actually, the Prophet and A/V and Scott and Dalet systems are used more often for live assist than for full automation!

I think there has to be someone worth listening to before anyone would go to the trouble to clone and black market a reciever! XM is much ado about nothing! The only place you'll see anyone hyping, posting PR Puff pieces, or making outrageous claims about XM are right here on USENET. The sales are slow to stagnet in the stores and in part, its because there ain't anything special about XM. Maybe Sirius will be different but I wouldn't bet any money on it. After having listened to XM for a solid week, its clear they spent all the money on the Satellite, Terrestrial Repeaters, studios, phones and offices. They clearly didn't spend it on the programs for listeners. The last PR Puff claim from the XM Marketing Department proclaimed that XM was "close to CD quality". Close? Why not just take that $600 plus you'll spend on XM and go buy some nice CD's and enjoy actual CD quality, instead of "close" to CD quality?

Now we can sit back and watch, Dave, Tom and Eduardo pound their chests and post the latest XM PR Marketing Puff Piece. Boys, please read them before you post them.

How many people routinely "drive across the country" at all? On those rare occasions during which I had the pleasure to do so (mainly trips back and forth between San Jose and Provo, UT), the pleasure was listening to the little stations along the way, or listening to the big-boomer AM stations at night. Pre-packaged, homogenized, personality-less, plug-in, closed-circuit formats don't strike me as all that entertaining--from a radio listening standpoint, anyway.

Actually, I find the quality inadequate for even listening in the car. The granularity of cramming two channels into a 64K-bit stream may satisfy the unwashed masses, but I grew up in a different era in which those artifacts were unknown.

There are some formats like standards that advertisers won't touch, even
though they get substantial listenership. "Older people don't respond to
advertising." The advertiser-supported model doesn't work for that
format. The question is "will these listeners subscribe in order to
heard what they like"? I understand that XM is finding that the median
age of their subscribers is considerably higher than they expected.

>ABC Radio Incorporated appears on the license data at the FCC.<

The license info for WQEW currently lists The New York Times Electronic Media Company as the licensee, and the mailing address is listed as 229 West 43d Street, New York NY 10036...the address of the Times building. It may simply be, however, that the FCC either hasn't updated their online info, or that the electronic databases are still fubar. I do seem to remember at the time of the Radio Disney deal that ABC signed a 7-year LMA with an option to buy the station at the end of the contract.

C. Francis Jenkins, one of the pioneers, made a distinction between
television (by wire) and radiovision (by radio).

The inventor of the world's first viable color TV system, Gonzalez Camarena,
in Mexico, used it first to transmit operating room procedures to medical
students.

It's all part of a grand conspiracy to get the listening and viewing public to accept lower quality under the guise of "it's DIGITAL so therefore it must be BETTER!" I.e. "lossy" compression of audio and video, as used in MP3, XM, Sirius, IBOC, DAB, DVD, SDTV ("Standard Definition" Digital TV), HDTV, etc.... all of which can yield results far worse than that of traditional analog techniques when used inappropriately.

The XM annual report that I got yesterday shows slightly higher young adult
usage, but there is definitely interest all the way through persons over 55,
and the differences form one age cell to another are pretty small.

Here is the data:

The first experimental television transmission in Mexico-- from Cuernavaca to Mexico City--was arranged by Francisco Javier Stavoli in 1931. Stavoli purchased a Nipkow system from Western Television in Chicago with funding from the ruling party, which was then called Partido Revolucionario Mexicano (Mexican Revolutionary Party) and became the current Partido Revolucionario Institucional (Institutional Revolutionary Party). In 1934 Guillermo Gonzalez Camarena built his own monochromatic camera; by 1939, Gonzalez Camarena had developed a Trichromatic system, and in 1940 he obtained the first patent for color television in the world. In 1942, after Lee deForest traveled to meet with him in order to buy the rights, he secured the U.S. patent under description of the Chromoscopic Adaptors for Television Equipment. In 1946 Gonzalez Camarena also created XE1GGC-Channel 5, Mexico's first experimental television station, and started weekly transmissions to a couple of receivers, built by Gonzalez Camarena himself, installed at the radio stations XEW and XEQ, and at the Liga Mexicana de Radioexperimentadores (Mexican League of Radioexperimentors). The first on-air presenter was Luis M. Farias and the group of actors and actresses performing in those transmissions were Rita Rey, Emma Telmo, Amparo Guerra Margain and Carlos Ortiz Sanchez. Gonzalez Camarena also built the studio Gon-Cam in 1948, which was considered the best television system in the world in a survey done by Columbia College of Chicago.

I've listened to XM for a solid week and can tell you the sound "quality" isn't as good as your local FM radio station. The only thing your going to be surrounded by is noise with XM.

They can have their shills post their PR Hype on USENET all day long, it doesn't change the fact that the service is deeping in the hole, $284.4-million, they aren't selling their high priced receivers, antennas and subscriptions like they thought, and the programming leaves a lot to be desired.

Guess will see if Sirius has learned from XM's mistakes.

Based on the above PR Hype Marketing Puff Piece, XM shouldn't make promises it can't deliver.

Watch it John and Kevin, you'll soon be the target of the XM shills, screaming hysterically that you two have an "agenda" for posting non-glowing reports about the XM service. I listened for a solid week, while installing one of their terrestrial repeaters and found it pretty lame. I've been dragged over the coals by the XM PR department and investors for posting my opinion of the service ever since. Not to mention, that XM posted a 284.4-million loss for the year, which I dared to post publicly here on USENET. These XM employees and investors are desperate and vicsous in their attacks against anyone that disagree's with their commercial hype.

I too found the quality pretty shabby for the amount of money you have to spend on receiver, antenna, installation, plus a monthly fee! I agree that this is part of the dumming down of consumer expectations for good quality audio.

I just think, based on the amount of money XM is in the hole, the fact that they aren't selling their receivers as expected, that XM is not going to make it. Sirius? Who knows? Unless they have a better audio quality, better marketing plan and better programming than XM, they too will soon be in the "oh yeah, I remember that fiasco" memory!

Hey, at least those receivers will come in handy as "white noise" sound generators to put the marks that bought them to sleep!

I suppose if one repeats this often enough, it becomes fact to those who don't want to bother with the legwork of selling standards to advertisers. The reality is that it is as salable as any other radio format if it is done properly and presented to the advertisers appropriately. This includes an interaction of the station with both the listeners and the advertisers.

This lets out the satellite standards formats which, incidentally, pretty much suck any way you look at it. At one brief, shining moment in the San Francisco Bay Area, there were not one, but two standards stations building not only an audience base but an advertiser base as well. One of them disappeared, not due to market conditions, or even the inability to sell advertising, but due to the short sightedness and lack of depth of a hack ARS general manager, who, if the format wasn't Adult Contemporary, flopped around like a fish out of water. He made sure the station was sold to the nearest foreign language purveyor.

The other standards station continues to thrive.

The conglomerates certainly cling to the excuse that certain formats are taboo when it comes to advertising, but that is an easy and cheap copout to justify the laziness of running the same ole same ole.

> The question is "will these listeners subscribe in order to
> heard what they like"? I understand that XM is finding that the median
> age of their subscribers is considerably higher than they expected.

And another question is, "Will broadcasters watch to see what sells on XM and make adjustments accordingly?" Probably not, but if XM actually became a threat, conventional broadcasters COULD move on a dime to stem the exodus.

I'm personally well out of any measured demographic in broadcasting, but it doesn't take "young ears" to hear the annoying artifacts of ultra-compressed digital audio. I wonder if a critical mass audience will put up with this "sound" over the long haul.

Gonzalez Camarena also got the first color TV patents in the US. The problem was that the system had tow defects: it used a mechanical rotary color filter and it was not sponsored by General Sarnoff. Gonzalez Camarena built the first TV stations in Mexico, so he was a founder of what may be the largest international TV company outside the US, Televisa. He held several dozen Mexican and US patents for developments, many of which were licensed to US companies in the early days of TV.

Not everything was invented in the US, Kevin. It is often hard to see that there was scientific work going on outside the US because we live inside the country, but a lot of the early developmental work in electronics was not American in origin.

1489. XM stabilizes after stock plunge - But for how long???

Newsgroup: rec.radio.broadcasting
Date: 2002-05-07 02:39:11 UTC
From: RussellTodd@istoreplus.net
Message-ID: <ab7eof$rm8$1@xuxa.iecc.com>
Source record: 11051

XM reacted to several recent stories after an auditor had issued NEGATIVE OPINION BASED ON wording in an XM filing with the SEC. (insert XM spin here)
XM said the annual report included a standard phrase for companies that do not have 12-months funding, noting the company's need to "continue as a going concern depends on continued fundraising". The statement from auditor KPMG LLP had caused XM's stock to drop 13% on NASDAQ to close at $13 on March 19th.

Add to this, the $284.4-million loss last year, the inability to hit subscriber projections and mediocore quality sound and programming and it explains the financial mess XM finds itself in. Now I know that the regular XM Employees and shills, (Dave, Eduardo, Tom ect) will have more excuses than a teenager caught out after curfew, but this was KPMG doing the audit and you know they do thousands of audits a month and you'd think they would be familiar with a "standard phrase".

Now we see that Sirius is in trouble too. Sirius and Lehman Brothers have had to renegotiate their term loan agreement to give Sirius more flexibility. The company also reported a 4th Quarter loss of $51.8-Million, up from $38.2-Million for the same period in 2000. For the year Sirius reported a LOSS of $168.5-Million. Last year they had a loss of $125.6-Million. Because of the finanacial situation at Sirius, they have rushed its Nationwide launch date to July 1st. Sirius launched in 4-markets on February 14th and has guarded the subscription figures like Fort Knox.

If you're buying one of these radio's better be sure they can be converted to pick up something else when these boys go under.

The first part is just untrue. XM is ahead of the projections they made over a year ago. They are pacing a number of months ahead of projections, and disconnects arelower than expected.

As to not making it, XM does not project profits for three more years, and then only a break even. They are not supposed to make money, as is the case with 99% of staartups when they are in the initial product development process. How many biotech companies make money? SOme have been losing much more than XM for nearly a decade!

Salespeople and truck drivers who work out west do it as a matter of
routine. I have several friends who are reps for companies like JVC and
Canon, and they spend a ton of time in their cars, coverting territories
that are pretty far-flung. I also know a truck driver who drives a truck for
a grocery wholesaler, and his territory covers Albuquerque, Phoenix,
Flagstaff, Las Vegas and Gallup from his home base of Phoenix.

And when you drive a lot oout west, the uniqueness of listening to all the
little stations along the way eventually yields to the realization that most
of those stations are either right wing whacko stations (the kind that make
Rush Limbaugh sound like a socialist...), country stations or classic (read
"dinosaur rock) stations.

Interesting. You're complaining about sound quality, but extolling the
virtues of "little stations" that almost universally sound as though they're
broadcasting from inside a coffee can.

John, the problem lies outside the area of influence of a single staiton.
The situation is such that most significant advertisers are aware that
people over the 55 age mark tend to have very well established purchasing
patterns. Because of htis, it costs much much more to separate a person form
thier habits and to get them to try a different one. Generally, the cost of
conversion is greater than the potential profit.

Perhaps, as the nation ages, there will be some development of different ad
techniques to reach older brand-loyal consumers. Most will probably be in
the direct marketing area, and radio will not benefit.

In San Francisco, KABL has good ratings, but a power ratio of 0.19:1, one of
the worst I have seen. That means they have around a 2.2 average audience
share, and less than a half-percent of radio revenue. That is actually
terrible.
>
> The other standards station continues to thrive.

If you are referring to KABL, look at the figures.
>
> The conglomerates certainly cling to the excuse that certain formats are
> taboo when it comes to advertising, but that is an easy and cheap copout
to
> justify the laziness of running the same ole same ole.

In a market like san Francisco, over a third of billing is national. There
is seldom a national up for 55+. Locall revenue splits about half between
local direct and local agency or local house agency revenue. Agencies obey
product targets set by the client, and can not change them easily if ever.
Standards and other 55+ stations don't even do well in markets driven by

retail business. One of the reasons is that advertisers judge these staitons by the cash register. When standards stations odn't get foks out for remots or sales, the advertisers stop buying them.

> And another question is, "Will broadcasters watch to see what sells on XM
> and make adjustments accordingly?" Probably not, but if XM actually became
a
> threat, conventional broadcasters COULD move on a dime to stem the exodus.

MOst of the prime XM formats are too niche to be profitable in large markets and are impossible to contemplate in smaller ones. There is not terrestrial radio can do, but since XM and Sirius are principally targeting those dissatisfied with AM and FM as it is today, at the moment there is little fear factor in place.

I know many users of XM... the only place I hear comments on the quality of a negative nature is on UseNet. The rest are so enamored of the content that any minor quality differences are irrelevant

I find it unbelievable that there'd be no programming for them. It might resemble the crap left on old C-band birds or shortwave or what we'd get off the border-blasters in the late 40s and fifties.

When we put the first satellite up, a religious broadcaster bought time on it even though there were no downlinks. That didn't matter, they said. They were looking for another kind of audience.

There's a common denominator so low that that bandwidth won't go to waste. We may hear things that make us pine for the days of telephone testimonials for Gold Bond Medicated Powder.

In English, "American" is pretty generally accepted usage for folks from the USA. In Spanish, "americano" can mean someone from the Americas (anywhere) or from the USA.

You seldom hear someone form Latin America calling themselves an American; Latino is the common term, but the national origin is generally the main identifier. My kids, for example, would never call themselves Americans in Spanish; they dislike both Latina and Hispana as stereotypical and use Puertorican nearly always. They are, however, proud to say they are "ciudadanas americanas."

I agree the moderator needs to do his job and delete false accusations, like yours Tom. I've told no lies, only posted my opinion, and facts about the dire financial straits that XM is in. For some reason, this drives you to make hysterical posts, false accusations and whine about how the moderator should do his job.

If you will note, for future reference, this is "rec.radio.broadcasting" not rec.radio.satellite, rec.radio.hypeprsatetellitepayservice, or anything to do with PAY RADIO SERVICES! If you insist on posting off topic nonsense about a troubled financially bankrupt service on a a BROADCASTING forum, you really should stop whining about someone taking you task.

Now where have I "lied"?

Just because I don't agree with you and the XM PR Hype Department, doesn't mean I have lied. It just means we don't agree on this issue.

Please note my other FACTUAL POST IN THIS FORUM about the 13% drop in XM stock because of an audit by KPMG LLP in which XM made the statement that made the stock drop. I think if you have an issue about truth, you take it up with KPMG LLP. By the way, they are one of the most respected auditing/financial firms in the world, but I'm sure you and the XM Hype PR Puff Department will find some fault with them, as you have with anyone who doesn't post glowing reports about this doomed PAY SATELLITE SERVICE.

Where you're writing from makes a big difference. I can tell you here in Podunk the audio quality of the radio stations suck. Its unforgiveable.

I've met people at some of these stations, and while they're nice guys, they don't have a clue when it comes to audio or audio processing. One station had a good portion of its stuff 180 degrees out of phase.

They played songs on their air that all but went away on mono radioes, and they actually got my partner (a friend of a friend, etc) to figure out what was wrong, because they basically have no engineering department.

I travel I-10 a lot, and listen on the way, and the variation in audio quality between the serious markets (New Orleans, Houston, San Antonio, El Paso and Phoenix), and the rest is night and day.

There is a pretty big market out here for people who like to listen to the radio, but live in smaller markets, or outside markets.

I agree with the issue of tone, and encourage you to allow access on the issue of content. XM is radio, albeit a new form of radio. If they continue to be able to raise capital, as they have for three years now, they will be a major challenge to radio as we know it.

The most interesting turn of this thread is in regards to the audio and program quality outside the major markets. I spend most weekends in a non-Top-100 market, and the radio there is dreadful. The audio processing, technical proficiency and program quality is nothing short of unlistenable. There is nothing local on any station that I have tuned to, unless the 18 minutes or more of local spots qualifies as "local content." In addition, this market of nearly 20 stations is missing a wide range of formats available in slightly larger markets.

Since a significant percentage of the US population does not live in markets 1 to 100, I wonder if XM and Sirius should be marketing more to the smaller metros and rural areas where radio is very, very bad (ok, with a few exceptions) and there is no local service to speak of.

Your opinion it is, and proper in this forum, I think.

However, I believe nearly anyone who thinks it out would not say that XM is in dire financial straits. They made a plan over three years ago that contemplated losses into the year 2005. They are almost precisely on that plan right now.

>
> If you will note, for future reference, this is

"Bankrupt" means having no money. XM just raised over $200 million with an equity offering (no debt, in other words) that was oversubscribed by over 10%. That means more people wanted to buy the new stock than was planned. This means XM has capital to continue to operate at the planned levels of loss until some time in 2003, when they will have to offer more stock to finance further planned losses.

This method of equity financing is pretty standard with new startup businesses. As mentioned before, Amazon.com and most of the biomed firms do this and are still doing it.

As to posting about XM and Sirius here, I find it to be appropriate since the two systems seriously challenge terrestrial broadcaters in anumber of ways. You might read the growing thread on the quality of radio outside the bigger US cities. You also might look into the programming available for America's two largest minorities, Blacks and Hispanics, outside the high density Black and Hispanic markets. There are literally millions of unserved people just in those two groups...
>
> Now where have I "lied"?

OK, let's call it a misunderstanding. The term "bankrupt" as used above is inappropriate given the facts. All that is truly happening is that XM is not making money yet and they did not plan on doing so to begin with.
>

> Please note my other FACTUAL POST IN THIS FORUM about the 13% drop in
> XM stock because of an audit by KPMG LLP in which XM made the
> statement that made the stock drop.

Actually, the XM stock dropped following an issue of over $200 million in new shares. Stock prices almost always drop following a dilution of equity. A month or so ago, Radio One issued more stock (Radio One is the major African American broadcasgter in the US) and the stock dropped over 15% in tow days. It recovered a few weeks later as broadcast stocks in general surged.

XM stock is trading at over double what it was selling for 6 months ago.

> I think if you have an issue
> about truth, you take it up with KPMG LLP. By the way, they are one

Peat Marwick issued the standard statement required by accounting practices rules in conditions like that of XM. If a company has no revenues and does not have unlimited cash on hand, they must put in a "viability" statement that says that there is an issue of continuing operations if no new capital is raised.

XM in fact did raise new capital.

And the financial statements in question were the results for 2001 when XM was still not commercially operating; there was no revenue, there were huge start up expenses and there were the natural and expected losses. Since 2001, XM has raised capital needed to get them well into 2003. Still, KPMG is required to make that statement, which also appears in the reports of hundreds if not thousands of public audited startups.

Besides not being true (many small stations sound quite excellent, at least in this part of the country), the artifacts of extreme digital compression are are somewhat more annoying to me than the traditional analog deficiencies. Granted, it is a personal preference, but my sound preferences have provided me with a suitable living over the years.

I sense a little defensiveness in your tone. I make no predictions as to the success or failure of satellite radio, but I am amused that there seems to be a contingent out there that recoils at the mere asking of relevant questions. The success or failure of a niche-market product hangs on many factors, not the least of which is the convergence of the perceived needs of the target customer base.

Time will tell if these products fill the bill.

If you would like I can copy each and every post where you said that I was an XM employee. That is a lie.

Or, anyone who really cares about your posting habits can go to Google and look them up.

In my opinion, everyone should have the right to purchase XM if they so desire. They should not have to be purposely mislead by someone who has an obvious agenda.

Tom

How is XM Off Topic? It fits the definition of both Radio, and of Broadcasting. Just because the transmitter is located on a satellite, it doesn't mean it isn't broadcasting. Next thing you know, you will be claiming that programs originating from transmitters in California aren't broadcasting.

Please note that at this time I hold no opinion, pro, or con, on XM, and know very little about it.

XM is definately doing this with billboards. I've been meaning to snap
some pix and put them up on a website with a link here, but there's
never enough time.

They've gotten some very good placement. There's one on that long
stretch through New Mexico where Demming and Lordsberg are the big
deals, another in West Texas where there's nothing on FM.

1515. New Orleans swap: KKND & WRNO

Newsgroup: rec.radio.broadcasting
Date: 2002-05-08 01:31:30 UTC
From: ccbluez@aol.com
Message-ID: <ab9v5igpg1@xuxa.iecc.com>
Source record: 11078

>From allaccess.com:

" In 90 days WILKES BROADCASTING and CLEAR CHANNEL will swap frequencies in NEW ORLEANS as CLEAR CHANNEL Alternative KKND (106.7 THE END) will become a WILKES property. WILKES will assume the entire staff of KKND while WILKES' 99.5 WRNO will go to CLEAR CHANNEL.

WILKES also owns Alternative WSJZ (XTREME RADIO) at 94.7 and 94.9. I"

Word is that although the official swap is a few months away, the staff swap is imminent.

WRNO is a heritage rock station. ("WRNO - We're the Rock of New Orleans.") KKND 106.7 the End has been a solid-performing alternative rock station for CC of New Orleans for 6+ years.

This means that CCNO will have two classic rock stations (WRNO and 104.1 "The Fox), and Wilkes will now have two alternative stations in New Orleans.

One of the many "radio programming sucks" rants has to do with the use of syndication. I wonder if anyone here is willing to go out on a limb and make a forecast or two.

Assuming it's success, what effect do you think Satellite Radio will have on syndication behavior today? For example: If Dr. Laura were available through an inexpensive satellite radio, do any of you predict that local MW AM broadcast stations will cease carrying her program? Or do either feeds have anything to do with the other?

> questions.

But I don't see that coming from the XM advocating side. The defensiveness
is yours.

My problem with the anti-satellite people is that the arguments are lame. I
spent 21 years working in several places out west, and as a former avid
listener, I can tell you that broadcast radio has fallen off big time in the
last 15-20 years, and that fall-off in quality has accelerated with the
consolidation of the business. Most good small stations have gone dark, or
taken on right wing talk programming, or simulcast CNN or some such thing,
and it's happening all over the west. It doesn't matter how you're making a
living; I'm talking about how the average person -- the people that REALLY
matter in this debate -- hears things.

> The success or failure of a niche-market product hangs on many
> factors, not the least of which is the convergence of the perceived needs
of
> the target customer base.
>
> Time will tell if these products fill the bill.

Time isn't necessary. I can tell by the defensiveness and the overt nastiness of the anti-satellite crowd that the broadcast advocates are worried. And never underestimate the apathy the average person has with regard to broadcast radio these days. Except for morning drive times, broadcast radio has largely abandoned its audience. With so many alternatives in the home and at work -- cable, satellite tv and the Internet -- broacasters had better figure out how to attract us, instead iof whining and worrying about XM and Sirius taking us.

I work out of the home. If I didn't, and I spent more than an hour or two per day in my car, I'd pay the $10 for XM in a heartbeat, because there is little to nothing worse listening to on broadcast radio these days. And coming from someone who was addicted to the radio 20 years ago, that should worry someone...

Audio, yes. It's not radio.

>Whether or not it's delivered via IP over the internet, or via satellite,
>or via cable (isn't that how WMMR here in Minneapolis was distributed? I
>recall being able to get that on my "B" cable wire),

WMMR was for years a closed-circuit AM that later was available on
cable. It was never over-the-air. For purposes of this discussion, I
don't see relevance.

>it's still the same concept of an audio programming service.

Agreed. However, it's not "radio," as your reference reinforces.

>Telephony seems like a good parallel. There's telephony over IP sets that
>you can buy now that you hook to your cable modem. You pick it up, you get
>a dial tone, you can make and receive calls. Is it *really* a telephone?

Yes. Webster's confirms:

"Telephone: an instrument for reproducing sounds at a distance;
specifically one in which sound is converted into electrical impulses
for transmission by wire."

Meanwhile, here's the definition of radio:

radio (noun): "1 a : the wireless transmission and reception of
electric impulses or signals by means of electromagnetic waves b :
the use of these waves for the wireless transmission of electric
impulses into which sound is converted
2 : a radio message
3 : a radio receiving set
4 a : a radio transmitting station b : a radio broadcasting
organization c : the radio broadcasting industry d : communication by
radio"

Any definition of radio will include direct references to "wireless."
Heck, your garage door opener with remote control is radio. (Does
that make it "GM"?)

So your cellular telephone isn't a telephone ?????

Since it uses radio, it must be a radiophone.

Technically, yes. It's a radiophone. Or, as most companies call it , a cellular phone. If you spend any time reading publications about wireless internet, etc., you'll find them calling it a wireless phone.

I assume we'll have to wait for Webster to determine if "Internet Radio" is really radio once there's a viable wireless internet. Until then, there really isn't any such thing as Internet Radio. Radio requires wireless distribution.

The best we can do is call it "radio-like programming via the Internet."

"Radiophone" works for me.

Strictly speaking, it'd be a "radiotelephone", a very broad term that includes half-duplex modes like ship-to-shore and business/amateur/aircraft radio and indeed simplex modes like sound broadcasting.

As to whether internet audio transmission is "radio", I say strictly speaking, no. It's sort of a packet-switched teleharmonium (q.v.). There definitely is a "cat" (or long chain of cats) in the sense used in my sig.

What planet are you on. Most of the people at Sirius (and XM) have
spent most of their careers in terrestrial radio. Very successfully, I
might ad. Do you really think any of the satellite services could have
raised money without a staff of experienced programmers? You need to
do a little more research.

Neither one is going to survive in the long run. As you point out, XM is steeped in the Clear Channel mentality, as witnessed here by the viscous attack tactics by CC/XM employees on this forum when faced with factual information about the dire financial straits XM is in. Likewise, Sirius is steeped in losses too. So deep that its doubtful that either can climb out of the losses with enough subscribers to not only, not make it profitable, but just cover the enormous losses. I've checked with brokers this week and I can't find a one that can show me a financial model that has either of these two outter space pay satellite services making any money before the year 2525.

It has however been entertaining to watch the hysterics of the Clear Channel/XM employees gnash their teeth and employ tactics, heretofore only seen on political campaigns in defense of their doomed pay service. Anyone disagreeing with their PR Hype is labeled a liar and trouble maker. Haven't seen this level of debate since 2nd grade in the school yard. XM must be very proud of their marketing department techniques.

Its all a moot point. XM and Sirius will be as memorable as 3-D tv was. Remember that about 20-years ago? Thought not! Not to worry, the guy who bought the 3-D tv receiver eventually ended up donating it to a museum, where it sits as a testament to how guillable some people are.

Do you mean in local radio, or as a satellite service? If the latter, they can't -- the FCC allows DARS only as a pay service, not free-to-air. If the former, the trick for XM (and Sirius) is that they are appealing not to one minority group (as would, say, a local station that played only standards) but to *numerous* such groups, which taken together will be enough to get them a few million subscribers.

Interesting that the very person who instigates the viscous attacks is
first to agree with you Steven.

Having been the object of these attacks, I can tell you it doesn't
bother me in the least. It does highlight the hysterical level the XM
PR Department will go to, to silence any comments that aren't glowing
in nature about their doomed pay satellite service.

Its all an exercise in futility for the XM and Sirius cult crowd. The
Financial models I saw this week clearly show they are going under
faster than a daytimer playing "big band" in a major market. Both XM
and Sirius are in major financial crisis and can't sustain the service
at the rate they are going. XM isn't meeting projections, the stock
has plunged 13% and they posted a $284.4-million loss on the year.
Sirius reported an operating loss of $168-million and is so frantic
they have moved up their national kick-off to July 1st. By the way,
all of my points are from news articles, can be checked and verified.

As was noted in other posts, XM and Sirius are as much about
"broadcasting" as a Garage Door opener. Hey they both send out
signals. At least the Garage Door opener has a bonafide measurable
response and I know the Garage Door opener will be around in 10-years.
XM and Sirius won't.

Are you implying that perhaps more than just a miniscule of the
population has access to 'inexpensive satellite radio'? Please advise,
are these receivers being mandated sometime soon in new motor
vehicles? That would be the only vector of introduction that I can
think of.

>>Radio over the internet is just a new delivery method of an old thing.

Audio, yes. It's not radio.<

It most certainly is. One of the most commonly used terms in the Internet culture of the past few years is "Internet radio."

Language is never stagnant. Words and grammar evolve with time, technology and culture. It's been that way since homo sapiens learned how to communicate vocally. However, a dictionary, by its very nature, is stuck in the time of its publication. By your reasoning, I could look up the word "radio" in a 19th-century dictionary, and since that word wouldn't be there, conclude that there is no such thing.

Please clarify for me: half of your paragraph above appears to be stating your qualifications for your opinion and the second half is devoted to stating how my qualifications don't count. It is hard to have a meaningful discussion about the merits and deficiencies of a product or service in that sort of atmosphere. For the record, let me just say that I have lived all of my life "in the west", and have spent 35 years in the industry. That doesn't bestow divine status, but neither does it deserve your two sentence dismissal.

> whining and worrying about XM and Sirius taking us.

What makes you think broadcasters actually give a damn about satellite radio? You do realize, of course, that Clear Channel, by far the largest

broadcast radio owner in the world, owns a significant chunk of XM. In essence, I think you will find that the broadcast conglomerates will, in the end, own it all. If you think that is a choice, I have a large aviation-orange bridge I'd like to sell you. Let me ask a question you are really not going to like: what happens when satellite radio puts broadcasting under the table (as you seem to think it will)? What is to stop satellite radio operators from raising the fees to the sky and allowing the programming to deteriorate to a point even worse than broadcast radio is today?

> I work out of the home. If I didn't, and I spent more than an hour or two
> per day in my car, I'd pay the $10 for XM in a heartbeat, because there is
> little to nothing worse listening to on broadcast radio these days. And
> coming from someone who was addicted to the radio 20 years ago, that should
> worry someone...

Wait a minute! All this posturing and you are not even a satellite radio customer? "I would buy it if only..."? I guess you haven't been reading my words for content. I am not "anti-satellite". I have been simply bringing up some questions about things that might put off potential customers. For me, it is the audio quality. For you, it is apparently the non-portability issue. But is it really? You could easily put a unit in your home. The fact that you don't tells me that you are not REALLY quite as sold on it as you seem to indicate elsewhere in your post.

How interesting that you adamantly defend a product against perceived attackers that you don't even personally find worthy of your patronage!

If I were Sirius, I'd be pretty frantic too. I find it hard to understand why their roll-out takes so long. The XM nationwide roll-out took only two months. Every day Sirius has less than nationwide in-store availability is another day that XM can capture additional customers that might otherwise sign up with Sirius.

Being second to market isn't necessarily bad if it lets you correct mistakes make by #1, but it sure doesn't help if you don't have something very obviously better to offer. Maybe Sirius does, maybe they don't.

I have a question: is Dr. Laura (or any other syndicated radio program)
better on satellite radio than on conventional broadcast radio? Why?

As a card-carrying resident of Planet Earth, I have noticed what appear to be some recycled formats of decades gone by. Correction: make that "ghost-like representations of old formats". Songs that don't fit, inappropriate liners, etc. It doesn't take an experienced programmer to imitate a successful format...but it does take a good ear to determine if it is faithful to the original.

But this begs the question: if satellite radio is drawing on the same "talent" that has been responsible for broadcast radio, why would satellite radio be superior to broadcast radio? Either it is "all new" or it is "the same old". Which is it?

No, he is not sure. I am one of the people that has been accused of being an XM employee. I do not work for XM and I never have. In another newsgroup, either Russell or one of the other "anti-XM" posters went so far as to say that they called XM and got my voicemail. This cannot be true, and it was posted just to obfuscate and confuse the readers of the group.

The posts made by Russell in that group read just like the posts of many trolls who attempt to disrupt a newsgroup. The history is there on Google Groups if you care to check it out. I do not intend to participate in any flame wars with these guys anymore. You will notice that his reply to your post mentioned the fact that I was the first to reply to it. I agree fully that flame wars have no place here and that a moderated newsgroup exists for the purpose of precluding such wars.

Leaving no nit unpicked, the "wireless" control of your VCR or TV is optical, not radio. I don't see "wireless" implying radio, unless you are British.

Sirius is much more like cable music and DMX. Just a music stream. their services seem to have much broader playlists, and far fewer familiar songs.

Example: I listened to the Sirius salsa/tropical channel last week and did not hear one song I knew in over an hour. Since I built and programmed the first all-salsa station and have programmed the format constantly for over 24 years, that says that the approach is definitely an appeal to more esoteric, less mainstream tastes. Personally, I wanna' hear songs I can sing along with at least part of the time.

And the fact that you think I am only talking about you demonstrates my point. The overall tone of these "observations" is decidedly anti-satellite", since no one could possibly know at this point whether it wil succeed or not. When we give our reasons why it probably will succeed, such as the market for radio in the wide-open areas of the west, and the dearth of decent program on broadcast radio, we are met with "yeah, but..." arguments based on how much money they've lost in less than six months, even though they wisely projected about five years of losses, as they spent enormoous amounts to roll it out. Other arguments against satellite have had to do with paying $10 a month for service and having to endure commercials (forgetting that the infomercial concept was conceived on cable tv) and that sound quality isn't CD quality (apparently forgetting that most media that people pay tons for has the same problem. Think VHS, cassettes and cable TV...

> about the product is "anti-satellite"?

Absolutely. You would pretty much have to be, unless you have psychic abilities. There's no way to tell whether this thing will be successful at this point. But defining success is the trickly part. It they can get 2-3 million subscribers in five years, that's a pretty good base to work from. If receivers drop to less than $100, that will be easy. And if the big radio conglomerates keep homogenizing radio, they'll be serving up listeers by the thousands.

> Are you saying that anyone who
> expresses any doubts whatsoever is anti-satellite? (If you had read any of
> my hundreds of articles on the topic, you would realize that I have

I would say that anyone who, in an age where the Internet was a joke a year before it became revolutionary and the DVD has overtaken the VCR in about two years, can even suggest that there is no market for this sort of thing, that $10-12 a month is too much for people to pay, and that there is no chance that there's a market for this sort of thing, is a naysayer, yeah. I'd say that's pretty accurate.

No one is saying that this stuff will instantly replace radio; it doesn't have to. But if you're thinking that out of a population of 285 million enough customers cannot be found to sustain ghr technology until it becomes viable, then you're not thinking clearly. And I don't mean that as a flame. Just about anything technological that provides entertainment will find an audience, as evidenced by the still working 8-track portable in my best friend's garage...

that
> sort of atmosphere.

No, it isn't. I'm an avid listener. As someone who has been following radio for years, and listened to it almost obsessively for a very long time, and who longs for the days when every city had a wide selection of stations, each with a different personality, to choose from, I am the one radio people SHOULD be listening to? Or are you going to tell us that only radio people know anything about radio? If that's the case, perhaps you should sit this one out, because radio people are the problem these days.

I read an article on Jim Ladd not too long ago. Jim is one of the greatest DJs in the history of radio, because he knows the music, he loves the music, and he knows what his listeners expect. The troublesome aspect of the article, however, was the Ladd is the ONLY DJ at KLOS to program his own show. A computer spits out every other song for the entire day. And the program director herself is a very accomplished DJ. The truth is, THAT is what's killing broadcast radio, and making people think seriously about

satellite. IF I get it, the $10 a month will not be a major factor, nor will the initial cost of the radio. The factor that will sell it for me will be appropriate variety of music and other programming, and/or whether or not they are able to capture something that has been missing in radio for quite some time.

> For the record, let me just say that I have lived all of
> my life "in the west", and have spent 35 years in the industry. That doesn't
> bestow divine status, but neither does it deserve your two sentence
> dismissal.

I'm afraid it kind of does. I ran retail elecrtronic stores for quite some time, and there is no way I would ever pretend that I could predict whether something new on the market would sell. The reason is, the customers decide. It's the part of radio that radio people seem to have forgotten. Radio companies only care about who's listening and why; they never ask about who's NOT listening and why. Experts predicted Beta over VHS. Laser technology lost out to videotape technology until DVD. Experts predicted that Apple would outsell PC.

As a potential customer who is only moderately involved in the business, (I've worked somewhat sporadically over the years, more as a hobby than anything), I can tell you, unequivocally, that the only thing that will hurt satellite radio is if it's hard to find the hardware. I'm so sick of the wasteland radio has become, it's not even funny. And I'm currently in the Baltimore-Washington market now. When I was in the Tucson and Phoenix markets (often shuttling between the two), I would have given anything for satellite radio. When I lived in Denver, not quite so much, but when I lived in Winter Park, I would have bought it in five seconds.

The fact that you don't think it's a "choice" also demonstrates my point. It IS a choice. And if Clear Channel does the same thng to XM that they've done to their broadcast properties, then someone else will take over and do better. But that does not mean that the technology will go away. If AOL died tomorrow, (a fervent wish of mine for years), the Internet would still survive.

Unlike broadcast radio, the available spectrum for satellite radio, should there develop a sufficient market, is less limited. But I would also point out that one of the best selling points of satellite radio is the 100 (or more) channels available. That makes it less likely (although not impossible) that Clear Channel could homogenize it to the point that it would be worthless. If it has one or two decent progressive music stations, a couple of decent jazz stations, a couple of news stations, one or two non-right wing infected talk stations and maybe a comedy channel, I'm game for spending $10. And look at the line-up I chose above. Clear Channel only owns 5-6 stations, at most, in many markets. Once they've programmed a country station, and oldies station, a right wing talk station, a rock station and a classic rock station, which are all admittedly more popular than what I like, what else is left?
>

Which again points up the problem with the radio industry. Six months ago, NO ONE had satellite radio. Why in God's name would you even CONSIDER "things that might put off potential customers" yet? That's what you do after you're established and you're honing an audience. You're selling something that no one has; the people considering buying it (like me) are looking at the pluses and the minuses. The problem is, the minuses you're mentioning aren't even minuses to most people. One hundred stations is about 100 more than we currently have access to, since getting an XM radio won't sear the knobs off of my AM/FM radio. The sound quality is not a major factor, since digital AM/FM won't be a reality for a while, and frankly when

I'm tooling down the road at 70 MPH, I can't hear every nuance of the music, even from a CD. And price? Please. Ten dollars is about the same as $2 was about 20 years ago.

> seem to indicate elsewhere in your post.

Not true at all. I'm already listening to it on my digital cable as I work in my home. I don't need it at this point. I don't drive enough these days to put one in there, and while I'm home, most of the time I work in silence, and for those occasional times when I let myself be distracted, MusicChoice on Comcast digital cable is sufficient.
>
> How interesting that you adamantly defend a product against perceived
> attackers that you don't even personally find worthy of your patronage!

It's not just a product; it's a technology. And it is a really viable technology that will survive XM and Sirius, the way cellular technology survived Pacific Bell and AT&T. There IS a substantial potential audience here, it is a very viable technology, and the minor flaws that anti-satellite people keep citing are not sufficient. YOU have a problem with sound quality; yet most people have tiny little stereos they paid $150 for, and stock radios in their cars, meaning that MOST PEOPLE will not have a problem with sound quality. Others have a problem with the $10 a month, and yet, most people are paying $300 a month for a car loan, and upwards of $200 a month for gas an electric every month. And $250 for an XM receiver is slightly steep, but to be the first to have something like this, people paid $1000 for VCRs, $300 for cordless phones, $250 for an answering machine and $7000 for HDTV. Hard to believe that people with a Visa card will be daunted by $250-300 for an XM adaptor. (I remember when FM adaptors fors came out when I was a child; they ran about $30-40 which, when adjusted for inflation, is about the same as $250 now.

And the fact that I don't have XM means nothing. I also don't have a laptop. Not because it's not a viable technology, but because it's not useful for me currently.

Just removing the ratings driven formatics makes a big difference; it
affects playlist size, how to sell and positon, attitude, and many other
factors.

> It most certainly is. One of the most commonly used terms in the Internet
> culture of the past few years is "Internet radio."

And it's an oxymoron. It would be more correctly called Internet
Audio. "Radio" is not carried by wires; it is transmitted through the
aether.

> Language is never stagnant. Words and grammar evolve with time, technology and
> culture. It's been that way since homo sapiens learned how to communicate
> vocally. However, a dictionary, by its very nature, is stuck in the time of

> there is no such thing.

But words also have acceptred definitions, and "radio" is not
distributed by the Internet no matter how many people call it Internet
Radio. Only Audio is.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Probably not 100% either.

I don't think that the "talent" in AM/FM radio is a one-trick dog. Given their head, I see them doing better things than we've heard from them in advertiser-driven radio.

The subscription business model allows formats which are not (and may never have been) viable on advertiser-supported radio. I don't see a strong argument for putting the 18-35 mass-appeal formats on satellite.

But there are a lot of other formats. I know 5 people who subscribe to XM, all are over age 55. They are willing to pay to avoid AM/FM radio which almost never caters to them.

My favorite channels, XM4 and XM73, couldn't exist if advertiser support were needed. I can find 3 hours a week of something vaguely similar to XM4 on a local NPR station, but that's it.

I'm willing to pay to hear these channels. Is the aggregate of people who have niche tastes [or live in the boonies] large enough to sustain XM / Sirius. We'll see.

Bob C.

Then stop posting them Tom. You said I lied, yet you provided no proof or Links as you demand of others. You start the flame then cry to Momma or the moderator as it may be, when responded to. I never said you worked for XM but you have posted their PR Fluff propaganda unedited on other newsgroups without, by your own admission even reading it before posting it. If you don't work for XM and don't want to be accused of it, stop shilling for them. I believe it was Mrs. Leland who called XM, asked for you by name and was put through to ya voicemail where as I recall it said, "hi this is Tom leave your message". Your argument is with her or the XM switchboard putting calls directly through to your alleged voicemail. Could be a cosmic coincidence that XM has a Tom Rickets and there is someone posting XM PR Fluff propaganda drivel here on USENET and your're not the same person. Hey I believe Art Bell, so you could probably tell me it was Black Helicopters that engineered the whole scheme and all of us on this forum would believe it.

I've always posted my sources and the latest on XM and Sirius can be found on page 14 May 8th edition of Radio World. Now before you flame Radio World, remember that you and the XM Cult worshipers are now claiming that XM is "radio" so the dire financial news of XM's demise would rightly belong in RADIO WORLD. Since it is a RADIO PUBLICATION. (am I losing you yet?) If you are going to claim that Radio World is biased about radio topics then XM shouldn't be discussed on a Radio Broadcast forum as it wouldn't be radio now would it?. Can't have it both ways. Or you can call up KPMG LLP as they did the audit on XM and used XM's own words to determine there was a problem that made the stock plunge 13%.

You have never cited any sources, nor examples when you flame me and claim that I have "lied". You just go on and on and on with rambling disertations about who struck John nonsense. If you want the flames to stop. STOP POSTING THEM and making false accusations. YOU CITE YOUR SOURCES if you demand it of others.

Those XM receivers you've got will make great paper weights for all those resume's you'll be sending out real soon!

Sirius has no wacky DJ crap. Five or six songs, quick ID, back to the music.
Their play list swamps anything on FM.

Did my research and the quality of the music being played on Sirius channels is very close to what I've been enjoying on DMX for the last 7 years. Whether the music channel programmers come from old commercial radio makes no difference at all. Their agenda is to improve on and not duplicate old style music radio programming. Once again you display your lack of knowledge when it comes to any type of satellite delivered music service. Stick to your funky talk radio crap at your new job across the river in (planet) Newark, New Jersey.

There are lots of people who have left terrestrial broadcasting who
might return if there were decent money available.

You're trying to force a black and white question when you don't have
a black and white issue.

Obviously its not "all new." We've had satellite distribution for
sometime now, the current difference is that the end user gets the
programming without terrestrial rebroadcast.

The folks that pretty much aren't in the mix in this "new" technology
are the advertisers, which are no longer driving the formats because
they're looking for a particular demographic.

Here, again, is the error of your analysis. The losses might be significant if they had to pay them back (which is what I assume you mean by "cover the enormous losses."). However, the loses were not financed by debet but by equity. Shareholders invested money and this money was and is being used to cover the startup costs of XM and Sirius.

There are no losses to "climb out of" and no losses "to cover" as the financing is via equity.

> I've checked with brokers this week and I can't find a one that can

Funny, but my financial advisor (who is not just there to get a commission on a trade) considers XM and Sirius to be speculative plays that are fortunatly being perceived as not being part of the general tech sector.

The models have XM profitable in 2005. This was pretty well thrashed over at the Kagan conference in NY earlier this year, and analysists projected as many as 30 million users by 2010, far beyond the few million needed for profitability.

Then stop posting them Tom. You said I lied, yet you provided no proof or Links as you demand of others. You start the flame then cry to Momma or the moderator as it may be, when responded to. I never said you worked for XM but you have posted their PR Fluff propaganda unedited on other newsgroups without, by your own admission even reading it before posting it. If you don't work for XM and don't want to be accused of it, stop shilling for them. I believe it was Mrs. Leland who called XM, asked for you by name and was put through to ya voicemail where as I recall it said, "hi this is Tom leave your message". Your argument is with her or the XM switchboard putting calls directly through to your alleged voicemail. Could be a cosmic coincidence that XM has a Tom Rickets and there is someone posting XM PR Fluff propaganda drivel here on USENET and your're not the same person. Hey I believe Art Bell, so you could probably tell me it was Black Helicopters that engineered the whole scheme and all of us on this forum would believe it.

I've always posted my sources and the latest on XM and Sirius can be found on page 14 May 8th edition of Radio World. Now before you flame Radio World, remember that you and the XM Cult worshipers are now claiming that XM is "radio" so the dire financial news of XM's demise would rightly belong in RADIO WORLD. Since it is a RADIO PUBLICATION. (am I losing you yet?) If you are going to claim that Radio World is biased about radio topics then XM shouldn't be discussed on a Radio Broadcast forum as it wouldn't be radio now would it?. Can't have it both ways. Or you can call up KPMG LLP as they did the audit on XM and used XM's own words to determine there was a problem that made the stock plunge 13%.

You have never cited any sources, nor examples when you flame me and claim that I have "lied". You just go on and on and on with rambling disertations about who struck John nonsense. If you want the flames to stop. STOP POSTING THEM and making false accusations. YOU CITE YOUR SOURCES if you demand it of others.

Those XM receivers you've got will make great paper weights for all those resume's you'll be sending out real soon!

Probably not 100% either.

I don't think that the "talent" in AM/FM radio is a one-trick dog. Given their head, I see them doing better things than we've heard from them in advertiser-driven radio.

The subscription business model allows formats which are not (and may never have been) viable on advertiser-supported radio. I don't see a strong argument for putting the 18-35 mass-appeal formats on satellite.

But there are a lot of other formats. I know 5 people who subscribe to XM, all are over age 55. They are willing to pay to avoid AM/FM radio which almost never caters to them.

My favorite channels, XM4 and XM73, couldn't exist if advertiser support were needed. I can find 3 hours a week of something vaguely similar to XM4 on a local NPR station, but that's it.

I'm willing to pay to hear these channels. Is the aggregate of people who have niche tastes [or live in the boonies] large enough to sustain XM / Sirius. We'll see.

Bob C.

Sirius is much more like cable music and DMX. Just a music stream. their services seem to have much broader playlists, and far fewer familiar songs.

Example: I listened to the Sirius salsa/tropical channel last week and did not hear one song I knew in over an hour. Since I built and programmed the first all-salsa station and have programmed the format constantly for over 24 years, that says that the approach is definitely an appeal to more esoteric, less mainstream tastes. Personally, I wanna' hear songs I can sing along with at least part of the time.

And the fact that you think I am only talking about you demonstrates my point. The overall tone of these "observations" is decidedly anti-satellite", since no one could possibly know at this point whether it wil succeed or not. When we give our reasons why it probably will succeed, such as the market for radio in the wide-open areas of the west, and the dearth of decent program on broadcast radio, we are met with "yeah, but..." arguments based on how much money they've lost in less than six months, even though they wisely projected about five years of losses, as they spent enormoous amounts to roll it out. Other arguments against satellite have had to do with paying $10 a month for service and having to endure commercials (forgetting that the infomercial concept was conceived on cable tv) and that sound quality isn't CD quality (apparently forgetting that most media that people pay tons for has the same problem. Think VHS, cassettes and cable TV...

> are you saying that anyone who does not give an unqualified rave opinion
> about the product is "anti-satellite"?

Absolutely. You would pretty much have to be, unless you have psychic abilities. There's no way to tell whether this thing will be successful at this point. But defining success is the trickly part. It they can get 2-3 million subscribers in five years, that's a pretty good base to work from. If receivers drop to less than $100, that will be easy. And if the big radio conglomerates keep homogenizing radio, they'll be serving up listeers by the thousands.

> Are you saying that anyone who
> expresses any doubts whatsoever is anti-satellite? (If you had read any of
> my hundreds of articles on the topic, you would realize that I have
> criticized broadcast radio far more than I have ever praised it.)

I would say that anyone who, in an age where the Internet was a joke a year before it became revolutionary and the DVD has overtaken the VCR in about two years, can even suggest that there is no market for this sort of thing, that $10-12 a month is too much for people to pay, and that there is no chance that there's a market for this sort of thing, is a naysayer, yeah. I'd say that's pretty accurate.

No one is saying that this stuff will instantly replace radio; it doesn't have to. But if you're thinking that out of a population of 285 million enough customers cannot be found to sustain ghr technology until it becomes viable, then you're not thinking clearly. And I don't mean that as a flame. Just about anything technological that provides entertainment will find an audience, as evidenced by the still working 8-track portable in my best friend's garage...

> your qualifications for your opinion and the second half is devoted to
> stating how my qualifications don't count. It is hard to have a meaningful
> discussion about the merits and deficiencies of a product or service in that
> sort of atmosphere.

No, it isn't. I'm an avid listener. As someone who has been following radio for years, and listened to it almost obsessively for a very long time, and who longs for the days when every city had a wide selection of stations, each with a different personality, to choose from, I am the one radio people SHOULD be listening to? Or are you going to tell us that only radio people know anything about radio? If that's the case, perhaps you should sit this one out, because radio people are the problem these days.

I read an article on Jim Ladd not too long ago. Jim is one of the greatest DJs in the history of radio, because he knows the music, he loves the music, and he knows what his listeners expect. The troublesome aspect of the article, however, was the Ladd is the ONLY DJ at KLOS to program his own show. A computer spits out every other song for the entire day. And the program director herself is a very accomplished DJ. The truth is, THAT is what's killing broadcast radio, and making people think seriously about

satellite. IF I get it, the $10 a month will not be a major factor, nor will the initial cost of the radio. The factor that will sell it for me will be appropriate variety of music and other programming, and/or whether or not they are able to capture something that has been missing in radio for quite some time.

> For the record, let me just say that I have lived all of
> my life "in the west", and have spent 35 years in the industry. That doesn't
> bestow divine status, but neither does it deserve your two sentence
> dismissal.

I'm afraid it kind of does. I ran retail elecrtronic stores for quite some time, and there is no way I would ever pretend that I could predict whether something new on the market would sell. The reason is, the customers decide. It's the part of radio that radio people seem to have forgotten. Radio companies only care about who's listening and why; they never ask about who's NOT listening and why. Experts predicted Beta over VHS. Laser technology lost out to videotape technology until DVD. Experts predicted that Apple would outsell PC.

As a potential customer who is only moderately involved in the business, (I've worked somewhat sporadically over the years, more as a hobby than anything), I can tell you, unequivocally, that the only thing that will hurt satellite radio is if it's hard to find the hardware. I'm so sick of the wasteland radio has become, it's not even funny. And I'm currently in the Baltimore-Washington market now. When I was in the Tucson and Phoenix markets (often shuttling between the two), I would have given anything for satellite radio. When I lived in Denver, not quite so much, but when I lived in Winter Park, I would have bought it in five seconds.

> today?

The fact that you don't think it's a "choice" also demonstrates my point. It IS a choice. And if Clear Channel does the same thng to XM that they've done to their broadcast properties, then someone else will take over and do better. But that does not mean that the technology will go away. If AOL died tomorrow, (a fervent wish of mine for years), the Internet would still survive.

Unlike broadcast radio, the available spectrum for satellite radio, should there develop a sufficient market, is less limited. But I would also point out that one of the best selling points of satellite radio is the 100 (or more) channels available. That makes it less likely (although not impossible) that Clear Channel could homogenize it to the point that it would be worthless. If it has one or two decent progressive music stations, a couple of decent jazz stations, a couple of news stations, one or two non-right wing infected talk stations and maybe a comedy channel, I'm game for spending $10. And look at the line-up I chose above. Clear Channel only owns 5-6 stations, at most, in many markets. Once they've programmed a country station, and oldies station, a right wing talk station, a rock station and a classic rock station, which are all admittedly more popular than what I like, what else is left?

Which again points up the problem with the radio industry. Six months ago, NO ONE had satellite radio. Why in God's name would you even CONSIDER "things that might put off potential customers" yet? That's what you do after you're established and you're honing an audience. You're selling something that no one has; the people considering buying it (like me) are looking at the pluses and the minuses. The problem is, the minuses you're mentioning aren't even minuses to most people. One hundred stations is about 100 more than we currently have access to, since getting an XM radio won't sear the knobs off of my AM/FM radio. The sound quality is not a major factor, since digital AM/FM won't be a reality for a while, and frankly when

I'm tooling down the road at 70 MPH, I can't hear every nuance of the music, even from a CD. And price? Please. Ten dollars is about the same as $2 was about 20 years ago.

> For me,

> seem to indicate elsewhere in your post.

Not true at all. I'm already listening to it on my digital cable as I work in my home. I don't need it at this point. I don't drive enough these days to put one in there, and while I'm home, most of the time I work in silence, and for those occasional times when I let myself be distracted, MusicChoice on Comcast digital cable is sufficient.
>
> How interesting that you adamantly defend a product against perceived
> attackers that you don't even personally find worthy of your patronage!

It's not just a product; it's a technology. And it is a really viable technology that will survive XM and Sirius, the way cellular technology survived Pacific Bell and AT&T. There IS a substantial potential audience here, it is a very viable technology, and the minor flaws that anti-satellite people keep citing are not sufficient. YOU have a problem with sound quality; yet most people have tiny little stereos they paid $150 for, and stock radios in their cars, meaning that MOST PEOPLE will not have a problem with sound quality. Others have a problem with the $10 a month, and yet, most people are paying $300 a month for a car loan, and upwards of $200 a month for gas an electric every month. And $250 for an XM receiver is slightly steep, but to be the first to have something like this, people paid $1000 for VCRs, $300 for cordless phones, $250 for an answering machine and $7000 for HDTV. Hard to believe that people with a Visa card will be daunted by $250-300 for an XM adaptor. (I remember when FM adaptors fors came out when I was a child; they ran about $30-40 which, when adjusted for inflation, is about the same as $250 now.

And the fact that I don't have XM means nothing. I also don't have a laptop. Not because it's not a viable technology, but because it's not useful for me currently.

Did my research and the quality of the music being played on Sirius channels is very close to what I've been enjoying on DMX for the last 7 years. Whether the music channel programmers come from old commercial radio makes no difference at all. Their agenda is to improve on and not duplicate old style music radio programming. Once again you display your lack of knowledge when it comes to any type of satellite delivered music service. Stick to your funky talk radio crap at your new job across the river in (planet) Newark, New Jersey.

And it's an oxymoron. It would be more correctly called Internet
Audio. "Radio" is not carried by wires; it is transmitted through the
aether.

> Language is never stagnant. Words and grammar evolve with time, technology and

Sirius has no wacky DJ crap. Five or six songs, quick ID, back to the music.
Their play list swamps anything on FM.

> only, not make it profitable, but just cover the enormous losses.

Here, again, is the error of your analysis. The losses might be significant if they had to pay them back (which is what I assume you mean by "cover the enormous losses."). However, the loses were not financed by debet but by equity. Shareholders invested money and this money was and is being used to cover the startup costs of XM and Sirius.

There are no losses to "climb out of" and no losses "to cover" as the financing is via equity.

> I've checked with brokers this week and I can't find a one that can

> pay satellite services making any money before the year 2525.

Funny, but my financial advisor (who is not just there to get a commission on a trade) considers XM and Sirius to be speculative plays that are fortunatly being perceived as not being part of the general tech sector.

The models have XM profitable in 2005. This was pretty well thrashed over at the Kagan conference in NY earlier this year, and analysists projected as many as 30 million users by 2010, far beyond the few million needed for profitability.

1572. Re: Satellite Radio---So who is going to survive?

I seldom post here, but I want to reiterate something I said months ago: XM has been pushed as radio for people disgusted with radio -- that is, connoisseurs and record collectors and radio buffs to get enthused about again, after years of increasing Infinity and Clear Channel decimation of the programming side of terrestrial broadcast.

As a classical music lover, I desperately wanted XM to succeed as an alternative to dumbed-down NPR affiliates. Who did XM hire to head their classical channels? Martin Goldsmith of NPR. Who did XM hire to head their programming side? Lee Abrams. What a sham.

Now, a friend tells me the story of a friend of _his_, who worked for Sirius in their engineering department, and left shortly after someone from management came down one day and said, "Double the number of channels." He saw the handwriting on the wall and left.

As long as _neither_ XM nor Sirius devote at least some of their spectrum to the highest quality standards in bandwidth rate and programming excellence, then there's no point to even consider forking over $200 for a one-time investment, let alone $220/year for crap.

XM is just a rehashing of todays AM and FM garbage. Their in bed with
Clear Channel so what else could you expect. Sirius has bigger and more
progressive ideas and the classical music channel will steal a little more
bandwidth. The full year subscription for Sirius is $149.99 plus a one time
startup fee of $15.00.
Who pays $220 a year, for what?

> observations and ask questions?

And the fact that you think I am only talking about you demonstrates my point. The overall tone of these "observations" is decidedly anti-satellite", since no one could possibly know at this point whether it wil succeed or not. When we give our reasons why it probably will succeed, such as the market for radio in the wide-open areas of the west, and the dearth of decent program on broadcast radio, we are met with "yeah, but..." arguments based on how much money they've lost in less than six months, even though they wisely projected about five years of losses, as they spent enormoous amounts to roll it out. Other arguments against satellite have had to do with paying $10 a month for service and having to endure commercials (forgetting that the infomercial concept was conceived on cable tv) and that sound quality isn't CD quality (apparently forgetting that most media that people pay tons for has the same problem. Think VHS, cassettes and cable TV...

> about the product is "anti-satellite"?

Absolutely. You would pretty much have to be, unless you have psychic abilities. There's no way to tell whether this thing will be successful at this point. But defining success is the trickly part. It they can get 2-3 million subscribers in five years, that's a pretty good base to work from. If receivers drop to less than $100, that will be easy. And if the big radio conglomerates keep homogenizing radio, they'll be serving up listeers by the thousands.

> Are you saying that anyone who
> expresses any doubts whatsoever is anti-satellite? (If you had read any of
> my hundreds of articles on the topic, you would realize that I have
> criticized broadcast radio far more than I have ever praised it.)

I would say that anyone who, in an age where the Internet was a joke a year before it became revolutionary and the DVD has overtaken the VCR in about two years, can even suggest that there is no market for this sort of thing, that $10-12 a month is too much for people to pay, and that there is no chance that there's a market for this sort of thing, is a naysayer, yeah. I'd say that's pretty accurate.

No one is saying that this stuff will instantly replace radio; it doesn't have to. But if you're thinking that out of a population of 285 million enough customers cannot be found to sustain ghr technology until it becomes viable, then you're not thinking clearly. And I don't mean that as a flame. Just about anything technological that provides entertainment will find an audience, as evidenced by the still working 8-track portable in my best friend's garage...

> sort of atmosphere.

No, it isn't. I'm an avid listener. As someone who has been following radio for years, and listened to it almost obsessively for a very long time, and who longs for the days when every city had a wide selection of stations, each with a different personality, to choose from, I am the one radio people SHOULD be listening to? Or are you going to tell us that only radio people know anything about radio? If that's the case, perhaps you should sit this one out, because radio people are the problem these days.

I read an article on Jim Ladd not too long ago. Jim is one of the greatest DJs in the history of radio, because he knows the music, he loves the music, and he knows what his listeners expect. The troublesome aspect of the article, however, was the Ladd is the ONLY DJ at KLOS to program his own show. A computer spits out every other song for the entire day. And the program director herself is a very accomplished DJ. The truth is, THAT is what's killing broadcast radio, and making people think seriously about

satellite. IF I get it, the $10 a month will not be a major factor, nor will the initial cost of the radio. The factor that will sell it for me will be appropriate variety of music and other programming, and/or whether or not they are able to capture something that has been missing in radio for quite some time.

> For the record, let me just say that I have lived all of
> my life "in the west", and have spent 35 years in the industry. That doesn't
> bestow divine status, but neither does it deserve your two sentence
> dismissal.

I'm afraid it kind of does. I ran retail elecrtronic stores for quite some time, and there is no way I would ever pretend that I could predict whether something new on the market would sell. The reason is, the customers decide. It's the part of radio that radio people seem to have forgotten. Radio companies only care about who's listening and why; they never ask about who's NOT listening and why. Experts predicted Beta over VHS. Laser technology lost out to videotape technology until DVD. Experts predicted that Apple would outsell PC.

As a potential customer who is only moderately involved in the business, (I've worked somewhat sporadically over the years, more as a hobby than anything), I can tell you, unequivocally, that the only thing that will hurt satellite radio is if it's hard to find the hardware. I'm so sick of the wasteland radio has become, it's not even funny. And I'm currently in the Baltimore-Washington market now. When I was in the Tucson and Phoenix markets (often shuttling between the two), I would have given anything for satellite radio. When I lived in Denver, not quite so much, but when I lived in Winter Park, I would have bought it in five seconds.

> today?

The fact that you don't think it's a "choice" also demonstrates my point. It IS a choice. And if Clear Channel does the same thng to XM that they've done to their broadcast properties, then someone else will take over and do better. But that does not mean that the technology will go away. If AOL died tomorrow, (a fervent wish of mine for years), the Internet would still survive.

Unlike broadcast radio, the available spectrum for satellite radio, should there develop a sufficient market, is less limited. But I would also point out that one of the best selling points of satellite radio is the 100 (or more) channels available. That makes it less likely (although not impossible) that Clear Channel could homogenize it to the point that it would be worthless. If it has one or two decent progressive music stations, a couple of decent jazz stations, a couple of news stations, one or two non-right wing infected talk stations and maybe a comedy channel, I'm game for spending $10. And look at the line-up I chose above. Clear Channel only owns 5-6 stations, at most, in many markets. Once they've programmed a country station, and oldies station, a right wing talk station, a rock station and a classic rock station, which are all admittedly more popular than what I like, what else is left?
>

Which again points up the problem with the radio industry. Six months ago, NO ONE had satellite radio. Why in God's name would you even CONSIDER "things that might put off potential customers" yet? That's what you do after you're established and you're honing an audience. You're selling something that no one has; the people considering buying it (like me) are looking at the pluses and the minuses. The problem is, the minuses you're mentioning aren't even minuses to most people. One hundred stations is about 100 more than we currently have access to, since getting an XM radio won't sear the knobs off of my AM/FM radio. The sound quality is not a major factor, since digital AM/FM won't be a reality for a while, and frankly when

I'm tooling down the road at 70 MPH, I can't hear every nuance of the music, even from a CD. And price? Please. Ten dollars is about the same as $2 was about 20 years ago.

> For me,
> it is the audio quality. For you, it is apparently the non-portability
> issue. But is it really? You could easily put a unit in your home. The
fact

> seem to indicate elsewhere in your post.

Not true at all. I'm already listening to it on my digital cable as I work in my home. I don't need it at this point. I don't drive enough these days to put one in there, and while I'm home, most of the time I work in silence, and for those occasional times when I let myself be distracted, MusicChoice on Comcast digital cable is sufficient.
>
> How interesting that you adamantly defend a product against perceived
> attackers that you don't even personally find worthy of your patronage!

It's not just a product; it's a technology. And it is a really viable technology that will survive XM and Sirius, the way cellular technology survived Pacific Bell and AT&T. There IS a substantial potential audience here, it is a very viable technology, and the minor flaws that anti-satellite people keep citing are not sufficient. YOU have a problem with sound quality; yet most people have tiny little stereos they paid $150 for, and stock radios in their cars, meaning that MOST PEOPLE will not have a problem with sound quality. Others have a problem with the $10 a month, and yet, most people are paying $300 a month for a car loan, and upwards of $200 a month for gas an electric every month. And $250 for an XM receiver is slightly steep, but to be the first to have something like this, people paid $1000 for VCRs, $300 for cordless phones, $250 for an answering machine and $7000 for HDTV. Hard to believe that people with a Visa card will be daunted by $250-300 for an XM adaptor. (I remember when FM adaptors fors came out when I was a child; they ran about $30-40 which, when adjusted for inflation, is about the same as $250 now.

And the fact that I don't have XM means nothing. I also don't have a laptop. Not because it's not a viable technology, but because it's not useful for me currently.

While I generally agree with most things you write, doesn't your company supply content for XM? If so, that's a fairly close relationship in my mind. I doubt that any of the other "pro" people are anyway near as close to XM.

I own stock in Boeing, Boeing launched the XM satellites, and XM owes them some money - but I don't think that makes me an XM shill.

Pretty fancy footwork.

Yeh, but so are x-rays, etc, etc.

The technology for optical vs radio systems is so completely different
that I doubt if you can find anyone who yet lumps them together. I'll
concede your point only when I can buy an inexpensive superheterodyne
optical receiver off the shelf.

Have you seen an optical detector that is anything but a power detector?

Probably not 100% either.

I don't think that the "talent" in AM/FM radio is a one-trick dog. Given their head, I see them doing better things than we've heard from them in advertiser-driven radio.

The subscription business model allows formats which are not (and may never have been) viable on advertiser-supported radio. I don't see a strong argument for putting the 18-35 mass-appeal formats on satellite.

But there are a lot of other formats. I know 5 people who subscribe to XM, all are over age 55. They are willing to pay to avoid AM/FM radio which almost never caters to them.

My favorite channels, XM4 and XM73, couldn't exist if advertiser support were needed. I can find 3 hours a week of something vaguely similar to XM4 on a local NPR station, but that's it.

I'm willing to pay to hear these channels. Is the aggregate of people who have niche tastes [or live in the boonies] large enough to sustain XM / Sirius. We'll see.

And the fact that you think I am only talking about you demonstrates my point. The overall tone of these "observations" is decidedly anti-satellite", since no one could possibly know at this point whether it wil succeed or not. When we give our reasons why it probably will succeed, such as the market for radio in the wide-open areas of the west, and the dearth of decent program on broadcast radio, we are met with "yeah, but..." arguments based on how much money they've lost in less than six months, even though they wisely projected about five years of losses, as they spent enormoous amounts to roll it out. Other arguments against satellite have had to do with paying $10 a month for service and having to endure commercials (forgetting that the infomercial concept was conceived on cable tv) and that sound quality isn't CD quality (apparently forgetting that most media that people pay tons for has the same problem. Think VHS, cassettes and cable TV...

> about the product is "anti-satellite"?

Absolutely. You would pretty much have to be, unless you have psychic abilities. There's no way to tell whether this thing will be successful at this point. But defining success is the trickly part. It they can get 2-3 million subscribers in five years, that's a pretty good base to work from. If receivers drop to less than $100, that will be easy. And if the big radio conglomerates keep homogenizing radio, they'll be serving up listeers by the thousands.

> Are you saying that anyone who
> expresses any doubts whatsoever is anti-satellite? (If you had read any of
> my hundreds of articles on the topic, you would realize that I have
> criticized broadcast radio far more than I have ever praised it.)

I would say that anyone who, in an age where the Internet was a joke a year before it became revolutionary and the DVD has overtaken the VCR in about two years, can even suggest that there is no market for this sort of thing, that $10-12 a month is too much for people to pay, and that there is no chance that there's a market for this sort of thing, is a naysayer, yeah. I'd say that's pretty accurate.

No one is saying that this stuff will instantly replace radio; it doesn't have to. But if you're thinking that out of a population of 285 million enough customers cannot be found to sustain ghr technology until it becomes viable, then you're not thinking clearly. And I don't mean that as a flame. Just about anything technological that provides entertainment will find an audience, as evidenced by the still working 8-track portable in my best friend's garage...

> sort of atmosphere.

No, it isn't. I'm an avid listener. As someone who has been following radio for years, and listened to it almost obsessively for a very long time, and who longs for the days when every city had a wide selection of stations, each with a different personality, to choose from, I am the one radio people SHOULD be listening to? Or are you going to tell us that only radio people know anything about radio? If that's the case, perhaps you should sit this one out, because radio people are the problem these days.

I read an article on Jim Ladd not too long ago. Jim is one of the greatest DJs in the history of radio, because he knows the music, he loves the music, and he knows what his listeners expect. The troublesome aspect of the article, however, was the Ladd is the ONLY DJ at KLOS to program his own show. A computer spits out every other song for the entire day. And the program director herself is a very accomplished DJ. The truth is, THAT is what's killing broadcast radio, and making people think seriously about

satellite. IF I get it, the $10 a month will not be a major factor, nor will the initial cost of the radio. The factor that will sell it for me will be appropriate variety of music and other programming, and/or whether or not they are able to capture something that has been missing in radio for quite some time.

> For the record, let me just say that I have lived all of
> my life "in the west", and have spent 35 years in the industry. That doesn't
> bestow divine status, but neither does it deserve your two sentence
> dismissal.

I'm afraid it kind of does. I ran retail elecrtronic stores for quite some time, and there is no way I would ever pretend that I could predict whether something new on the market would sell. The reason is, the customers decide. It's the part of radio that radio people seem to have forgotten. Radio companies only care about who's listening and why; they never ask about who's NOT listening and why. Experts predicted Beta over VHS. Laser technology lost out to videotape technology until DVD. Experts predicted that Apple would outsell PC.

As a potential customer who is only moderately involved in the business, (I've worked somewhat sporadically over the years, more as a hobby than anything), I can tell you, unequivocally, that the only thing that will hurt satellite radio is if it's hard to find the hardware. I'm so sick of the wasteland radio has become, it's not even funny. And I'm currently in the Baltimore-Washington market now. When I was in the Tucson and Phoenix markets (often shuttling between the two), I would have given anything for satellite radio. When I lived in Denver, not quite so much, but when I lived in Winter Park, I would have bought it in five seconds.

> today?

The fact that you don't think it's a "choice" also demonstrates my point. It IS a choice. And if Clear Channel does the same thng to XM that they've done to their broadcast properties, then someone else will take over and do better. But that does not mean that the technology will go away. If AOL died tomorrow, (a fervent wish of mine for years), the Internet would still survive.

Unlike broadcast radio, the available spectrum for satellite radio, should there develop a sufficient market, is less limited. But I would also point out that one of the best selling points of satellite radio is the 100 (or more) channels available. That makes it less likely (although not impossible) that Clear Channel could homogenize it to the point that it would be worthless. If it has one or two decent progressive music stations, a couple of decent jazz stations, a couple of news stations, one or two non-right wing infected talk stations and maybe a comedy channel, I'm game for spending $10. And look at the line-up I chose above. Clear Channel only owns 5-6 stations, at most, in many markets. Once they've programmed a country station, and oldies station, a right wing talk station, a rock station and a classic rock station, which are all admittedly more popular than what I like, what else is left?
>

Which again points up the problem with the radio industry. Six months ago, NO ONE had satellite radio. Why in God's name would you even CONSIDER "things that might put off potential customers" yet? That's what you do after you're established and you're honing an audience. You're selling something that no one has; the people considering buying it (like me) are looking at the pluses and the minuses. The problem is, the minuses you're mentioning aren't even minuses to most people. One hundred stations is about 100 more than we currently have access to, since getting an XM radio won't sear the knobs off of my AM/FM radio. The sound quality is not a major factor, since digital AM/FM won't be a reality for a while, and frankly when

I'm tooling down the road at 70 MPH, I can't hear every nuance of the music, even from a CD. And price? Please. Ten dollars is about the same as $2 was about 20 years ago.

> For me,
> it is the audio quality. For you, it is apparently the non-portability
> issue. But is it really? You could easily put a unit in your home. The
fact
> that you don't tells me that you are not REALLY quite as sold on it as you
> seem to indicate elsewhere in your post.

Not true at all. I'm already listening to it on my digital cable as I work in my home. I don't need it at this point. I don't drive enough these days to put one in there, and while I'm home, most of the time I work in silence, and for those occasional times when I let myself be distracted, MusicChoice on Comcast digital cable is sufficient.
>
> How interesting that you adamantly defend a product against perceived
> attackers that you don't even personally find worthy of your patronage!

It's not just a product; it's a technology. And it is a really viable technology that will survive XM and Sirius, the way cellular technology survived Pacific Bell and AT&T. There IS a substantial potential audience here, it is a very viable technology, and the minor flaws that anti-satellite people keep citing are not sufficient. YOU have a problem with sound quality; yet most people have tiny little stereos they paid $150 for, and stock radios in their cars, meaning that MOST PEOPLE will not have a problem with sound quality. Others have a problem with the $10 a month, and yet, most people are paying $300 a month for a car loan, and upwards of $200 a month for gas an electric every month. And $250 for an XM receiver is slightly steep, but to be the first to have something like this, people paid $1000 for VCRs, $300 for cordless phones, $250 for an answering machine and $7000 for HDTV. Hard to believe that people with a Visa card will be daunted by $250-300 for an XM adaptor. (I remember when FM adaptors fors came out when I was a child; they ran about $30-40 which, when adjusted for inflation, is about the same as $250 now.

And the fact that I don't have XM means nothing. I also don't have a laptop. Not because it's not a viable technology, but because it's not useful for me currently.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

I seldom post here, but I want to reiterate something I said months ago: XM has been pushed as radio for people disgusted with radio -- that is, connoisseurs and record collectors and radio buffs to get enthused about again, after years of increasing Infinity and Clear Channel decimation of the programming side of terrestrial broadcast.

As a classical music lover, I desperately wanted XM to succeed as an alternative to dumbed-down NPR affiliates. Who did XM hire to head their classical channels? Martin Goldsmith of NPR. Who did XM hire to head their programming side? Lee Abrams. What a sham.

Now, a friend tells me the story of a friend of _his_, who worked for Sirius in their engineering department, and left shortly after someone from management came down one day and said, "Double the number of channels." He saw the handwriting on the wall and left.

As long as _neither_ XM nor Sirius devote at least some of their spectrum to the highest quality standards in bandwidth rate and programming excellence, then there's no point to even consider forking over $200 for a one-time investment, let alone $220/year for crap.

>It would be more correctly called Internet Audio. "Radio" is not carried by wires; it is transmitted through the aether.<

No, Internet radio is carried via the Internet. You may not like it, but that's what it's called. That's exactly what I meant about the evolution of language. The meanings of words change over time.

>But words also have acceptred definitions, and "radio" is not distributed by the Internet no matter how many people call it Internet Radio. Only Audio is.<

Words have accepted definitions because someone printed them in a dictionary...etching them in stone. Language doesn't work like that.

1588. Very old Scotch/3M music "library" and message repeater

Have two machines (by my guesstimate 30+/-yrs) One is a 3M "Contempo Music Library" which looks to be a reel to reel loop machine, and the other a funky 3M (cart media) message repeater (complete with telephone handset for a mic). I have pics if anyone is interested. Are these of any worth to anyone, or are they just dumpster material? Any info would be appreciated!

They're not "in bed" with Clear Channel. Clear has less than 5% of the XM stock; most of the XM outside providers, including Radio One and HBC, have small investments in XM.

Eduardo, I hate to see you continue to lose credibility with these kinds of false posts. It was, it you bothered to read, Mrs. Leland of Cox Communications that called XM and said she asked for Tom Rickets and got his voice mail. NOT ME! I've only quoted Mrs. Leland. Mrs. Leland has been around broadcasting for a long-long time and I'd take her word over some XM xenophobe anytime.

Now lets not try to the slight of hand you are so adept at, and can you reiterate your stock holdings in XM for everyone. Especially after the statement where you claim you don't know anyone that works for XM on this newsgroup?

You've made my point for me very well, and I thank you for it. ANYONE that is critical of XM is viscously attacked and flamed by the XM crowd. You and Tom continue to post false information about me and make this personal, while I post factual information about the dire,

critical financial straits that both XM and Sirius find themselves in. While the XM Employees and Stockholders like yourself try to "spin" the story away from the facts and into something personal and deameaning.

Honestly, were I you or one of the XM employees, I'd be talking to my broker and getting those resume's out real fast and not worry so much about what is posted on a USENET forum. All of you XM people have much bigger things to worry about and spend time on. However, it does prove the point that the XM people can't focus on what is important, and thus, the gloomy financial picture they find themselves in. You might take those internet computers out of the XM offices and see an increase in productivity immediately.

Guys,

In the grand scheme of things, I don't think this "political correctness" really matters in terms of defining whether or not Internet Radio should / should not be called "radio".

While the means of transmission may not be wireless, the "idea" of radio still remains. By that I mean most Internet Webcasters try to program and / or operate their stations in the same / similar fashion as terrestrialcasters.

HBC is not my company. It is one of the companies I work for, but I only
wish I owned it. I do not, however, work for XM. I supervise the programming
of the 5 Latin music channels, as I have mentioned many previous times. This
gives me certain insight into the fact that, among other things, 1) XM is
not controlled by Clear Channel, 2) the foramts are very un-radio with long
playlists, losts of deep cuts and none of the irritationg over-sell
techniques of some terrestrial staitons, and, 3) I know that subscribers are
very happy in the most part as we get loads of "fan mail" form the users of
our channels.

I still don't work for XM.

>
> I own stock in Boeing, Boeing launched the XM satellites, and XM owes

Our terrestrial stations sell advertising to Budweiser. That does not make
me an alcoholic.

Nice try, but words don't just lose their root origins for the convenience
of trendy endeavor. If you want to call it "Internet broadcasting", that
would be legitimate. But to hijack a word that shares a root with
"radiation" is stretching things. Internet broadcasting is simply a
high-tech method for wiring up a large number of listening locations
carrying a common audio source. We don't call a PA system "radio".

> Words have accepted definitions because someone printed them in a
> dictionary...etching them in stone. Language doesn't work like that.

OK...I'll accept a major dictionary's blessing of the term "internet radio".
Reference?

Come on David, stop the spin doctoring. You should know that KPMG LLP is one of the biggest accounting/financial consulting firms in the WORLD! At least, based on your resume you post here constantly, you should know that. They know what exactly what is acceptable to comply with accounting rules and XM blew it!

Do you really think the stock would plummet 13% if the Joe Shmo Accounting and Lubrication Co. did the audit?

XM is in deep trouble and no amount of "oh what this really means is" type of explaining by you is going to change it. Do you really think you are the only one here who has bought and sold stations and has a grasp of the financial world? Sometimes it appears that way. Get over it, XM is going down the tubes and KPMG LLP only told us the obvious.

I didn't realize equipment expense defined radio. The technology for AM (medium wave) transmission and microwave transmission are not even remotely similar but they are both radio.

> Have you seen an optical detector that is anything but a power detector?

Yes, I have. Your point?

That's interesting. Oh, to be fifty-five again...but I certainly don't see any attempt to program to senior citizens on the part of XM. The formats that I might enjoy are bland and not nearly as good as the segmented shows on our community radio stations. And then there is that problem with the digital...

> I'm willing to pay to hear these channels. Is the aggregate of people

Yes, indeed. And the next question to ask is, "will it stay that way?" My guess is that at some point, the investors of XM/Sirius will want to start making it pay better. I leave it as an exercise for the reader as to how they might do that.

Finally, broadcast radio is not a stationary target. It can, itself, adjust and conform to the marketplace.

You could do the same thing with an amplifier, several LONG wires and
some speakers, but it wouldn't make it "radio", would it? Neither is
"Internet Radio". It's audio distribution. Period. An "idea" doesn't
make a reality.

And what's this "political correctness" crap? I'm the farthest from
politically correct, but I do know what an accepted definition means.
"Internet radio" is strictly an oxymoron, not a reality.

Those who make use of "internet radio" might as well listen to
themselves on their living-room stereo and try to believe that they're
broadcasting! Typical "kids playing radio".

> digital...

No attempt to program to them, huh? Among the channels available (according
to their channel lineup --
http://www.xmradio.com/programming/full_channel_listing.jsp?sort=number)
are;

Channel 4 -- Hits of the 40s.
Channel 5 -- Hits of the 50s
Channel 10 -- Classic country
Channel 28 -- Broadway & Showtunes
Channel 70 -- Traditional Jazz
Channel 73 -- Frank's Place -- Sinatra & Friends
Channels 110-113 -- Classical
Channel 120 -- XM News
Channel 121 -- USA Today News
Channel 122 -- FOX News
Channel 123 -- CNN Headline News
Channel 125 -- The Weather Channel
Channel 127 -- CNBC
Channel 128 -- CNNfn
Channel 129 -- Bloomberg
Channel 132 -- C-SPAN Radio
Channel 140 -- ESPN Radio
Channel 141 -- CNN/SI
Channel 142 -- FOX Sports Radio
Channel 143 -- Sporting News
Channel 151 -- Laugh USA (Family comedy)
Channel 161 -- Discovery Radio
Channel 162 -- E! Entertainment Radio
Channel 164 -- ABC News & Talk
Channel 165 -- Ask! (Experts talk)
Channel 166 -- Buzz XM (Talk)

Channel 167 -- BabbleOn (Talk)
Channel 170 -- Christian Talk

Okay, so the question is, if a senior citizen misses their beautiful music, only has access to one talk station and no news on the radio, and misses classical or jazz, or absolutely loves showtunes, what's not to like about the above listing?

Plus, I envision XM and/or Sirius offering sports packages at some point,so that the people from Chicago who moved to Arizona or California can actually listen to Cubs games out by the pool, or Yankees fans in Montana can hear every game for a reasonable price per month.
>
> > I'm willing to pay to hear these channels. Is the aggregate of people

Commercials. Yeah, so? Broadcast has had them for years. If the choice is free and commercials, with no choice in subject matter, or more choice and $10 a month, a lot of people (not all, certainly) will take the more choice. Ten dollars a month is not a lot of money these days. And if it gives me the option of switching to the news when I want, instead of when Infinity decides they'll give it to me, then that's a plus for me.

> Finally, broadcast radio is not a stationary target. It can, itself,
adjust
> and conform to the marketplace.
>
Yes, it can. But I'm curious; why do you see this as an either/or thing for you. cable and broadcast TV have lived side by side for 25 years now, and neither one is going anywhere. People switch between AM and FM bands all of the time; they could just as easily switch between AM/FM/XM or Sirius. I'm not going to stop listening to the Orioles on AM if I get a Sirius Radio, but if I could use XM or Sirius to pick up the Denver Broncos games that aren't on TV on the East Coast (instead of paying $150 for NFL Sunday Ticket, maybe $50 a season for radio games), it would be well worth it.

I also think this will provide the impetus radio people need to get their collective heads out of their collective butts and start programming for the people.

XM/Sirius could never do this.

Remember that sports events are very well protected (regarding the
area of the country in which you live).

The only reason you are able to order "NFL Season Ticket", or "MLB
Extra Innings" via DirecTv is the fact that you are connecting your
receiver to a land based phoneline that confirms you are watching from
the location that your billing information says you are...

Then why do they claim to be so far superior to radio? All they're
doing is imitating the very thing they claim to hate so much. Let's
see them do something different with this "amazing" new medium beyond
playing Billy Bob's favorite music mix and calling it stupendous.

Ok, lets get this straight. You supervise the programming of the
5-latin music channels that XM carries, and you get "fan mail" but you
don't work for XM?

So you work for free????

No one compensates you for your work?

Are you telling us that XM violates Worker Compensation laws in the
District of Columbia, where they are located? Its illegal to have
people work and not compensate them in the District of Columbia!

How can you do work for XM but not WORK for XM?

Did Rickets in the Marketing Department put you up to this?

Satellite radio will do fine. Especially when the sat/radios roll off the assembly lines pre installed in the new cars and the home model and boom boxes hit the streets. If your getting worldcom, then your not even in the U.S.A.

By that logic, we could call netcasting, webcasting, or Internet broadcasting (all perfectly descriptive and valid terms for the same thing) "dog kennels" or "mattresses". It certainly DOES matter what you call something.

> This whole conversation is one of those no-win topics... No one is ever going

If we cannot even arrive at a common definition of terms, what possible hope is there that the underlying issues can be discussed in any meaningful way?

I'd love to. Got three radios (a Sony portable, a Yaesu communications radio, and a Radio Shack scanner radio. Between the three of them, there isn't a frequency I cannot pick up from 100KHz to 1.2 GHz. Where do I tune to hear you?

Well, since my collection of salsa is probably one of the larger ones in existence, the fact that I don't know or recognize the songs probably means that no one else does either. I could nott even identify the artists on many songs, and when I could, they were often deep album cuts off material that had had no commerical impact. To me, that spells "stiff" and means they are playing stuff no mainstream listener would have any interest in.

To each their own, however.

I am interested in more mainstream stuff. As are 99% of listeners within a genre. Playing different for the sake of different defeats the idea of having a satellite channel. It should be both different (longer lists, more variety of oldies, more new artists) and good (lots of familiar songs and artists.

I have talked with tens of thousands of listeners over the years. None of them ever said they wanted a station that played lots of music they had never heard before (probably because all 11 of these listeners were busy reading posts on this ng).

This is actually surprising given certain technical advantages inherent in netcasting. Radio stations have no way of instantly determining how many people are tuned in, or even having the count accurate. Broadcast radio is also a one-way medium; netcasting enjoys a native two-way infrastructure...making an interactive experience far more practical.

Instead of operations exploiting these and other advantages, what we get from them is regurgitation of broadcast radio material and a lot of hype.

The fact is that netcasting and radio broadcasting are two very different venues. Rather than making the distinction fuzzy, netcasters should be celebrating the distinction and offering unique services that have been unknown to the public so far.

But I guess it is much easier just to "play radio" and fade into the me-too world homogenized blandness.

1. It's radio, not TV.
2. Never say never. Who would have ever thought that individual stations,
negotiating with individual MLB teams, would be forbidden from streaming, in
favor of a deal in which MLB makes all games available, from any computer
anywhere, for a fee.
3. If it means added revenues, and the radio networks and teams/leagues
share in the revenue, what would stop them? I mean, if the same broadcast is
available on AM, FM and XM, what's the downside to the broadcasters and
leagues?

It'll happen.

(BTW, the only reason NFL Season Ticket is the way it is, is to protect the
blackout restrictions and the ticket sales at the gate. MLB has few if any
of the same restrictions on TV, and they've never had them on radio. Here in
Baltimore, either WBAL or WFBR has always carried all 162 games.)

1624. WARM 590 AM

I live/work in the Wilkes-Barre PA area and enjoy talk radio. There are only 2 talk stations WARM & (WILK + other properties) WARM changed to 50's music leaving only WILK plus WABC NYC which has a moderate signal here. I often listen to Shaun Hannity on WABC and the other day was in a noisy area and started flipping around and found the same feed on WARM.

It is good to hear competition again! But it seems WARM is treated like an orphan property. I did not see any ads concerning the change back to talk radio. I went to their web site to see the schedule and found it was still do wop radio. I think their is room for competition in this market and wonder why the owners (Citadel?) have no interest in promoting the property?

Nearly all have broader playlists, deeper cuts and the hitbased formats play
a lot more new music. Rotations are generally slower.

Maybe they'll bring back Imus. Even today ``Remember Scranton'' is a
watchword on the show; I heard it last Thursday in fact, in connection
with Imus's nephew's wedding which required Imus's presence over the
weekend.

The expanded band AMs are working just as well as any other lower-power
group of AM stations. There are only about a hundred X-band stations, many
in some very small markets. A small market X-band does no better nor no
worse than a comparable facility in the top end of the "old" AM dial.

Who cares about the technology used to deliver the audio? The difference will be the commercial free (paid for) wall to wall music programming which will cover a wider variety of formats and selections within each musical niche.

George,

I live in the NEPA area, also. Did you see the special on WARM that channel 44 broadcast last week with the dj's from their golden days as a music station in the 1950's and '60's?

on the FM band, Z-Rock at 95.7 is now "Z-Talk" with a bunch of syndicated shows such as Bob and Tom, Opie and Anthony, etc.

I'd enjoy hearing from another radio fan here in NEPA--- drop me an email if you get a chance.

Bob

If there had been something about XM that I did not like, I would have mentioned it.

OK, if you want my "dislikes" from a different perspective, I don't like any of the hard rock channels, because I hate English rock. In fact, I dislike most American music in English. So I don't listen to those channels. However, a number of the news and spoken word channels are quite appealing, and I like the classical, jazz and world beat channels.

The quality is more than acceptable to me in my car. The delay switching between stations is a bit aggravating, but necessary to buffer. I could do without some of the excessive production and identifiers, but that is hardly a big deal. The only musical options I would like that are missing are so nice that they would not have any strong appeal in the US, so that is really another non-issue. The price is not onerous for the choices and the limited commercial nature of the product.

I find far more problems with my Palm Pilot.

And I love the profit I made on the stock a few months back.

If you want to run the risk of operating an illegal station, go for it. Personally, I think someone in your situation at your age would be much better served by starting up an Internet streaming-audio station. It's not illegal (at least not yet), it's outside of the jurisdiction of the FCC, you get worldwide range and many more listeners. To me, the choice is obvious, but if you just wanna stick it to The Man, it's your choice.

Cable is 10% TV off air which is 86% canned network and sydicated feeds and a few local newscasts. Radio used to be as local as you can get it before program groups ran them over. A PD and 6 or so DJ's made up their own minds (after the A&R dude said, "Baby, ya gotta play this! It's BOSS)! Today, radio stations are in cahoots with the promoter and the ticket sellers as well as the record companies (sometimes the station and the first two are One In The Same as in Clear Channel etc) and it's all about units--tickets, gross revenues and CD's sold. It's as if the music business was not satisfied with selling albums and decided to <quietly> take over everything else.

Where does that leave us? They invent hit music that has NOTHING to do with requests or even a mass market. Do you know what happpened to the telephone request line at KRAP/KRUD? They changed all their numbers when they were bought by MEGACOMP. Come up with contests for 1000 stations that nobody wins in your area. $1,000,000? OOOO-KAY!

10kc is tenkc@fmtc.com in the heart of Boise's shadow. He wishes he could make money doing rebuttals like a group station selling 'NSYNC tickets!

I have been quoted $1145 for a new replacement blower for our
transmitter, less expensive than a rebuild.

This seems somewhat high to me.

Does anyone have an old parts TX with a good one in that they could let
go at a less extortionate price or know of someone who has?

Many thanks.

And you believe that public television in "commercial free" too? "Made possible by a grant from Harry's Hat Hut" is a limited commercial allowed by the FCC because they wouldn't get money if the grantor wasn't pushed by the station! And, man, they Struggle! In Britain, the sets are taxed to fund the BBC by way of a license. You play, you pay. Only way it works for them. So, if you also consider the flight to paid computer sites and services, can you afford to be so Naive as to believe satellite radio will remain pristine too? Especially since Clear Channel doesn't believe in NOT making money? WAIT...maybe they DO believe in not making money...this is certainly confusing, huh?

I just know that I have no interest in satellite radio. I'm an avid DXer. My uncle sat me down in his car when I was young and told me if I turn the radio here, I could hear San Fransisco (no way)! Then LA, Seattle, Toronto, Calgary. Then he showed me his ham shack. AM is almost all I listen to (but for when content or reception get poor). AM stereo brought me back from the FM abyss. I worked at an AM/FM station once. I got to play CD's on the FM but I so wanted to "UNCAN" the 1kw automat I shut down at night! Nobody will pay for "radio" when they have a gillion CD's and a veritable jukebox in the trunk. And the notion that truck drivers will buy one of these things when they still fear for their own livelyhood? Hah! There is a 50,000 watt AM station with a trucker show covering almost every portion of North America. And trucks have CD players too. CD's and audiobooks are available in nearly every truckstop in America.

And if I seem out of whack, I'm sorry. Second day on the list, first day writing and learning.

More than eager to talk. And listen.

WHO THE HELL WANTS TO LISTEN TO THE NEWS ON AM?

I have almost all wideband stuff, 7000-10000Hz whether original or modified
for C-Quam reception (AM stereo). It sounds as good as a mono TV in mono and
awesome in stereo. I have stereo jazz and student dj's and mono statndards
and classic country. BTW, news sounds even better on a station like KCBS or
KNX that broadcasts in stereo! C-Quam is 20 years old and you all write it
off although you NEVER gave it a good chance! I will never go back to a
cheap thing like a CCRadio ever again!

Not to argue with your main point, but I spent most of the time listening to
WMMR in my Frontier Hall dorm room at the U of M with the radio unplugged. The
carrier current signal was strong enough to be listenable within the dorm rooms
without directly plugging the radio in. The "unplugged" listening helped to
reduce that nasty 60Hz hum.

Did you make a "profit" on your Palm Pilot stock or are you trying to tell us you made a "profit" on a stock that just posted a $284.4-million loss with no revenues? If XM made a "profit" on their stock, I'm sure the SEC would like to know how! As would we all.

In the financial world in the United States, one has to make a "profit" by making more money, than they are losing. So far, XM has lost more than they will ever be able to recover via subscriber sales. You don't make a "profit" until you've recovered your losses, covered your overhead, and have more money coming in, than going out. Maybe you can razzle-dazzle us with your resume some more, to explain how you made a "profit" on XM stock!

It was your Palm Pilot stock right?

The latest XM PR Hype says that their signal is "almost CD quality", so the sound isn't anything to write home to Momma about. I've listened to XM for a solid week and didn't find anything I couldn't live without. I suppose if you are from the Amazon and have a taste for Cuban Lewinski Cigar Salsa Rap Reggae Heavy Metal Punk Polka, XM is a must have. However, if you enjoy American style programming, including talk, XM isn't going to either provide anything you can't get on the local stations, be they talk or music. In spite of the griping here about "local programming", XM isn't any better. Lee Abrams, who's programming has been either used on copied on most US stations for the past 20-years is doing XM, so there isn't anything new or different. An NPR guy is doint the Classical stuff, so again, NOTHING NEW!

If you drive from Seattle to Miami and want to listen to the same stuff the whole way, then XM is probably for you. However if you commute to work everyday like most of us, and want the time, temp and traffic report, XM offers no better quality sound, and can't provide you with essential info for your commute.

For the 4 people in the United States that can't live without, Cuban Lewinski Cigar Salsa Rap Reggae Heavy Metal Punk Polka, by all means, run down to the Circuit City, lay out $200-$500 for a receiver, another $60-$120 for an antenna, and then wait while they charge you yet another $100 for installation and wait on hold for their 800 "sign-me-up-to-pay-$10-a-month" operators to process your order. See how much more convenient that is than just turning on your local station? What are we non-XM people thinking?

I made a profit on XM stock. Me, personally. Yo. Moi. Usually, profits are made by buying low and selling high, which is what I did. And what most investors try to do.
>
> In the financial world in the United States, one has to make a
> "profit" by making more money, than they are losing. So far, XM has

Back to that again... they don't have to "recover" oses because the costs of startup were paid form equity capital, not debt.

> You don't make a "profit" until you've recovered your losses, covered
> your overhead, and have more money coming in, than going out. Maybe
> you can razzle-dazzle us with your resume some more, to explain how
> you made a "profit" on XM stock!

For tax purposes, a loss may be carried over form one year to another. For financial statement purposes, data is stated for each reporting period. If XM lost in 2001, and paid for those loses out of equity financing capital, there is no operating consequence in 2002; they do not have to "pay off" the loss as there is no debt to repay.

When we see Ford lose $5.4 billion in 2001 and AOL/TIme Warner lose $50 billion, give or take a few, $275 million is doewnright reasonable.

And... how many times must you be asked to take into account that XM does not plan to make money until 2005? They are right on the business plan, just as is common for most start-ups.
>
> It was your Palm Pilot stock right?

It may be true that XM is not trying to service a note, but remember that equity capital came from somewhere, namely their investors. While there is generally no legal obligation to repay your investors, I assure you those people would like to recoup their investments and make some profit. When you invest in a start up, nobody is guaranteed the business will succeed, but it is always the investor's expectation that it will.

If a company is formed with no intent of ever recouping it's losses, it's sometimes called fraud. I think it is a little irresponsible to say that there is no need for them (or any business) to recoup the start up expenses. Or is this the audio version of Enron?

There is no free lunch.

1659. A non-XM subject: Clear Channel and small markets

Newsgroup: rec.radio.broadcasting

Ok, this post is not about XM... (although I'm happy to see the traffic in the group over the past week... it has spiked!)

We all know about the big guys' reputations for cookie-cutter radio, but I am very pleased about the status of two radio stations in northeast Ohio that were recently bought by CC. One is WKDD in AKron, the other is WZOO in Ashtabula. I'm pretty amazed that they have basically left the stations untouched. Not quite as amazed about WKDD since WKDD has been at or near the top of the market in Akron for years, but definitely amazed about WZOO. Actually, I'm surprised they went after either station, but I guess that's what you do when you already *have* properties in all of the large markets.

Anyone else have similar observations about CC's performance in other small cities?

Investors want to preserve captital and hopefully achieve appreciation or
dividends. The only way to recoup the investment is to sell it.

It is not necessary for a company to be profitable to achieve the former.

> If a company is formed with no intent of ever recouping it's losses, it's

Why would you think that? Enron was a scam; XM and Sirius are just new
ideas. Not all ideas work equally. That is why investment advisors say XM is
risky and a speculation and government bonds are less of a risk.

1662. Old time Radio Shows and Original Commercials

If you like hearing old time radio shows from the 30's -
early 50's that includes the original ads, try this station:

http://www.classicstars.net/csr/

The Shadow
X-Minus-One
Chandu The Magician
Suspense
The Lone Ranger
Abbott & Costello
Superman
Amos n Andy
Lux Radio Theater
Burns & Allen
Green Hornet

To mention just a few

I am not associated with this station or 365 in any way, but

do like old radio shows and the commercials from the time
imbedded in the shows are unbelievable

Perhaps my business ethics are just too conservative to get excited about such ventures. I also don't approve of the way huge conglomerates take over their rivals. It seems like the same formula. Being an old fart, I've always prided myself by actually working to earn a good living, not just "doing deals" using other people's money.

It's obvious my old fashioned attitude isn't in tune with today's business environment, especially as it has manifested itself in the broadcasting industry. Stay tuned. You'll see the same pattern happen in the telecommunications industry in the next few years.

I'm no doomsdayer, but when some of these things come crashing down, I think a few old fashioned business values will come back into vogue.

Even the great RCA fell.

That's about all AM is good for. News and talk radio. Certainly not
music! Too bad most talk has migrated to FM where the bandwidth is
wasted.

Nope. Compression artifacts will drive people away. CDs sound like
CDs. "Almost CD quality" just don't make it. Today's cars are really
quiet by comparison to older ones; people *will* notice. It doesn't
take a youthful ear to hear the difference between a CD and "near CD
quality." Your engineer hero John Higdon has already stated that fact.
Or doesn't he matter since he's being honest about it? You've already
stated that you don't find anything NOT to like about XM, and that you
are directly involved with the system. Can we believe you? I doubt it.

Luddite? Doubtful. Realistic perhaps, but not luddite.

1665. DXing.info is open!

Newsgroup: rec.radio.broadcasting
Date: 2002-05-17 00:44:30 UTC
From: Mika Makelainen <mika@makelainen.com>
Message-ID: <ac1jpepvf1@xuxa.iecc.com>
Source record: 10877

Comprehensive website on DXing opened

DXing.info is the new reliable information source for radio hobbyists worldwide. Whether you are looking for the latest news on world radio, audio samples, logs, background articles, DXpedition reports or propagation information, you'll find it all on DXing.info. And should you need something that is not on DXing.info, there are links to guide you further to the best DX resources on the Internet.

The content is aimed mainly at DXers interested in mediumwave and shortwave broadcasting stations, but also FM listeners, other radio hobbyists and broadcasting professionals should find useful material. The reference material - such as a glossary of DX terms with hyperlinks - is useful to the beginner and the veteran hobbyist alike.

The site is based on "Freeze! DXing Arctic Style", but has been redesigned from scratch. "Freeze! DXing Arctic Style" has become history as a brand, but its content has found a new home at DXing.info. The new structure and design mean easier navigation, faster download and improved accessibility for users with different software. And of course the URL is much easier to remember.

DXing.info promotes cooperation and partnership among players in international radio. At http://www.dxing.info/community/ you can join the DXing.info Community to share the latest DX information and exchange opinions on DXing and broadcasting in real time. Thanks to sophisticated software, DXing.info Community is the ideal way to follow what's happening in the world of radio and DXing - without clogging your email account.

To better serve your DXing needs, DXing.info relies on the contributions of its users. Check out the site, take a moment to think what is missing, and how you, your site or your organization would like to contribute, to improve DXing.info further.

To get started, just click on http://www.dxing.info/ - you can also check out http://www.dxing.info/about/ for more information, and of course there's the FAQ at http://www.dxing.info/about/help.dx - just a word of warning about the search function; the site is so new that its pages have not yet been indexed by Google, so it will take some time before the search will operate.

And, if you have a radio or DX-related website, you may want to serve your visitors by linking to DXing.info. You can find out more about linking on http://www.dxing.info/promos/banners.dx

DXing.info is edited by Mika M�kel�inen, a Finnish broadcast journalist and DXer for over 22 years, with contributing DXers from several countries.

See you soon on DXing.info!

> too? Especially since Clear Channel doesn't believe in NOT making money?

Satellite audio services certainly will. Music Choice, DMX, Muzak.
Commercial-free music services are a necessity in a modern workplace; home
listeners enjoy these for less because they make their nut elsewhere.
Music
Choice on cable here in Oneonta just added 5 more channels, total of 45.
Folklorica, Boleros, International Pop and two Brazilian formats. A clear
response to satellite radio; competition brings out the best. But if you
program radio with full consideration of the excellent alternatives
listeners
now have, it'll do just fine.

C'mon guys, the kid asked for help. He asked about LPFM. Surely we can do better than remarks like that when they're not justified.

While he said he had read the pirate group, he was asking about LPFM in Airwaves, which is not a pirate group. And just because one reads that other group should not be cause to label them; he specifically noted he hadn't fired anything up.

While the latter parts of the responses were insightful, the opener of G.T.'s was, apparently, typical 'tude from those in the business who all so often get all high and mighty about anyone who might think outside conventional broadcasting, like LPFM, which, everyone should know by now, is not illegal (that is to say it's not exclusive with unlicensed broadcasting). An attitude that's aloof and somewhat contradicting when a number of those in the biz have fired up their own (*gasp*) unlicensed xmtrs before - and not all in their blissful youth!

Dave (the original poster): unless the commission opens new filing windows for any remaining LP-100s (100 watt LPFMs) AND you are part of a non-profit community group of some type who wants to apply for one, the opportunity to apply for LP-100s has passed. However, once all applications for the LP-100s have been processed, a new round of applications is expected to open for LP-10s (10 watt stations). But that's not going to happen anytime soon at the rate the LP-100 apps are being processed. Perhaps there is an LPFM coming to your area that you can become involved with.

Even though those in the biz managed to get a lot of the effectiveness removed from LPFM, if only for the time being -- they still can't get over it.

My advice - LPFM is here, NABsters. GET OVER IT!

What planet are you on? "Most Talk has migrated to FM????" Where on earth did you come up with that? Very little talk is on FM. My business is network Talk Radio and all the networks I've worked for and competed with still have the AM stations as the vast majority of stations on their affiliate lists.

I have nearly every networks affiliate list. AM is king for Talk Radio. FM talk tends to be of the "where's the last place I passed gas" variety. AM talk tends to deal with a little more substance. It's all just entertainment, so it really doesn't matter.

It's going to be a long time before FM talk even approaches AM in number of stations.

Is there a radio station that knows how to build a website?

Most of them I visit take a half hour to download; Clear Channel
sites take a half hour to download and then crash the browser
(a fairly recent Netscape).

This I gather strikes them as good work, because it's been getting
worse not better.

Absolutely nothing. To succeed you need to see yourself as a content
provider. If your content pleases listeners it doesn't matter how it's
delivered.

I deliver my programming via AM, FM, XM, Sirius, the Internet,. TVRO
and shortwave.

Only the number of listeners changes with the delivery system.

What about the Dutch station Radio Ten Gold on 675KHz?

It has plenty of listeners here in the UK.

Radio Veronica was also very popular here even though we cannot
understand the Flemish language.

Well, quite frankly, Clear Channel outlets' web sites are full of all sorts of crap. Yes, pre-version-6 versions of Netscape are not as HTML compliant as pre-v6 versions of IE. However, that does not excuse doing a small amount of extra work to make the sites cross-browser compatible. I'm a web developer, and I consider myself to be somewhat competent... ;) and I don't have problems doing it; neither should any other competent web developer.

Unfortunately Microsoft stuff is full of buffer overrun bugs so is a hacker magnet. The security incompetence of Microsoft is astounding, not only against recent bugs but against bugs known and taught as examples in the 80s. Which is to say you have to be crazy to use it.

They are now mission-wise ``security conscious,'' which means that they still haven't got a clue but are aware people have noticed that their stuff is junk.

You had better enjoy while you can, Radio 10 will be moved from AM after
Sept. 1st and continue only on FM.
Simulcasting on AM and FM wil be prohibited in this country.

>
> It has plenty of listeners here in the UK.
>
> Radio Veronica was also very popular here even though we cannot
> understand the Flemish language.

oops; we try to speak Dutch in this country.
If you want to study the difference between Dutch and Flemish you can
compare between 675, 1008, 747, 1395 and 1296 (from the UK!!) that are
all Dutch, and 540 and 927 that are in Flemish.
Flemish is spoken in the Northern part of Belgium; in the south they
speak French (621 kHz).

Just goto live365 and goto the "talk" section.......there your will find
about 10-stations which play OTR stuff. One is a continous loop of all 121?
shows X-Minus One. Thanks to Dave, and John and Me (re-up from the other
two) for uploading them to the usenet two/three years ago for all to get.

Trust me: There's a BIG difference between what the military put on
AFN-Europe and what you'd get on a typical "American radio station";
you wouldn't like it. And I presume you mean "US" rather than
"American"? America is two complete continents!

I've had no problems with any of the Clear Channel web sites I routinely visit (WLW, WSAI, KZPS, WOAI and others). I use Mozilla 1.0-RC1 under Linux. By the way, recently released Opera version 6.0 (20020510) also works well. Older versions of Netscape (in the 4.7X series) are problematical. I simply haven't found that the absence of MSIE nor of Windows on my computer has been an impediment, particularly with broadcast sites, Clear Channel or otherwise.

LPFM is not "here" it's castrated.

"Dave" just get a 1-watt NRG or go with an 1-watt AM and find an open frequency and use a filter. At 1-watt you will most likely not be bothered with the FCC. Range will be around 1-mile.

Someone mention something about a "Community" radio staton. Not sure what decade he is living in, but since HelliCom96 there ain't no "community" stations.....unless he was refering to "pirate" stations.....which are the only "community" stations now. And the many remote-satilite relay low-power relay stations are not "community" stations either.

So good luck and hope you serve your community well.....unlike the dreck of Corp radio.

I think economists call it "diseconomies of scale"...

....in other words, for the money to be gained from Netscape users viewing the site, it's not actually worth spending extra cash to design the site to be Netscape compatible.

It's like Clear Channel's live streaming gizmo - it doesn't work on Macs because so few people have them it's not worth the fart about to make it work.

Not having cable or ADSL is no excuse.

Move to America if you want to hump their transmitters so much.

Except the whole idea behind HTTP and browsers in the first place
was platform-independent presentation of data!

Anyway, someone asked about a good website. The WDRV website for
"The Drive" in Chicago seems to be a nice match with the station's
format. It could be somewhat more informative about the station
itself, though. <URL: http://www.wdrv.com/>.

in article ac5vpdkvt1@xuxa.iecc.com, rdcole@yahoo.com wrote:

> Give them time, the Coporate Wonks from San Antonio will be in soon to
> screw up things. Install an automation system, Fire the staff and run
> the radio station remotley.

Clear Channel may have bit off more than it can chew with small market stations. It is having a heluva time getting engineering services in the small markets because it simply isn't willing to pay for it.

For instance, CC owns many stations in California's High Desert area. I have been to many of them and even helped build a few of them. These are little toilets in and around Victorville, Barstow, and stretch to Palmdale and Lancaster in the Antelope valley. CC has been trying for quite a while to find someone to take care of all these stations...which are spread out hither and yon, hours away from each other via auto.

The area experiences snow and dust storms. None of the sites have backup transmitters. One of them even has no commercial power, with a generator that runs 24/7. Some have no phones and are out of range of any wireless phone service. One of the sites has no access unless one phones AT&T (the owner of the site) and makes arrangements to meet someone there. The region has to parts outlets. Everything must come in via Federal Express...which one picks up in Riverside, eighty miles away.

Since I'm familiar with the area, and I'm fed up with the Bay Area rat race, I thought it might be cool to check out the job opening. After all, my business partner owns a house (currently vacant) located midway between Barstow and Victorville and I could move right in.

My discrete inquiry revealed that they want to pay no more than $60K/yr, provide no company vehicle, and hire no assistant help. No thanks. Any vehicle would be consumed in three years from the elements and from wear and tear, and the sheer vastness of the area would mean that the unlucky candidate would be on the road almost constantly...with people probably wondering why he wasn't in two or more places at once.

When I balked at the dough, I got "these stations [there are over a dozen] don't produce enough revenue to justify any more pay than that." Well, that's not my problem. If Clear Channel cannot afford to operate those stations by paying a fair wage and providing necessary equipment, then maybe they shouldn't have them.

Clear Channel will probably do what has been tried in times past: hire some green kid who is impressed by the puny pay. This usually lasts until one or more of the following occurs: his vehicle begins to require more repair and maintenance than he can afford; has multiple stations off the air; finds

that he is in over his head with regard to maintenance and adjustments (particularly with the AMs); discovers that he cannot get parts locally; and/or just burns out generally working his buns off in an isolated area.

Clear Channel may be cruising for a bruising in some of its markets.

1699. Re: What happened to Z-95.7 in San Francisco?

Newsgroup: rec.radio.broadcasting
Date: 2002-05-18 19:47:43 UTC
From: markrobt@hotmail.com
Message-ID: <ac6b4vatq1@xuxa.iecc.com>
Source record: 10958

Adora <adoramango@yahoo.com> had written:
| I was used to listening to Gene and Julie in the mornings on 95.7 KISS
| FM (San Francisco),

The station's slogan was "Z-95.7". The "Kiss" slogan is used by
KISQ/98.1, a Clear Channel station (R&B-ish). KZQZ is owned by
Bonneville.

| What in the world is "The Drive"?

Classic-rock format with a "lite" rock presentation, first
introduced by Bonneville in Chicago (WDRV/97.1) a year ago
and proving successful at getting 25-54 male listeners. It may
have a tougher time in San Francisco: KFOG/104.5 occupies much
the same territory with the addition of some newer music.

The presentation reminds me of the old KRVK/98.9 in Kansas City in
the early 1990's -- "The River/98.9 FM/Mellow, easy rock/With less
talk" -- personalities deep, deep in the background, playing
classic-rock standards but none that rocked out too much. The
format was called, at the time, "male adult contemporary". The
playlist is somewhat different, but that whisper-hush-hush
presentation and the intent of the format seem largely the same.

KRVK liked to play entire albums on holiday weekends. I wonder if
"The Drive" will do the same.

The other Bay Area format change in the last two weeks was at 92.7,
formerly rebroadcasting San Jose's KSJO/92.3, becoming
KPTI, a dance-music format. The Radio-Info message-board crowd is
wetting all over themselves for this one, which is amusing to
watch, but it would be nice if KPTI could play more than
six tunes in any given day.

Radio station web sites generally do the exact things that are on the 'death
list' of web site gurus:
Their pages take too long to load (most people still have 56 dial-ups)
The have a "splash page' (one with fancy graphics/audio that takes forever
to load then says 'chick to enter')
They have sites with frames that are complicated to navigate.

The rule of thumb is, no matter how excited the surfers about our site',
they will probably click-away if it takes more than 25 seconds to get to the
meat.

Well, were I in a judgemental postion, I would call that a flame. ;-}

In any case, I do not work for XM. I do not receive money from XM. I don't
even think I have talked to anyone from XM all this year! XM outsources many
of its channels, and the 5 Spanish langauge music channels are provided to
XM by an outside company. I work for that company.

The radios in the Mercedes M class are built by Bose. Bose sells the radios
to Mercedes, who sticks them in the vehicles. A bose employeed does not work
for Mercedes, however. And I don't work for XM. Got it?

Nope. My job does not depend on this. It's a sideline, done mostly for fun.
I asked to do it without extra compensation.

It does not matter what I like personally. The advantage of XM to the people
who don't like terrestrial radio is the broader music lists, the greater
variety of channels, etc. Terrestrial radio lovers often behave in exactly
the opposite manner; they prefer shorter lists of very familiar songs.

XM itself says that their target consists of the disenfranchised and the
discontented. So we have regular radio for the majority taste, and XM for
the more eclectic, specific of demanding. Two products, two taste groups,
two markets.

Actually, no. There is a $200 million issue of the second satellite that was
dropped in shipping, and there are insurance adjusters working on this. I
don't believe XM owes Boeing anything long-term for the launches.

One service attracts listeners who want radio free of charge. The
other attracts *customers* who want radio worth paying for. David programs
to both business models based on market research rather than personal
tastes; he can indeed have it both ways.

I think we are being asked to recall Jesus expelling the money lenders from the Temple. That was a while back, and it had more to do with the location than the occupation.

Now Now Now David... I have held you and your knowledge of radio in high esteem for a long time. I value your knowledge as much as the knowledge of other experts in radio, such as Rich Wood, and Peter (last name unknown, the AOL'er AM engineer expert on antenna arrays) and others, but you are losing stock quickly in this thread denying your connections to XM. You are hung up on semantics, not the truth, which is that you are heavily tied to XM as a programmer of 5 of their channels. Just because the CFO of XM doesn't sign your paycheck, doesn't remove you from XM to the point of being objective, which is what this is all about about. Please, concede your connections and inability to be totally objective about XM and restore my faith in your tremendous knowledge of our business. You attempts at trying to appear to remain objective are not worth sacrificing what credibility you have on this newsgroup.

Clearly you're new to this group. My guess is that you're a groupie. I won't go into detail because you can find my credentials in the archives of the group. Let's just say that May 30th will mark my 43rd year in both radio and TV.

At the moment, I'm the Senior Vice President of a large Talk Radio Network. With a recent aquilinity we now have more than 1400 non-duplicated affiliates. We serve AM, FM, XM, Sirius, the Internet and shortwave with our shows.

Rich

>> Clear Channel will probably do what has been tried in times past: hire some green kid who is impressed by the puny pay. This usually lasts until one or more of the following occurs: his vehicle begins to require more repair and maintenance than he can afford; has multiple stations off the air; finds that he is in over his head with regard to maintenance and adjustments (particularly with the AMs); discovers that he cannot get parts locally; and/or just burns out generally working his buns off in an isolated area.

Talk about radio eating its young...<

Discussions among broadcast engineers these days often center on where the next generation is coming from. When technically trained people can make $50,000 a year straight out of college doing computer work, with no need to carry a pager and a cell phone, no need to be on call 24/7, and no cheap bosses who will nickel-and-dime them to death, guess where they'll go. Hint: It won't be the broadcasting business.

Radio and television exist because of technology, yet this business keeps finding new and better ways to shun the very people who make it work. How smart is that?

>> The radios in the Mercedes M class are built by Bose. Bose sells the radios to Mercedes, who sticks them in the vehicles. <<

Correction: Most, if not all, of the automotive radios with the "Bose" name on them are not actually made by Bose. Bose just gives their "certification" to radios and amplifiers made by other companies, such as Matsushita (Panasonic). Same thing with Chrysler radios that have the "Infinity" name on them.

Mercedes-Benz radios have traditionally been made by Becker. However, since the DaimlerChrysler merger, they may be using a different supplier, which would be a shame because the Becker/Mercedes radios were of very high quality, often featuring AM STEREO, of course.

Which I have always stated openly. However, I do not work for XM. I do not
get a W2 or 1099 form them, and would were I employed by them.

> Just because the CFO of XM

Disagree. I jumped into the XM project for "free" jsut because I felt there
was a unique potential and because I realized there are several Hispanic
targeted formats not being done in the US that have unitque attractiveness
to milllions of unserved Hispanics.

The reason I'm enthusiastic about XM is the reason why I am doing the
programming for no additional compensation.

> You attempts at trying
> to appear to remain objective are not worth sacrificing what credibility
you
> have on this newsgroup.

I don't think I have been positioning myself incorrectly in the programming aspects. I do speak for what is obviously the "other side" here, and someone needs to counter the "XM is in debt and dying" lies. I appreciate you vote of confidence, and in this matter I trust you will excuse any partiality but someone needs to show the simple fact that XM will be here for years and years and losses are an expected part of the business plan.

OTOH, if it does not work, I loose nothing. If it does, I make nothing.

1730. "Radio Crazy" re: Part ownership of Oklahoma AM for sale.

Newsgroup: rec.radio.broadcasting

For sale:

Partial ownership (Joint venture) of fulltime AM radio
station near Oklahoma City, OK.

$10,000 min. per investor. $10,000 gets you at least
10 percent of the corporation and the station. All
investors would be on the board with full voting
rights if desired.

This is the only station in that community. On the air
over 40 years.

Sale includes tower, ground system and transmitter but
NO studio equipment.

Total consideration is $85,000 with $20,000 down.

NO real estate is included. This station has a
potential listening audience daytime of at least
100,000 people and that is a conservative estimate!

If you are a "AM basher" PLEASE don't waste my time or
yours.

Tel: (478)741-1710 anytime. (Macon, GA)

73,

Meyer Gottesman, W6GIV.

Technically, stock profits come form the buyer if you sell higher than you bought.

Small investors don't buy stock form the company they invest in; they buy it from another investor via a broker. Which is what I did.

If I go buy some GM stock, I have not engaged in an employment deal with GM due to it.

Leaving no nit unpicked, you fail to realize that most Bose products are not made by Bose anyway. They are made by some subcontractor in Asia, usually.

The point was that a supplier is interested in the success of a buyer, but not employed or part of the buyer.

Things have changed so much from a technological standpoint that the days of the true chief engineer is as much a thing of the past as the turntable. Most full time CE's today are more like computer network administrators rather than techno junkies with a soldering iron.
Today's broadcast components are plug-in modules. Solid state transmitters have very few on-site replaceable parts. No more final tubes to replace. No more tuning modules.
We have become board swappers. Arrakis, Wheatstone and Auditronics consoles are all modular... if a module/pot/cue amp/telephone interface fails you just swap it out (while the equipment remains in service). The solid state transmitter chains (STL, processing and transmitting) are hyper reliable. It usually takes something extraordinary to cause failure (lightning hit etc), at which time you get a contract engineer to come in and try to get back on the air.
The days of realigning the heads on cart machines, tweaking out the phasors and filling out proof-of-performance reports are long gone.
Today's radio station engineers had better have a computer science degree (as Sid mentioned) with a love of radio. As for who will maintain the ancient stations using antiquated equipment, who knows, but I'll bet those who don't keep up technologically, will have a rough time remaining compliant and operational.

>engineering.

Engineering doesn't necessarily imply computer-related stuff, though...
but I will concede your point to you. :)

>>I've seen salaries come down to a much saner (from the POV of a manager)
>level. Many of those $50K entry-level jobs don't exist anymore.<
>
>I still see them advertised in computer magazines. Not that many of them, but
>they're still out there.

Exactly my point. The feeding frenzy is over for good. The number of jobs
has declined.

I do believe that the original point, which is that a professional geek
like me would do much better in other industries than in radio, is quite
valid.

No, they are not. They're made in Asia as you stated in another
message. They only bear the Bose name.

> Bose sells the radios
> to Mercedes, who sticks them in the vehicles. A bose employeed does not work
> for Mercedes, however.

But if Mercedes screws up (or sales of the "M" class are low), those
people at the Asian assembly line are still unemployed. Get it?

> And I don't work for XM. Got it?

I get it: Semantics. You do not need to get a paycheck directly from
XM to "work for" XM. And you DO work for XM. Maybe indirectly, but you
do all the same. That undermines your credibility and makes you a
shill. You can take money from both sides and talk out both sides of
your mouth, while demeaning anyone you don't agree with. I have a

problem with that.

Yes it is. No one seems to realize that opportunity, such as it is, wanes in broadcasting in a weak economy just like it does in the IT sector. At any given moment, return on one's work "investment" is usually better in almost every industry other than broadcasting.

Why would anyone do it in the first place? Historically, the drive to do radio engineering comes from an interest, bordering on obsession, in and with the broadcasting world. One's work shines as a monument as the station does its job of entertaining and informing people. Broadcasting maintenance, particularly radio, creates itself newly every day. Anyone with a few decades of experience under his belt has an endless supply of fascinating tales surrounding the thrills and chills of negotiating mountaintops or smooth-talking one's way through a farmer's field with an FIM-41 in hand.

If comfort, predictability, generous financial compensation, and the ability to leave your job at the office at 5PM is what you seek, you won't find it in broadcasting.

Nope; a whole lot later. The catholic church said so for a long time;
until capitalism took over the world, anyhow. You should know this,
David.

The hacks are, anyway. The engineers I know can still navigate soldering irons. They can build projects to fill custom technical needs at the station. They can still troubleshoot to the component level.

> Today's broadcast components are plug-in modules. Solid state transmitters
> have very few on-site replaceable parts. No more final tubes to replace.
> No more tuning modules.

That isn't all that ever goes wrong with a transmitter. Even the most modern solid-state transmitters can fail and then be repaired on the spot by a competent engineer who understands embedded logic and power supplies. I have made considerable coin breathing life into transmitters after the board-swappers have thrown up their hands. Furthermore, there are still an awful lot of tube-type transmitters out there, even in major markets. Those of us on a first-name basis with MW-50, FM20K, and even current tube-type units such as the HT-25 and HT-30 and HT-35 transmitters have plenty to keep us busy. No one has yet repealed the basic laws of physics.

> We have become board swappers.

Speak for yourself. Some of us actually repair the boards ourselves. In remote, out of the way markets (the topic of this thread), swapping boards across the country (because the stations cannot or will not maintain spares) takes a back seat to repairing it on the spot.

> The solid state

They are reliable...unless they aren't. Obviously, you haven't been blessed with lemon Nautel or some balky TFT that has you running in circles. As a contract engineer, my dance card is quite full. But that begs the question: where are the next generation of contract engineers going to come from? Being a contract engineer can involve pulling rabbits out of hats. The current crop of kids have never seen hats nor rabbits.

> The days of realigning the heads on cart machines, tweaking out the phasors

Huh? Tell me the planet's name so I can get there in a hurry. Are you telling me that I can stop wasting my time reading monitor points and adjusting phasors and ATUs for my pair of diplexed stations? Wow...management will love to hear that, especially in light of some nasty and cranky monitor points that we have been trying to keep in line. I wish I had read your post BEFORE completing that full proof that the commission demanded!

I'm afraid that radio transmission technology isn't quite plug-n-play just yet. Those who think that it is and act accordingly are the ones that will have a tough time remaining compliant and operational.

I meant _all_ their products. In fact, this is the "designer jean" syndrome
at tis "best."

(The reference is to a study by either Forbes or Business Week that showed
that some of the same factoires in Asian porduced everything from $15 retail
generic store brand jeans to $400 designer brand name jeans, using the same
fabrics, threads, machines and labor. Except for style and double stiching,
the products were just aboutthe same.)

Baloney. I work for (and receive paychecks directly from) some of the entities whom I roundly criticize when I think they deserve it. Maybe it is hard to see it in others if you lack it in yourself, but some people's operating principles do not flex depending on who might be paying them this week.

> You can take money from both sides and talk out both sides of

My main concern when I work for someone is the quality of my own work, not toadying to a company line. I also want the checks to be good. Beyond that, my opinions are seldom colored by who is paying me this week. People pay me to do a particular skilled task. Shilling for them costs extra.

I guess your principles differ.

You have a hard time distinguishing between "tongue in cheek" and reality.

Churches of many kinds have preached the doctrine of poverty; they have at
the same time almost always been financed by the wealthy.

The Roman's weren't capitalists? How interesting.

MIght even be true if I got any money for it. However, I don't. I
volunteered as I wanted to be part of the XM project.

Got it? I don't get any money, if XM fails I am still employed and nothing
has changed, However, I do not believe XM will fail. Which is why I
volunteered. See a circle developing here?

Ah, yes...the Song of the Truly Desperate. Dismiss semantics and argue equivalence.

In this case, your position may be in valid. To wit:

> You do not need to get a paycheck directly from
> XM to "work for" XM. And you DO work for XM. Maybe indirectly, but you
> do all the same.

That's only meaningful if the income received from the company supplying programming to XM is a significant portion of his income. And that the success or failure of that programming company is dependent on XM for survival. Neither of which appears to be the case.

David is an independent contractor. That means he draws his income from a variety of sources. And his consultancy appears to be doing quite well, which makes any one client, though valuable, less life threatening than had he only a few clients. Further, this particular company for which he consults, if I'm reading this context correctly, is a program purveyor which itself is an independent contractor of which XM is only a single client. That means, in terms of income need, XM is of only a little more than academic interest. If it goes away, he'll likely continue to provide services to the programming purveyor, which will continue to provide programming to other outlets.

This arrangment provides a certain liberty when it comes to expressing one's self. It's not necessary to hold one's tongue as it would be when working for, CBS...of which I have first hand experience, btw.

Further, XM is continental in scope. Any independent contractor recognizes that if a continental client catches on, that the need for that contractor's services will begin to dry up on the local level, where the bulk of the business landscape is. Meaning that if XM should catch on, it may well drive many of the other outlets for similar programming out of business, harming both the income of the programming company, and David's consultancy. So, serving XM is a double edged sword. And a very sharp focus on reality is the only way to survive. That means maintaining a delicate balance between involvement in XM and serving other clients. Which would be much easier, if he were serving the programming purveyor, as he is, rather than XM itself. Any competent consultant would bear that near top of mind.

As an independent contractor myself, I've also chosen to serve businesses that serve media outlets, so I don't have to serve media directly. That permits me the liberty of speaking my mind, rather than a media company's agenda. It also permits me the liberty of doing my best work, which I'm reasonably sure is the situation with David, as well.

Which makes David less of a shill, and more of a resource. Something that any consultant must be careful to maintain in order to retain his credibility. And while you, and many others, often myself included, may not always absorb his facts and figures as gospel, they are not tainted by the fact that a client on his roster receives a paycheck from XM radio, which may or may not, depending on the depth and breadth of his client list, have a meaningful impact on his bottom line. At least I hope not.

> That undermines your credibility and makes you a
> shill. You can take money from both sides and talk out both sides of
> your mouth, while demeaning anyone you don't agree with. I have a
> problem with that.

So it would seem.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

That is hardly a "vote of confidence", David; in fact, it sounds more like a vote of NO confidence. But I'm sure you'll trot out your routine ESL excuse next. Funny, you seem to have a reasonably good grasp of the language to be able to play the semantics game as well as you do!

The fact is that "W" (the Prez) gets a paycheck signed by the Secretary of the Treasury, although he actually works for the People of the United States. So the signature on your paycheck is pretty meaningless, si?

And I bet that a couple of years down the line if your 5 channels of Spanish programming (and XM itself) are successful, you're in for a boatload of money. If your contract doesn't state that, P.T. Barnum really was correct!

1750. Re: A non-XM subject: Clear Channel and small markets

Newsgroup: rec.radio.broadcasting
Date: 2002-05-22 12:50:59 UTC

>Engineering doesn't necessarily imply computer-related stuff, though... but I will concede your point to you. :)<

It sure does in this business. The line between the two is getting thinner all the time. Especially in markets outside the top 50, if you're a station engineer, you'd better know computers.

1751. No More Classical Radio

Newsgroup: rec.radio.broadcasting
Date: 2002-05-22 15:39:11 UTC
From: TEDELM@aol.com
Message-ID: <acge2vhph1@xuxa.iecc.com>
Source record: 10813

It's simple! "The price of radio stations went through the roof. If you're going to buy a station for $150- to $200 million in a major market, it's pretty difficult to meet the debt load and run it as a classical station." -- Brenda Barnes, Pres/GM of classical KUSC (91.5) which with its satellites covers much of SoCal from Thousand Oaks to Palm Springs, in an article in the LA Times.

The piece is about Saul Levine, owner of KMZT (105.1) who obtained the frequency in 1958. "I did all the work myself. All it took was about $25 in paper work." Levine regularly fields offers to buy his station. One executive calls faithfully every six months. Levine consults with his wife of 30 years and always declines. He says he could bill advertisers $40 million a year if he changed to a mass-appeal format. Last year KMZT (K-Mozart) billed about $4 million.

Levine followed an all-jazz format until KFAC (92.3) was sold and switched from classical to AC. For a while he experimented with 12 hours of jazz and 12 classical, before settling an an all-classical format.

"He's an original, one of a kind," says Deborah Boorda, Director of the LA Philharmonic. Levine has no plans to retire. "I'm a broadcaster; it was a dream I had as a child. I enjoy going to work every day . . . and some things are worth more than money."

(See Around the Dial, by Steve Carney, Los Angeles Times, May 17, 2002, page F20)

I have no bonus, not pay and no indirect compensation form XM or from my employer who provides service to XM. As mentioned, I do this because it amuses me and because, on the chance that it will work, I want to be part of it.

In 5 years or before, I hope to be sitting fulltime in my condo in Palmas del Mar, PR writing novels. I have no real interest of a financial nature in anything that happens to radio after that (I am careful to keep most of my investments outside the area where I work).

Haven't you ever done something for the mere pleasure and satisfaction of having done it? I worked for free my first two years in radio just to get in the door. I gained more in those two years than many of the periods after that when I was well compensated. I am similarly enjoying the XM project. I don't need the money, but want to have the experience, good or bad.

[enough already]

I would like to commend the moderator for the fine job he has done to reduce the noise level of this group.

I believe that there are "alt" groups that are more appropriate for these flame wars. It is quite apparent that some of the participants in this thread behave like the trolls that one sees in other groups (usually unmoderated groups). It appears to me that we have a few posters who must have the last word in the thread and, therefore, will continue to respond to any post made by one of the others.

Tom

[Moderator's Note: Well, if there is nothing new being contributed, it probably *is* a good time to drop the thread. David E and Richard C are the two people still contributing most of the posts at this point, and I would ask them both if they are talking to each other, or at each other. If it's at each other, the thread is over.]

1754. Re: XM flames

With regard to my previous post, I did not intend for it to be a criticism of John's post. There are a few people who have persisted in turning every XM discussion into a "flame war" and they know who they are. A moderated group should be free of this sort of activity.

There is a big XM thread going on alt.radio.digital if Dick and Dave and Russell are interested.

Tom

Could we just make a new newsgroup, say "alt.radio.xm.flame.flame.flame" and
have done?

I just looked at the alt.radio.digital group and the XM thread seems to
have long ago wandered off to digital broadcasting in the UK. Most of
the other posts are also about UK's digital broadcasting. I didn't find
anything actually about XM.

Did I miss something?

No, the whole point of the article is that he won't sell it.

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues,

hip-hop, country, rock, and just about everything else under the sun.
Instead of telling our DJs what to play, we allow them to select their
own recordings from our vast and unique library. It is their
responsibility to mix together many different kinds of music in an
intelligent fashion, and show links between musical genres.

Not really, I was just hoping to redirect the flamers to another group.

BTW, the term "long ago" really doesn't apply, the thread is about 24 hours
old.

Tom

Someone "over there" has just started an XM / Sirius discussion site:
http://pub88.ezboard.com/beverythingdbs
So far the messages are from the maintainer.

Then the "subject" line is certainly misleading, isn't it?

1765. XM review in AutoWeek

Newsgroup: rec.radio.broadcasting
Date: 2002-05-24 12:43:30 UTC
From: "Kevin T." <kevtronics@yahoo.com>
Message-ID: <aclchi$pv9$1@xuxa.iecc.com>
Source record: 10826

A few writers for AutoWeek Magazine did exactly what XM promotes heavily: driving across the whole country and listening to the same 100 channels of programming during the trip.

They had no complaints about reception of the signal or sound quality, but after a while of initial enjoyment they started having various complaints about the programming. They found the music stations to have small playlists and even the "commercial-free" channels were full of constant DJ chatter, liners, and "commercial"-like promos for other XM channels.

AutoWeek also criticised XM's lack of local content, especially the vagueness of its national "Weather Channel", which was of no help when they were driving a convertible car with the top down and unannounced thunderstorms and hailstorms arrived. They also mentioned frequently tuning away from XM to get some "local flavor" from AM and FM stations; they specifically mentioned listening to the Grand Ole Opry on WSM 650 AM in Nashville. (Coincidentally, XM does carry a simulcast of a Nashville FM country music station, but the Opry is only found on WSM.)

I must say this is one of the first reviews from the mass media I've seen that doesn't look like it came straight out of XM's promotional materials. AutoWeek also mentioned Sirius but stated that its national service won't arrive until July 1st.

Ask the person who posted it. He's not changing the format, he's not selling the station, and the whole point of the article, for those who bother to read it, is that he's a rarity in the business.

That review was done maybe 3 months ago; it is hardly new. I suspect you did
not read it because it was posted all over the Xm site as "the biggest
endorsement of XM to date." You might see if it is available on-line and
peruse it again.

1770. New Des Moines Iowa broadcasting history site

Amateur Radio Newsline™ Report 1293 - May 24 2002

This is a special announcement: Attention all listeners. Please be advised that our next newscast, Number 1294, will not be released until Sunday evening June 2nd. This is due to staff travel to an out of town event and will affect only next weeks newscast. ARNewsline newscast number 1295 will return to our normal Friday release on June 7th. Please adjust your release schedule accordingly. Thank you.

Also, once again this weeks Amateur Radio Newsline™ newscast is extremely audio intensive. We believe that it is impossible to really appreciate the words of those quoted without hearing them for yourself. For this reason we suggest that after reading this weeks print edition that you take your web browser to:

http://www.arnewsline.org

Click on the newscast number then download the MP3 audio file. Next sit back and experience a 20 minute "audio picture" of Hamventionr 200 for yourself.

Thank you. End special advisory.

--

Amateur Radio Newsline report number 1293 with a release date of Friday, May 24th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. 2002 turns out to be the year of surprises at Hamvention. This story is first on Amateur Radio Newsline report number 1293 coming your way right now.

(Billboard Cart Here)

**

DAYTON 2002 - A YEAR OF SURPRISE - PART 1

If nothing else, the 2002 Dayton Hamvention was filled with surprises. Surprises like this:

--
"I just flat do not believe that. What are the odd? The top three prizes and people without calls win them? There's a lot of guys walking out of here with their heart down in their shoe soles."
--

That's right. The top three prizes -- three top line ham radio stations and this year they were won by non hams. And before some of you channel

cops start saying that non hams cannot legally win ham gear guess again. The law is on their side. Not only did they win it. They went home with it.

Another surprise? How about business. Business as in what may be a record year for vendors. Why? Because those who came to Hamvention 2002 were armed with cash and ready to buy. Just ask Radio School's Gordon West, WB6NOA:

--
Gordon West WB6NOA: "Well at he booths I was working to show the Gordon West Radio School products the sales were very, very positive. I mean -- people came here to get equipment and to get back on the air.

Many new hams were going on the air for the first time, yet there were allot of older hams who were sort of not on the air allot trading up to new equipment.

Certainly, I think we are about where we were last year for attendance but enthusiasm in acquiring new equipment? Yes! Much more than last year.
--

As to the size of the crowd? There is still no official figure. Also, the weather was a bit unpredictable. Friday was wet. Saturday was first clear then wet. Sunday turned out to be the nicest weather of all. CQ Magazine's Rich Moseson, W2VU, was happy either way:

--
Rich Moseson W2VU: "I just love rain. On Friday it rained and everybody was inside and it was very, very busy and we had a great show.

Saturday it was nice outside and the Flea Market people were happier than they were on Friday. Overall, as always. Good show."
--

Moseson's view was echoed by Chip Margelli of Vertex Standard -- the Yaesu people:

--
Chip Margelli K7JA: "I think Hamvention this year was great. The weather was very cooperative especially on Saturday. This gave us lots of time to talk to customers and describe our products. We think that everybody was in a festive mood and a buying mood and that was good especially with all of the new products we have here. We've had a tremendous time here at Hamvention."
--

In reality, Hamvention 2002 was a buyers market. Dealers kept prices low and lots of major ticket items moved across the sales counters. In fact, it was possible to buy a Yaesu FT-817 for under $500.

As to what was new this year? Listen to what some of the company reps brought with them starting with Vertex Standard's Chip Margelli.

--
Chip Margelli K7JA: We have introduced new products in every major category. We introduced the Mark V Field high-end HF; the FT-897 second generation `man-pack' portable; the VX7R submersible handheld; the FT-8900 `quad-band' 10 meter, 6 meter, 2 meter and 70 Cm mobile radio and the Wires Internet repeater linking system. So we have had a very busy time."
--

Not to be outdone, Kenwood's Leo Famie, KJ6HI, said that those coming to his booth wanted to see a little HT called the F6:

--
Leo Famie, KJ6HI: F6, our new HT. A tri-band hand-held covering 2 meters, 220 and 440. It has a receiver from about 500 Kilohertz to 1300 MHz but blocks out cellular telephones. But the neat thing about this radio is its all mode receive in the band B. AM, FM, USB, LSB and CW."
--

Famie says that dealers sold well over 300 of these new H-T's making the F6 was a bright star for Kenwood at this years Dayton show.

And what about Icom you ask? We asked Ray Novak, KC7JPA, what was hot and what those coming to the Icom booth wanted to see:

--
Ray Novak, KC7JPA: 706 Mark 2 G by far. Also allot of interest in a new digital radio that we have that will give you bandwidth for data equivalent to a T-1 line."
--

One guy who always has something new up his sleeve is MFJ's Martin Jue, K5FLU. This year he gave Amateur Radio Newsline a peak at two new goodies. The one that really caught our eye is a high frequency beacon network receiver that is so pretty that it would be as much at home in your livingroom as in your hamshack. Not only that, it lights up a LED on a map to show you what beacon you are actually hearing: Martin gave us a simple explanation of how it works:

--
Martin Jue, K5FLU: "The beacons are precisely timed...so everything is exactly right. What we did was to duplicate that timing sequence in here. And we make sure that it is always right because we have an atomic clock receiver in here."
--

MFJ also showed its new Morse code interface box. Not only does it decode the C-W signal your receiver is hearing. It also lets you plug in a key, paddle or even a keyboard and send Morse like a pro.

But new gear and great prices were not the only surprises at Hamvention 2002 and we will have more later on in this weeks Amateur Radio Newsline report. (ARNewsline™)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7QVK repeater serving Tucson Arizona.

(5 sec pause here)

**
RESCUE RADIO: HAM RADIO ASSISTS FOLLOWING UK RAIL ACCIDENT

RAYNET -- the United Kingdom's equivalent of ARES and RACES here in the United States was called out on Friday, May 10th. This, following a railroad crash that occurred in the city of Potters Bar less than one mile from the RSGB Headquarters.

The accident took place at about 1 P-M. G4MWO says that Hertfordshire Raynet County Controller, Trevor Groves, G4KUJ, was contacted at home at 2 P.M. and asked to assist with setting up the local Emergency Control Vehicle. Groves had it operational by 4.20 P.M. He then provided technical and administrative support to the relief administration staff who used it until office accommodations were arranged at about 8 P.M. that evening. (GB2RS)

**

RADIO LAW: COMMERCE COMMITTEE VOTES TO DELAY SPECTRUM AUCTION

Back on this side of the Atlantic the House Energy and Commerce Committee approved a measure that would delay the government's June 19th sale of spectrum now used by television broadcasters and sought for wireless services. The panel approved the action on a voice vote May 5th. As previously reported, this legislation was sought by a large segment of both the wireless and broadcast industries. The bill now goes to the House floor for consideration. (Published news reports)

**

SPECTRUM SHARING: MOVE OVER DIRECT TV - YOUR SPECTRUM IS ABOUT
TO BE
SHARED

The 12 GHz downlink spectrum used by Direct TV and Echostar is about to shared by terrestrial services. The CGC Communicator says that thanks to a creative idea and a multi-year lobbying effort by Northpoint, the 12.2 to 12.7 GHz band will soon be used for new video and broadband communications services, such as local television programming and high-speed Internet access. Technically, the new service is called "MVDDS," short for Multichannel Video Distribution and Data Service. (CGC Communicator)

**

RADIO ACCIDENT: FIRE ATOP THE KCBD-TV TOWER

The C-G-C Communicator also reports that KCBD-TV, in Lubbock, Texas, recently installed a new Andrew batwing antenna designed to accommodate both its channel 11 NTSC and channel 9 digital transmissions. After only five days of operation with just N-T-S-C power applied, there was an apparent arc-over and the
aerial was destroyed by fire. The station resumed NTSC operations using an old Alford antenna located on the same tower. Engineers are trying to determine the cause of the failure. (CGC Communicator)

**

GATHERINGS: WEAK SIGNAL BREAKFAST IN NORCAL

The Western States Weak Signal Society and Sidewinders on Two will jointly host a the semi annual "Brunch, Grip and Grin" in Northern California. The Date is Saturday June 1st. The location is Bakers Square in West Sacramento California. As usual, there will be door prizes and a good raffle of a radio. It all starts at 9:30 a-m, Pacific Savings Time. For more information contact W6OMF by e-mail to w6omf@cwnet.com. (VHF Reflector, WSWSS)

**

DAYTON 2002 - A YEAR OF SURPRISE - PART 2

Now, continuing with our coverage of Hamvention 2002, lets look at the forums. Emergency communications was this years Hamvention theme and all of the sessions -- about 50 of them -- were in some way dedicated in some way to it. And while we could not visit every one of session, we do know that for all three days the forum rooms were packed. In fact, many sessions had people lined up against the walls and sitting in the aisles. That included our own Ham Radio Town Meeting that featured Popular Communications Editor Harold Ort, N2RLL as the keynote speaker. His theme: Emergency communications means more than just ham radio:

--
Harold Ort N2RLL: "I want to say that now is the time to learn to operate with other services in concert and not just with ham radio. That's really my message. And if you are wearing the blinders: If you are wearing the ham radio blinders -- take them off. Please.

I don't have all of the answers but I would like to have folks depart from business as usual. We have allot of smart people out there with specialized know-how.

And that's the beauty of ham radio. We can bring allot of radio users into the emergency communications mix so that we can help to make America safe.

Ladies and gentlemen: If we don't get it after 911, we really never will. Thank you very much. (Applause)
--

Ort's message: Its time to break down the barriers that divide us and work together for the good of our nation and the world. Or as Harold

himself said: If we don't get it after 911, we never will.

Another session that drew a stand room only crowd was the FCC forum with Bill Cross, W3TN. That one you can hear right now on the RAIN Report. Its on the web at in streaming audio www.rainreport.com or on the phone at 847-827-7246. (ARNewsline™)

**

DAYTON 2002 - A YEAR OF SURPRISE - PART 3

The Hamvention Grand Awards banquet was held on Saturday evening. This years recipients included Owen Garriott W5LFL and Tonly England, W0ORE who shared the Special Achievement award:

--
OwenGarriott W5LFL: "As perhaps you could tell from that brief introduction, hamming has been a part of my life for over 55 years. I started with my father and perhaps you can tell from the sequence of events in my professional career hamming was a very strong influence on the direction. I went to undergraduate school, to college and to a professional career after that.

I know that this story is not unique. In fact it wouldn't surprise me if there were some 10% to 20% of those of you in the audience who could provide a similar story about how hamming has influenced your professional career as well as your past-time in the area of ham radio.

I do want to thank all I the Amateur Radio community for the benefit it has been to me in directing and guiding all of my professional interests over the past 55 years: All of the way back to the time that my father asked me to come along to code school, to theory school and ending up in my getting my first license.

It has been a great career and I owe an awful lot of it to Amateur Radio. Thank you."
--

Tony England W0ORE: "It was probably in the 9th grade when one of the big blizzards was coming through West Fargo and they sent us home. I remember vividly: My bedroom was up on the 2nd floor. All of the now was blowing by the window and I was playing around with the radio and I was talking to this Pastor at a mission in South America. It was a jungle setting and he was describing what they were doing down there.

And you can imagine what an imagination expanding experience it was for a kid in North Dakota to be able to talk to someone living in the jungle of South America? It was that kind of experience that we were hoping to share when we talked to young peoples groups on Spacelab II through the Amateur Radio system. And it is something that I hope we pass on to other kids.

When maybe one of my granddaughters is a teenager and an Amateur Radio operator I hope that she has the chance to talk to a professional female engineer who is on a spacecraft on its way to one of the moons of Mars. So I hope that all of you keep up this good work and see that this happens. Thank you. (Applause)

--
Al Waller, K3TKJ, was next. He received this years Technical Excellence award for creating qsl.net:

--
Al Waller K3TKJ: "...With that and the insight of the Dayton Hamvention Awards Committee we have certainly legitimized another mode of communication for ham radio. The Internet is not the enemy of ham radio that I have heard professed so many times. It is just another mode of operation.

Today we have hundreds of thousands of QSL users on the Internet. It is a friendly place. The hobby is better for it and I am honestly proud to be a small part of it."
--

Then, the man that everyone was waiting to hear from. The 2002 Radio Amateur of the Year, Hap Holly, KC9RP of RAIN. His closeing remarks brought down the house:

--
Hap Holly KC9RP: "In closing, please allow me to borrow from this years Winter Olympics a familiar international theme that sums up my exhilaration at being selected to receive this award. Simply put: `the year 2002 has truly been my Gold Medal year' in the Olympics of Amateur Radio. I am indeed honored to be chosen as Radio Amateur of the Year by the Hamvention, but also to be the first person with disabilities to receive this plaque. Thank you very much. (Applause)
--

But there was another surprise. This one involved KC9RP, a radio and a company known as Alinco and our producer Bill Pasternak, WA6ITF:

--
Bill Pasternak WA6ITF: "Hi Hap. I'm changing my uniform tonight. I was asked by the wonderful folks at Alinco and ATOC Distributing any by Evelyn Garrison to represent them because they are at a business meeting. But Hap, they would like for you to have...your very own -- brand new -- DJ-196 two meter handheld as their token off appreciation for what you have done and for what you and Stephanie both do. Enjoy it my friend." (Applause)

--

But the surprises were over yet. At least not for KC9RP. When the dinner prizes were drawn, the first out of the barrel was Hap Holly. And in addition to the Alinco H-T, Hap also took home a brand new Icom IC-V8000 two meter mobile and base radio.

So what about those who attended. What do they have to say. As everyone was heading out of the HARA Arena following the close of Hamvention 2002, Bob Sherman, K2SJP, summed it up best:

--
Bob Sherman K2SJP: "Its the best Hamvention that I have been to."
--

K2SJP says that he plans on coming back. Many others Amateur Radio Newsline spoke said the same thing. (ARNewsline™)

**

INTERNATIONAL - UK: ON THE AIR EVENT
Turning to international news, word from GB2RS that members of the Preston Amateur Radio Society are operating GB2COP until the end of May. This, to celebrate Preston being granted city status during The Queen's jubilee year. Activity is on 40, 20 and 15 metres HF, plus 2 metres and 70 centimeters. QSL GB2COP with an SASE either via the bureau or direct to M1KIT. (GB2RS)

**

DX

In D-X, A group of operators from the Kuwait Amateur Radio Society will be active as 9K2F from Failaka Island until the 31st of May. QSL is via 9K2RA either direct or through the bureau. (RSGB)

Also, Team Vertical is heading back to Jamaica for the CQ WPX CW contest. The group will operate from 160 to 6 meters as their home calls slash 6Y5 until the 28th of May. They will participate in the contest as 6Y2A with six full gallon stations. QSL via WA4WTG. (RSGB)

**

THAT FINAL ITEM: THE HAMVENTION THOUGHTS OF W6AQ

And finally this week, another look at Hamvention 2002. This time, through the eyes of a ham who has been to many of them. His name is Dave Bell. His call sign is W6AQ and as Hamvention 2002 was drawing to a close he shared his thoughts with our producer Bill Pasternak, WA6ITF:

--
Dave Bell W6AQ: "This was a great Hamvention. Except for the weather on Friday it was absolutely perfect.

Bill Pasternak WA6ITF: "What was the highlight to you?"

Dave Bell W6AQ: "I think that the highlight for me was the special ARRL dinner on Friday night for donors to the ARRL where we heard Joe Taylor, K1JT, give a really, really interesting talk. He has got a big sense of humor for a Nobel Prize winner, I must say."

Bill Pasternak WA6ITF: "We saw allot of new products here. Anything catch your eye?

Dave Bell W6AQ: "Actually the Yaesu FT-1000 Field I probably would have bought instead of the Mark V if it had come out at the same time. And I must say that getting an FT-817 little radio for under $500 broke my heart because I paid twice that."
--

Hamvention 2002 is now history, but Hamvention 2003 is now less than a year away. Dave Bell, W6AQ, says he plans to be there. So will we, and we hope to see you there too. (ARNewsline™)

1773. Radio Crazy!!! Part ownership of AM for sale.

Newsgroup: rec.radio.broadcasting
Date: 2002-05-27 05:40:43 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <acsgsr$hl9$1@xuxa.iecc.com>
Source record: 10836

For sale:

Partial ownersip of AM radio station. Joint venture.

Active or inactive investors with at least $5,000 each
are welcome. All investors would be on the board with
full voting rights if desired.

Station is class "C" (formerly class IV) AM on 1490
Khz, 1 KW, fulltime. Licensed to Guthrie, Oklahoma
near Okla City.

We will bid $80,000 with $10,000 down. No real estate
or studio grear. Included IS transmitter, tower,
ground system, license and goodwill. Call letters will
have to be changed from present KOKC. Station on the
air since 1955. "Dark" now.

Please email or call (478) 741-1710 in Macon, GA
anytime.

No "AM bashers" or negative nabobs, PLEASE! Serious
only. Not for the weak-of-heart. There is an element
of risk and you could lose all or part of your
investment. (Legal disclaimer) Most likely that will
not be the case.

73,

Meyer Gottesman

Does anyone have any more info on MSNBC Investigates from last night? It was on people who were running pay webcam sites on the net.

I'm interested in starting my own web broadcasting pay channels for both audio and TV, and would like to find out more about how.

Thanks Kevin! As an engineer who installed a terrestrial repeater for XM, these are precisely the same observations that I made and was viscously attacked by the XMophobes for simply stating my opinion. I listened for a solid week while doing the installation and honestly, it got on my nerves. It reminded me of Jim Baker back in the old PTL days and how he kept reminding you to send in money for the Lord, only in Xm's case, "How great we are" every time a song ended. The lack of local content is going to kill XM. The majority of Americans don't "ride across country" everyday, once a year or likely in a lifetime. They drive to and from work and go 300-600 miles away for vacation. They don't "need" XM, XM "needs" them. And XM offers nothing better than the local stations.

Now "sound quality" wise, XM isn't any better than the local stations, in fact its not quite as good. I had to laugh at XM's PR Hype they posted on USENET about "XM is almost CD Quality". I suppose you could say that old wire recorder I've got stored in the attic is "almost CD Quality"....DUH!!!

All of this in conjunction with XM posting over a Quarter of a Billion in losses for last year, not meeting subscriber or sales projections and Sirius losing almost $200-million, you can see why the XM/Sirius Cult worshipers are so desperate to put a 'happy spin' on anything posted about them. One constant poster is a service provider and stock holder, another works in the XM PR Department, yet another is the program director (whatever that is at an automated service) for XM, and it would appear the entire XM staff is posting on USENET trying to make the service look like something it isn't. USEFUL!

As a service provider to XM, I suppose my review is as valid as anyone else's and I don't see any threat to Broadcasting from XM at all! Kind of like 3-D TV. Lots of hype, no delivery! I suppose for those

few people who must drive all the way across country, that must have Cuban-cigar-salsa-polka-punk-heavy-metal-country-cowboy-rap-reggae-specialty music, XM is their only hope. But for the rest of us, who drive to work and then back and want to know what the traffic is like, and the weather, local broadcaters will still have a vibrant market to live off of.

XM = Xtremely Mediocore!

The trials and tribulations of getting a currently dark station back on the air!

Listees. Someone can hopefully help us with the following after receiving this e-mail from my colleagues up there in Williamsport, PA:

Here is what we need like yesterday:

4 Tubes for the CSI 2.5kw Transmitter
Model: T-2 5-A1
Tubes: 8166/4-1000A

2 Tube Sockets
Part #: V9 & V10

We have been working almost all day and night. We have been working usually till 4:30AM(EST).

We had the tx on for a couple of hours on weak tubes and it did okay considering the fact that we had "harmonics" all over the dial and the tubes as bad as they are.

Also, the tower lights are out except for one marker light. Can you find out about this too.

If anyone has these parts lying around collecting dust do please let me purchase them at the right price to get this, our first station back running right.

Thanks

I really could care less if you like XM. In fact, the desgn of XM contemplated that about 98% of Americans would not want it. Just as I don't want avocado flavored ice cream, you don't want XM based on your experiences, rationally analyzed or not. Kuhl. That is what a market driven economy is about.

However, when you post blatent misinformation, someone has to say something. XM is ahead of all its subscriber projections, and they will meet the 2002 goal early if the current trend of sign-ups continues. And this is without contemplating manufacturer installed units coming mostly at the end of the year. BTW, since XM has a flat fee, subscriber and sales projections are the same thing. Please think about that one... and you may see that you are just misinterpreting the facts. With the amount of stuff on the net these days, that is perfectly understandable.

And 3 years ago, XM said it would loose nearly exactly what it has lost up to know. In business-speek, this is called "start up cash burn rate." XM is on track on its burn rate, too.

>One constant poster is a service provider and
> stock holder,

Yeah, after selling most of what I had, I have about 900 shares of XM Not enough to buy myself a used Honda Accord.

I _ do_ supervise 5 XM channels, but I do it for free, since I believe in the project. If XM does not work, I have no significant loss of either money (my initial investment was taken out 6 months ago... I cover speculative stocks by taking out my initial investment as soon as feasable) or employment (since I don't work for XM nor does my job depend on said success). However, I believe in the project (I know, I said that once already tonight!) and I am doing this for the pure bloody fun of it and loving it.

I hope everyone in radio gets to do a couple of fun projects that are more than jobs sometime in thier career. I'm lucky; I have done several. One or two were far more risky at the time than XM, like the first FM in Northern

South America in the mid 60's. Life has no guarantees... said with the knowledge that that is a trite sstatement... and I can't guarantee success to XM. But it is really fun to be in on a new form of entertainment deliver that just might be the radio of the future.

But, apparently anyone who does something for conviction, fun and challenge is being deceiptful and dishonorable.

And this the weirdest thing of all.

> another works in the XM PR Department, yet another is
> the program director (whatever that is at an automated service) for
> XM,

I have not seen Lee Abrams post here ever. Lee is the VP Programming of XM, the only VP of Programming they have. When did he post?

> As a service provider to XM, I suppose my review is as valid as anyone
> else's and I don't see any threat to Broadcasting from XM at all!

You are entitled to an opinion. I don't think anyone here, myself included, has challenged that. But it is wrong to post untruths and, when we peel the onion, saying that XM is behind projections is not true.

And I don't believe that XM is intended to threaten regular radio... it is intended to be a service for light or non-uesers of terrestrial radio, a small percentage of Americans but a big enough one to make both XM and Sirius very successful.

P.S. I have done a bit of listener research, and you would be surprised that there are huge percentages of listeners who don't want news and traffic and could care less about local content: "play my favorite songs."

1778. Re: XM review in AutoWeek

The article is now up at AutoWeek.com . The author might as well be working for Sirius's marketing department, though I don't think them that clever. He dislikes the commercials and clutter on XM music stations...the out-of-town commercial stations...the repetitiveness and tight playlists. XM's classic rocker sounds the same as the classic rocker in everyone's backyard...whereas he believes that the local stations should reflect local tastes. Had to laugh at his concept of driving to Nashville to hear bluegrass, New Orleans to hear blues. He also has Sirius "boasting" that all 100 of its channels are commercial-free, which in fact they do nowhere. Perhaps Sirius is advertising more heavily in AutoWeek or there's some other hidden agenda.

I am looking for information regarding work in the Outside Broadcast industry. I currently work as a Systems Engineering Technician in the forces and have had 7 years experience of Satellite Communications both mobile and static.
I will complete a few more years service yet but have set my sights on a job in the Broadcast industry and am keen to start preparing early.
I am looking for any information that would be of use ie: qualifications required, where to find vacancies advertised and contacts.
I would be grateful for any help.

[snip]

It is the continuos posting of misinformation by Russell that I object to
the most. He will post follow up messages to EVERY XM thread on the Usenet,
and all of his posts contain the same tired line of misinformation. It is
obvious to me that he has an agenda, but of course he denies that. I am one
of the people that Russell accuses of being an XM employee and I have never
worked for XM as an employee or a contractor. He is quite simply lying when
he posts such information. It is the pathetic ranting of a Usenet troll and
it does nothing but increase the noise level of this group. I really believe
that the group moderator should look more closely at the XM posts.

Tom

Likewise, I could care less that you don't like me posting my opinion about XM. It does seem to irritate you to no end. While I realize that some here think the world revolves around them, I'm only posting my opinion about XM, having installed a Terrestrial Repeater, listening for a solid week and reading public news sources that say XM is lossing money faster than it can go out and raise it.
>
> However, when you post blatent misinformation, someone has to say something.

Your beef isn't with me, its with KPMG LLP, a very reputable Accounting firm, AP, CNN and Radio World, all of whom have carried exactly what I have quoted here about XM. If you feel it is "blatent misinformation" then by all means take it up with the source and stop bellyaching to me, or insinuating that the source is me. Frankly I'll take KPMG LLP over yours or anyone else's word here on USENET.

My source for not meeting projections and no DUH, subscribers are sales, comes from Circuit City who is struggling to move the merchandise and said so in its monthly sales projection reports to all stores. Again, by all means, go to the source of this information if you feel you are the only authority on the topic and take it up with them, and stop the attacks on me.

Clearly you have a vested interest (900-shares) that only the happy spin on XM is publicly discussed. I have no vested interest. I don't own stock, I did one job for them, got paid, listened for one solid week and didn't find anything worth purchasing. I doubt either of us is convincing anyone to buy a unit one way or the other, but honestly, these tirades are becoming desperate and sad.

I have only quoted reputable news sources and accounting firms and expressed my personal opinion. I thought that's what USENET was about. Maybe you need an Eduardo Net where only those who agree with your spin on the subject are allowed to post. You'd be much happier.

A couple of minor semantic points---

David Eduardo wrote:
>
> I have not seen Lee Abrams post here ever. Lee is the VP Programming of XM,
> the only VP of Programming they have. When did he post?

Minor point: Abrams' business card says "Chief Programming Officer", not VP. There is apparently a VP of Programming, who seems to live in the shadows. AFAIK, Abrams runs the show, at least as seen from outside.

Minor point #2: Each person who actually runs each channel at XM is called a "Program Director", at least those inside the building. I guess this makes each of them feel good, even if the channel happens to be a one man band.

Banks have fancy titles for people who aren't paid very much. Could XM be doing the same in the case of "Program Directors"?

I don't think the question revolves around how well XM can burn through
cash. The dot.com graveyard is full of companies that had absolutely no
trouble doing THAT.

The question is: how well will its profit mechanisms work? That remains to
be seen.

> And I don't believe that XM is intended to threaten regular radio... it is

Interesting shift. Before it went on the air, most of the XM promotions
people were crowing about how broadcasting was in big trouble with
competition from satellite radio on the horizon.

> P.S. I have done a bit of listener research, and you would be surprised that
> there are huge percentages of listeners who don't want news and traffic and

Hmm...my research shows just the opposite. I'm willing to concede that
neither of us has performed scientifically valid polls.

I'm not surprised. My local Circuit City is treating the sale of XM equipment VERY casually. The salespersons are completely ignorant and the last time I checked, they STILL had no operating unit inside the store.

As a potential customer, I'm not sure I would be wanting to lay out hundreds of dollars up front and pay one-twenty a year for something I couldn't even play with beforehand.

>

I'm finally through with this. You have your agenda, I have mine. You can't read financial statements, I can.

Check back at year end and let's both see whether XM is at the projected number of subscribers (350 thousand is the forecast). Let's also see how Sirius does over time. Neither plans to make money for about 4 years, so we have plenty of time to play MMQB with them both.

FYI, an "ongoing concern" statement is put in by any accounting firm if a company has no income, is burn ing capital and will require more capital to reaches profitability. All the new (and unprofitable) biomed firms, Amazon.com and many others have the same statement in their annual reports because they are not yet profitable. Not making money does not mean a company is not on track towards doing so.

I'd frankly be more worried about Ford, a company that lost $5.4 billion last year on real ongoing operations. Heck, AOL wrote off $50 billion due to accounting rules changes and nobody said much of anything. And nearly every big company has hundreds of millions if not billions in debt... as the saying goes, "Somebody else's money" is the way to build an enterprise.

For the meantime, XM is on target on subscribers, revenues and past period losses. It was predicted, expected and normal for a startup. Whether you or I like or dislike the programming, keep in mind that the financials you paint are just inventions.

Let's meet here in December and see where the two satellite companies stand on subscribers.

P. S. If you had bought Circuit City stock this time 2 years ago, you would have lost 60% of your money; using their sales as a barometer of any electronics manufacturer's sales is inappropriate as Circuit City has gone through some rally tough times in the last few years.

Whenever people sound off about what is wrong with broadcasting today, one of the list toppers is "diminishing local content". They complain that syndicated programming and voice tracking have removed the invisible bond between the DJ and his audience.

If people think that local content is important for broadcasting, why would it be completely unnecessary on XM?

>is lossing money faster than it can go out and raise it.

I'm aware of no news source that is saying that. And, the reason they're not is that your statement is completely false! XM and Sirius have had very little difficulty raising the money they need.

Furthermore, you haven't understood that "ongoing concern" line you cite so often. Any start-up company that doesn't have significant revenues coming in and/or significant sums in its Accounts Receivable (easily visible evidence of near-future cash coming in) is going to draw that kind of labeling. It simply indicates that the company will need increased sales or additional funding from the equity market or the debt market if they're going to keep spending money like they are and stay in business. For a start-up, this is an "of course!" or "no duh!" kind of thing! Before seeing a dime of revenue, a start-up has the costs of infrastructure, staffing, training, product creation, and marketing. (In XM's case specifically, their burn rate went up dramatically when their marketing kicked in.)

C'mon, Russell! Just admit that this isn't your area of expertise (it's not exactly mine, either), apologize, learn, and move on!

>Your beef isn't with me, its with KPMG LLP, a very reputable

There's no need to do that -- they *know* what they're talking about and understand what they're writing!

>My source for not meeting projections and no DUH, subscribers are
>sales, comes from Circuit City who is struggling to move the
>merchandise and said so in its monthly sales projection reports to all
>stores.

Circuit City struggles to move *all kinds* of merchandise! While Best Buy's parking lots are full and people are browsing all up and down their display

aisles, Circuit City's parking lots are nearly empty and their 14 swarming salespeople are standing around talking about how much their jobs suck! (I know...I've overheard it) During a recent visit to Circuit City, I was approached once as I passed the digital cameras and twice more as I passed the computers. After finding the XM display, pushing all kinds of buttons on several receivers trying to get sound to come out, and standing there for ten more minutes without being approached back there, I went to Best Buy and listened to my heart's content.

Circuit City employees likely would not make good sources...

Pretty much what one might expect from a low-powered daytimer which is so new that the FCC database doesn't even show it as having a "notified" call sign.

I used to listen to WCBS all the time, just as background sound.

It still has exactly the same sound that I remember, but the news
format is news-stories-for-women or something, and unbearable to
listen to even idly.

That is to say, the news isn't what it used to be, if you're going
for that format.

How interesting. In the last few thousand personal interviews I have done,
never has anyone mentioned voice tracking. Nor have they mentioned
syndication as a defect. Obviously, none knew of either of these creations
by name, and none described on probing (45 to 50 minute personal interviews)
symptoms of either.

The first time I probed for this was when I had an automated station in
market #13; no one knew it was not live and no one could imagine that it was
not. It was also very #1.

Part of radio's problem today is that we make some issues into problems when
the listener does not perceive them as such.

I wouldn't rely on the Friendly Candy Company for info on Canadian stations.
They still have a listing for CBL/Toronto at 740. CBL moved to FM back in
1999, and last I heard the new 740 facility was CHWO. This was as of
January 2001.

If I am not mistaken, 730 in Vancouver goes back quite a number of decades and is a high power station. It is the old CKLG, once owned, I believe, by Moffat. It is 50,000 DA-2.

In the presentations I have seen, the marketing was always aimed at the idea that regular radio sucked. This appeals to the folks who think regular radio does suck. And that is enough people to make it an interesting business propositon.

Actually, I moderate or supervise very scientifically designed polls nearly every week. What you may fail to take into account is that many people are either in young demos where news and traffic are irrelevant... or they know that there is a station that does news well, but don't want it on their music stations... or they are the people who have short, surface street commutes that get no value form traffic reports. As I have said, there is a large body of listeners that do not want news and traffic, and an even larger one that does not expect that or want that on their music station.

And I see this from Miami to LA and from SF to Houston. Which probably explains whey there are so few all news stations, among other things.

In fact, they raised $200 million about 60 days ago, and the offering was oversubscribed by about 10%. XM just filed for a shelf offering of another $500 million, which theoretically takes them beyond the break even point. They have raised in excess of every offering they have made.

Yup, that's pretty apparent.

The FCC's database has been known to post DA patterns which were the mirror image of the licensed pattern.

Whenever in doubt, consult the station license, not the database or other public records.

However, it is difficult to consult a Vancouver, BC, station license from Monterey Bay, CA.

A nice station by the way, ``Prime Time Radio,'' audible all day in Central Ohio.
The last-station-you'll-ever-need format. (You do have to null away a Catholic
station in Cincinnati going after small boys.) There was a long time when they
couldn't decide what their call letters were going to be, and I think they lost
and carried over CHWO from their former frequency. CB* apparently belongs to
the CBC.

While I don't claim my software or my extractions from the FCC data are 100% correct, you might want to download them from http://www.qsl.net/w9aj . Larry Vehorn kindly converts the FCC data and uploads it most Fridays. We correct or flag all the location errors we can find in the TV & FM data. We are able to correct some of them, such as errors in state.

This software runs under Windows, although it is really DOS code. The QSL.NET site is a freebie and awfully slow at times.

I think an advantage of this s/w is that, once downloaded, data searches are very fast.

It also produces files to display the transmitter locations on Delorme Street Atlas maps - Versions 3 through 9, but not the new Deluxe version.

The FCC's Canadian and Mexican data "leaves a bit to be desired".

Bob C.

That isn't what I'm talking about at all. I'm not talking about news, traffic, or weather. I'm talking about the perception that the DJ is local, and speaking to a local audience. I beg to differ with you, but many people find this an important aspect of their radio listening. Many broadcasters feel this to be important enough to mimic it through advanced technology.

Interestingly enough, those efforts have paid off for the most part, in that the listeners appear to accept the idea that the DJ is local and talking to them. As you, yourself pointed out...most listeners are unaware of automation done well. Unfortunately, XM does not and cannot even pretend to have any local focus or flavor whatsoever. For that reason, I don't even look at it as radio but rather just a music delivery system (that just happens to be laden with gratuitous promos and ghostly imitations of classic radio formats).

Hopefully, the technology of extreme digital compression will improve to the point where a 64K bit rate for stereo doesn't make my skin crawl.

Well Spamtrapper you're new to the bashing, but the only opinion I've
stated, and you might want to go back and read them so your posts
don't look so totally lacking credibility, is that I installed a
Terrestrial Repeater for XM and listened to the feeds for one solid
week. How can that be lacking in facts? Huh? I didn't care for what
I heard. Are you suggesting that someone who listens to XM for a
solid week can't form an opinion that doesn't agree with yours and
because of that, their opinion lacks facts? How absurd can you be?

Again, you might want to read my posts, so you don't look so foolish.
I NEVER SAID THEY HAD TROUBLE RAISING MONEY! You did! I quoted AP,
CNN, Radio World and KPMG LLP. news releases, which I'll bet even you
could find with a modicom of effort. I have quoted and its completely
true that even Eduardo agree's that XM posted a loss of $284.4-million
for the past year and Sirius has posted a loss of almost $200-million.
Its not even debatable and if you have figures that prove otherwise,
by all means Einstien share them.

I understand and have stated fully that I understand the process
whereby a 'startup' goes through a recovery process before posting any
kind of profits. Its elementary my dear anonymous Spamtrapper. And I
agree this isn't your area of expertise and it shows. My point,
again, if you'd bothered to read what I've posted, is that neither XM
or Sirius will ever get the number of subscribers to recover those
losses. I've cited the poor sales figures from Circuit City and Best
Buy stores as an example. All you've done is attack me, in true XM
employee fashion, but offer no facts of substance other than you just
don't like me! Boo-Hoo, I'll lose sleep over it!!!! If anyone is due
an "apology" its me for your unsubstantiated, viscous attack, based on
what you readily admit isn't your area of "expertise".

Then why is XM marketing their products through this, source? I also
quoted Best Buy who isn't selling these XM units any faster than
Circuit City.
>
> >I have only quoted reputable news sources and accounting firms
>
> ...which you have not understood...

But you admit, the sources I quoted did understand it, so again, its
just another nasty personal attack at me, for stating my opinion, as
someone who was a bonafide contract engineer for XM and my opinion of
not caring for what I listened to during the week of the installation.
How could that not be "factual"???????
>
You boys in the XM PR Hype Marketing Department can do better than
"Spamtrapper" can't you? Please at least turn this over the Abrams,
at least he has a sense of humor and is moderately intelligent.

By the way Spamtrapper, what are your qualifications that makes you so
superior to anyone else that has actually worked for XM and listened
to them that you can dismiss my opinion as not being "factual" just
because you don't like it? You haven't shared your background that
you bring to the table that makes you the "AUTHORITY" and last word on
what is acceptable here. Please by all means share with us what makes
you King of rec.radio.broadcasting. Most of us use our real names but
for some reason you see fit to hide behind and anonymous handle then
post personal attacks. How very manly and honorable of you!

That isn't what I'm talking about at all. I'm not talking about news, traffic, or weather. I'm talking about the perception that the DJ is local, and speaking to a local audience. I beg to differ with you, but many people find this an important aspect of their radio listening. Many broadcasters feel this to be important enough to mimic it through advanced technology.

Interestingly enough, those efforts have paid off for the most part, in that the listeners appear to accept the idea that the DJ is local and talking to them. As you, yourself pointed out...most listeners are unaware of automation done well. Unfortunately, XM does not and cannot even pretend to have any local focus or flavor whatsoever. For that reason, I don't even look at it as radio but rather just a music delivery system (that just happens to be laden with gratuitous promos and ghostly imitations of classic radio formats).

Hopefully, the technology of extreme digital compression will improve to the point where a 64K bit rate for stereo doesn't make my skin crawl.

Well Spamtrapper you're new to the bashing, but the only opinion I've
stated, and you might want to go back and read them so your posts
don't look so totally lacking credibility, is that I installed a
Terrestrial Repeater for XM and listened to the feeds for one solid
week. How can that be lacking in facts? Huh? I didn't care for what
I heard. Are you suggesting that someone who listens to XM for a
solid week can't form an opinion that doesn't agree with yours and
because of that, their opinion lacks facts? How absurd can you be?

>

Again, you might want to read my posts, so you don't look so foolish.
I NEVER SAID THEY HAD TROUBLE RAISING MONEY! You did! I quoted AP,
CNN, Radio World and KPMG LLP. news releases, which I'll bet even you
could find with a modicom of effort. I have quoted and its completely
true that even Eduardo agree's that XM posted a loss of $284.4-million
for the past year and Sirius has posted a loss of almost $200-million.
Its not even debatable and if you have figures that prove otherwise,
by all means Einstien share them.

I understand and have stated fully that I understand the process
whereby a 'startup' goes through a recovery process before posting any
kind of profits. Its elementary my dear anonymous Spamtrapper. And I
agree this isn't your area of expertise and it shows. My point,
again, if you'd bothered to read what I've posted, is that neither XM
or Sirius will ever get the number of subscribers to recover those
losses. I've cited the poor sales figures from Circuit City and Best
Buy stores as an example. All you've done is attack me, in true XM
employee fashion, but offer no facts of substance other than you just
don't like me! Boo-Hoo, I'll lose sleep over it!!!! If anyone is due
an "apology" its me for your unsubstantiated, viscous attack, based on
what you readily admit isn't your area of "expertise".

1809. 10kW transmitter service

Newsgroup: rec.radio.broadcasting
Date: 2002-05-30 01:47:56 UTC
From: chris-google@pobox.com
Message-ID: <ad40ccgdh1@xuxa.iecc.com>
Source record: 10772

Hi -

I volunteer for a non-commercial radio station. We have a 10kW transmitter (Broadcast Electronics FM-10A, 1988) hooked up to a 12-bay Jampro antenna (1978) on a 340-foot tower. While the whole system was certainly well installed 14/24 years ago, and we have been doing some minor maintenance on the transmitter (e.g. air filters), we haven't done anything else. Lately we've been thinking we'd like to spend some money to have a professional come out and take a look at everything and tell us what needs further attention. For peace of mind if for no other reason.

This would include a complete inspection of the transmitter, inspection of the antenna array (corroded connections?), and hopefully a recalibration of our transmission line. The latter is desired because we want to eliminate a legacy waveguide zig-zag.

Anyone know if this kind of thing is offered as a professional service? How about in the Southeast U.S.?

Any tips would be appreciated. Thanks.

- Chris

i have only one thing to say to XM satellite service...it's called a 10 CD changer in the trunk. you can drive across the country and listen to only your favorite music and no announcer and no weather and no local content...but you do get CD quality! XM will be what it will be in it's own time. what we say in here will have little effect on the consumers...they tend to do what they want....remember when people said FM would never work? but then again FM was better than AM. is XM better than FM or even AM? and just remember an mp3 recorder/player can store hours and hours of music on one cd. can XM beat that?

Just a thought

Gregg

OK. I misunderstood the focus of your comment. I agree with you now that I
understand.

There definitely are people looking ofr some local content; similarly, there
are many who don't care at all.

There are only about a score of all news stations in the whole country; San Francisco has one.

And, with 26 sampling units and an extensive geography in the Arbitron MSA, there are only a couple of stations that cover the whole thing. None are FMs. And that is without discussing the terrain issue.

Check with the SBE, Society of Broadcast Engineers, for a local chapter in the area. Then contact the chapter head and ask for advice and names of qualified members. Or, call the engineer at a local commercial station you think is a quality operation and ask if he has advice. Engineers are a friendly sort, and not as jealous as the programmers. ;-}

I agree with you on CDs and MP3s..
However, XM almost has to appeal to a different audience.

CDs have been around long enough that the people who want to put a 10 disc changer in the trunk have done so. Radio has already lost audience to recorded music in cars. It probably won't lose much more. It may lose more to satellite, but only time will tell.

I think terrestrial radio is going through a long term transformation into a different kind of service. Localism seems to be on the way out and "centralcasting" is becoming the norm. To a lesser degree, this is also going on in television.

It seems to me that these changes will eliminate many of the reasons people had for listening to terrestrial radio in the first place. If that causes profits to drop,(and I think it will) it will force station owners to change again.

arnold

You need to have an engineering study of the whole set-up.
My guess is you are generating about 100kw erp with that rig.
You are probably sending large amounts of power great distances
at the expense of listeners in your immediate vicinity.

You really need to have a 6-bay antenna with about 40kw input for
maximum impact with the same erp.

Don't ask me how I know.

I'm really sorry to hear about the firings, Mike, having gone through this sort of thing myself a couple of times before. Especially because I've worked with some of the people there over the years, like Dave Tait, Chris Laudien, Linda O'Connor and my pet-loving former co-host, Andrea Ring. I hope everyone's able to find work, because there isn't much out there.

It just shows you how much the radio business has changed. When I was a kid, 'LG was the Big Rocker and Boss Jocker, and the only person I knew who listened to FM was my dad, because about all that was on FM in Vancouver then was classical music. Now, FM has all the rockers. It doesn't leave much for AM.

1817. receiving ham signals on Sony SW7600g

Newsgroup: rec.radio.broadcasting
Date: 2002-05-30 12:27:14 UTC
From: ashish.balaya@honeywell.com
Message-ID: <ad55r2$k5a$1@xuxa.iecc.com>
Source record: 10780
Cross-posted to: rec.radio.shortwave,rec.radio.amateur,rec.radio.broadcasting

I have a Sony SW7600g for about a year now, great radio. I was in the US and could receive some ham signals on SSB while there. I'm currently back in India and have been trying to receive some ham stations but have been unsuccessful so far. I have a 20 foot randomwire antenna strung up in my living room that I use, mostly at night (around 1700 UTC), but can't get anything.

Any ideas on what I can do to catch some ham stations? Any special bands I should listen on in this part of the world? I picked up a couple of pages on the web listing the ham bands and have been trying on the 160, 80, 40, 30, 20, 17, 15, 12 and 10 m, but could barely catch a couple of stations. I did get something on the 15m band last night, but just couldn't clear it up. It didn't seem to be English, so I gave up.

Any help would be greatly appreciated, especially if there are ham operators in India who transmit at night - I would love to hear you guys. I'm in Bangalore, in the Southern part of India. Also, anyone in any other country who thinks I might catch him can send me mail. That would be a real thrill - getting someone from so far away.

Thanks in advance,
Balaya

1818. Seattle: Ackerley/Clear Channel busts "The Beat"

Newsgroup: rec.radio.broadcasting
Date: 2002-05-30 12:27:16 UTC
From: joe_capitano@foxinternet.net
Message-ID: <ad55r4$k5r$1@xuxa.iecc.com>
Source record: 10781

Strange week 'round these parts. First KYCW goes back to Classic Country, then NW2 goes bye-bye, now this:

As from 6 pm tonight, the station formerly known as "The Beat 95.7 FM" (Call sign KBTB - for "Keep Bustin' The Beat") suddenly became "Quick 96."

Let's just call it what it is: "Short Attention Span Radio." The station now plays 7-second clips of songs, "only the best parts" they say - over 400 an hour. Each is introduced by a number which links to the playlist found on the station's website - http://www.quick96.com (webcast available if you want to sample this).

No commercials, either, though the website has a full page of sponsor logos.

It's clear and obvious. This is a stunt, but it's a heck of a lot better than the obiquitous sound of the ocean I've heard used often during times of transition.

Let's see what the CC boys come up with next (and how much face they may have to wipe from their egg if this is serious)...

BTW: The last song played on the late "Beat": "Last Dance" by Donna Summer, what else?

Joe Capitano

That is correct. From my standpoint, however, if I am going to pay a premium price for a specialized car stereo and then further have to pay on a monthly basis, why not just get the exact music I want to hear with better audio to boot?

For sale:

Partial ownership of AM station near Oklahoma City is still for sale. We seek active or inactive investors with $5,000 min. (Was 10K now 5K). All investors will be on the board with full voting rights if desired.

Station is a class "C" (Formerly called Class IV, silly!) AM. 1 KW full-time. NO real estate is included. Station is "dark".

Total consideration is only $85,000 with $20,000 down and a 3 year payout at 7 percent APR. Seller financing.

I am not a "shill", broker or agent. Nor am I a crook or scam artist or any other kind of artist! HI!

Those wishing for more information may get an answer by identifying yourself and your true motives. If you don't love and trust AM as a medium please save me and yourself some time and don't reply!

If you are stupid enough to expect a formal business plan when this station is already almost being "given away", then don't reply!

If you don't have $5000 or more available immediately, don't reply!

If you have a "chip" on your shoulder and assume every human being is a crook and want to "run off to Brazil" please don't reply. (I have held a secret level clearance and once was a comm. tech for a MAJOR city Police Dept, to wit San Francisco.)

Tel: (478) 741-1710 in Macon, GA.

I agree with you. But obviously others like the notion of forking over big bucks for the newest gadgets. I really think there's just a contingent of people who want to "let someone else do it." They don't want to worry about picking out the music or putting the discs in the changer - they want someone else to do it. Fine. Let em. :)

Five years from now we'll have a pretty good idea whether or not satellite radio is serious competition for regular radio.

1823. Re: XM review in AutoWeek

Newsgroup: rec.radio.broadcasting
Date: 2002-05-30 20:32:09 UTC
From: spamtrapper77@cs.com
Message-ID: <ad6289kc1@xuxa.iecc.com>
Source record: 10785

Russell came back with:

>Well Spamtrapper you're new to the bashing,

Nah...been around more than a decade. I've just been fairly quiet lately. And, as far as "bashing" goes, that Tom What's-His-Name in Dallas with the pet guitar is the only person I've ever bashed. I feel guilty about it, but I would do it again!

>but the only opinion I've
>stated...is that I installed a
>Terrestrial Repeater for XM and listened to the feeds for one solid
>week.

You don't seem to recognize that your total misinterpretation of the financial information you're citing equals opinion. If you understood the usage and/or context of those phrases, you could not (or at least likely would not) logically be reaching the same conclusions and having the same wild complaints.

>I didn't care for what I heard.

THAT, I have no problem with. THAT is a perfectly fine opinion. I don't agree, but I won't argue at all with that.

>I quoted AP,
>CNN, Radio World and KPMG LLP. news releases,

...with no understanding of what they mean and *don't* mean whatsoever.

>I have quoted and its completely
>true that even Eduardo agree's that XM posted a loss of $284.4-million
>for the past year and Sirius has posted a loss of almost $200-million.
> Its not even debatable and if you have figures that prove otherwise,
>by all means Einstien share them.

As I did in another newsgroup, I'll just paraphrase that and see if it helps:

"Investing primarily in infrastructure, staffing, and advertising, XM used $284 million (and Sirius $200 million) of available cash during the year as they made final preparations and brought their products to market."

Help?

>I understand and have stated fully that I understand the process
>whereby a 'startup' goes through a recovery process before posting any
>kind of profits.

If the money came from an equity offering, NO, they do not!

>And I
>agree this isn't your area of expertise and it shows.

Maybe I should share my definition of "expertise." I would consider those in the population at and above the 99th percentile in knowledge in a subject to have "expertise." Based upon that, I would not claim expertise in the area of finance. I would, however, guess myself to be around the 80th percentile. I won't be in the running the next time the CFO position opens up with my (or any other) company, but I have no difficulty at all handling the numbers we use every day, digesting our financial statements, and reading our's and other's annual reports.

Your posts here indicate that you cannot do the same. Not an insult...not a flame...just a statement of what I and others have observed. And, one of the most frustrating things about this is that, if you would take the time you spend in these newsgroups trying to denigrate sat radio and use it to learn some of these phrases and how and when they're used, you could very easily understand what we're saying and why we don't share the same concerns you have.

>My point,
>again, if you'd bothered to read what I've posted, is that neither XM
>or Sirius will ever get the number of subscribers to recover those
>losses.

...and they don't necessarily have to....

>I've cited the poor sales figures from Circuit City and Best
>Buy stores as an example.

You talked about CC and tacked on Best Buy only after David and I pointed out CC's difficulties.

>All you've done is attack me

Nope...just making corrections in about the same tone of voice (text?) you're using.

>> they *know* what they're talking about and
>> understand what they're writing!
>
>Then if they *know* what they're talking about and understand it, and
>I'm only quoting them, how could I be at fault?

Easy...you don't understand what it means and *doesn't* mean and, thus, reach the wrong conclusion. If this were a financial group, you would have been killfiled or laughed out.

>> Circuit City employees likely would not make good sources...
>Then why is XM marketing their products through this source?

New products are thrilled to be available through every appropriate outlet possible! Do you have any idea how tough it is to get shelf space for new products?

>so again, its
>just another nasty personal attack at me, for stating my opinion,

No, it's not personal. Where you don't make mistakes in facts, you tend to have misunderstandings of them. Just trying to set the record straight...

> as
>someone who was a bonafide contract engineer for XM

Ok, fine. But, I'm not going to consider the bonafide mechanic who maintains my car (and he's a darn good one!) to be an expert on the finances and financing of the car's manufacturer!

> and my opinion of
>not caring for what I listened to during the week of the installation.

THAT part is absolutely fine with me...!

>You boys in the XM PR Hype Marketing Department can do better than
>"Spamtrapper" can't you?

I'm sure they can. I'm not one of them. I'm not an employee, a contractor, or a stakeholder of any kind. Wait a minute...I slightly have to take that back. My company has a connection, but I am not involved with that connection at all.

>Please by all means share with us what makes
>you King of rec.radio.broadcasting.

I claim no royalty. The moderator is king...long live the king!

>Most of us use our real names but
>for some reason you see fit to hide behind and anonymous handle then
>post personal attacks.

No, no personal attacks. Anonymous? Yes -- the reason is that I hate spam and want to keep it away from my real account as much as possible.

C'mon, Russell...take the time you waste here and do a little learning! If you don't like the product, fine. Just don't misrepresent it.

>it be completely unnecessary on XM?

Having an XM or Sirius-enabled radio does not remove a local
listener's ability to receive local content at the push of one button.

XM may not affect the "persons using radio" figures for a long time.
When the only way one can be uncounted is to hear no radio for 168
straight hours, it takes a lot to not be counted, and its amazing that
one in twenty is already in this group.

But measured commercial radio in the continuously measured markets is
losing 1.5 minutes of listenership every three months, and other
choices can only make that erosion quicker.

Reading http://www.quick96.com/957TheBeat.htm hints it may not be a format switch after all. "Since that initial splash, you've told us that you still enjoy listening to KBTB, but you'd enjoy listening more if we made some changes." Hmm.

Apparently the wraps come off at noon friday. Wonder if this will be posted before or after.....

How do radio stations decide on playlists for different styles of music? If I was going to start a station that played 'Classic Rock' or 'Oldies' or 'Country' how does the program director decide the playlist? Where would someone even start?
I read here that there is too much analysis going on and the playlists are boring but where do they do this analysis and if it is a bad idea and the playlists are "boring" then why do the program directors use them?
Also, besides TM Century, who sells music libraries to Radio Stations.
Thanks for any answers!
George

> playlist? Where would someone even start?

Generally, staitions starting out take all the songs they think may be
familiar and liked and test them with a sample group of listeners or
potential listeners. THe ones that score broadly acceptable get played; the
ones that are highly negative do not get played.

> I read here that there is too much analysis going on and the playlists
> are boring but where do they do this analysis and if it is a bad idea
> and the playlists are "boring" then why do the program directors use
> them?

Most people in this group are music freaks and purists of one sort or
another. Generally, listeners want to hear familiar songs they still like
(in the case of classic rock). If songs are no longer liked, they don't get
played. If songs were never broadly familiarized, they don't get played.

> Also, besides TM Century, who sells music libraries to Radio Stations.

Radio Express in Burbank, CA, has the RadioPlay weekly new song disks as
well as libraries in a number of formats. Cheaper than TM, too.

I am starting a website about Broadcasting stations in Central America
and the Caribbean, listed country by ciountry in an easy to read
format.
Each country can be linked to frequency lists of AM/FM/TV stations.

You are invited to see it at:

http://www.stevenwiseblood.com/

Dear Umar:

Thansk for email. I got a chuckle. I am the fellow who
is trying to buy the AM station in Oklahoma.

As an aside, in 1974 I was the wireless operator
aboard the Golden Hinde II, the famous Sir Francicis
Drake pirate ship replica. It sailed from Plymouth,
England to San Francico making stops in Panama and
Acapulco, Nexico. I signed on in Panama as the
"sparks" became ill. I was flown down from San
Francisco. I signed off in Acapulco being on the high
seas for about two weeks. I'm a ham since 1950.

73,

Meyer Gottesman, W6GIV (ex-W2FCJ)

It's important but not important on all stations. There is no need
for local content for, say, a classical jukebox. Just a good (and large)
playlist, safely away from the WCRB syndrome and "Classical Music for
Elevators".

Why is it that I cannot imagine that a national classical playlist would be
anything but all-the-hits-all-the-time? Classical Music for Elevators might
just seem avante guarde by comparison.

Because the Beethoven Satellite Network, a national classical service,
most emphatically is not "all the hits all the time". It has an
excellent
balance of great works and interesting lesser known works and
uninteresting
blah lesser "grest hits" (i.e. Pachelbel Canon).

I think something that hasn't been discussed on this forum, but should
be, is the very real possibility that in order for XM and Sirius to
remain solvent, they will have to soon sell ad time.

The enormous start up costs and overhead are killing them. I think
terrestrial stations will soon see the competition from the Satellite
providers for National accounts. XM and Sirius will be begging for
business because they will have no ratings they can point to and the
sales of receiver/subscribers are lagging behind projections. But its
a very real possibility they will have to take on commercials to keep
their heads above water.

I think these two entities are about to get a dose of the real world
and will probably try a merger to stave off bankruptcy or try
desperately to find some kind of hook or niche to keep it solvent.
The marketing of the service has been pretty good, TV, Billboards and
Radio, saw a few print ads that were pretty good, but the retailing of
the receivers has been pitiful and inconsistent. If they don't get
the receivers to people, they don't get subscribers. I think too,
we'll see, very soon, the same tact used by the little dish folks
where they'll give you the receiver and installation if you promise to
subscribe for a year or two. Don't spend your money on a receiver
right now, they'll be giving them away in no time.

Anyone else seeing the same retail fiasco we have in the SE US?

> I've never owned a station, but have worked in the commercial radio
business since 1983. First, if the station is dark and being "given away" it
is hardly stupid to want to see a business plan, demographic analysis of the
market, and expected break-even date. If it's too good to be true... What
programming is available in that market.? Who are the players?
Also, it's failed at least once. Does that mean it's a bad buy? No. But if
it were my money, I'd be very cautious.
Mr. Gottesmann, it is not my intention to pour cold water on your campfire,
but a dark, rimshot, graveyard-channel AM with a $65,000 debt to be paid in
36 months (plus operating costs!) you need to pull a lot of revenue...and it
may not even be available in the market. To compound matters, studios need
to be built. I have no doubt your expertise will save the station
considerable money on the tech side-but to my mind it doesn't add up. I
sincerely wish you luck, sir.

XM is quite clear about selling 6 minutes an hour on a portion of the music
channels. It is and has been a part of the overall business plan. The Sirius
model does not include commercials;t hat is perhaps why it is 30% more
expensive.
>
> The enormous start up costs and overhead are killing them.

The start up costs are pretty much in line with projections. They don't at
present have any need to change the business plan, although that could
change in either direction in the future.

> I think
> terrestrial stations will soon see the competition from the Satellite
> providers for National accounts.

Not liekly, At this year's projected levels of subscriptions, there will be
less than a half-million satellite subscribers by 12/31/02. A single
mid-range Philadelphia FM cumes more than that. In any case, the advertising
XM could get would be national network business, not national spot. National
spot is sold and bought on a market by market basis, while network is based
on national coverage. Most stations don't see any network money, ever.

You have made this point before. Perhaps we can calm down after Steve's admonishment and you can explain why you think this is true when the financial reports and projections all show the two services ahead of projecitons and having plenty of cash to continue operations through the 2005-2006 break point into profitability.

Can you describe what evidence you have that shows that all the reports are false and the services are behind on projections?
>
> I think these two entities are about to get a dose of the real world
> and will probably try a merger to stave off bankruptcy or try
> desperately to find some kind of hook or niche to keep it solvent.

The idea that the two would eventually merge has been tossed around for as long as XM and Sirius have had licenses. For the consumer, this would be a mixed blessing. On one side, no confusion. On the other, no competiton for a captive market.

> The marketing of the service has been pretty good, TV, Billboards and

I have seen some really prominent displays, with capable staff. I have also heard of bad displays, playing CDs with no one knowledgable. Sounds like the store managers have to be better trained by both services. However, considering that I would never ask a Circuit City employee for advice or information, this is probably par for the course in electronics retailing.

> I think too,
> we'll see, very soon, the same tact used by the little dish folks

When the economies of scale come around, this is probable. Five or six years after my first DTV hookup, I could now get the hardware for free. As it was, I paid over $400 dollars with installation. And I paid $600 in 1990 for my first cell phone, and now I can get one of those for free, too. When I put in my first DSL about 4 years ago, I paid $400 for the install and connection charge; I put DSL in my second home last month for $49 including the first month's service. I think you are right on this... in a year or tow, the hardware will be free, at least in the aftermarket.
>
> Anyone else seeing the same retail fiasco we have in the SE US?

No.

The "independently audited" financial reports of Enron looked stellar just before the collapse. I wouldn't put a whole lot of stock in what the companies claim. Remember, they still need capital and they are not just about to admit to losing their shirts.

I'm not saying they are in bad shape, only that one shouldn't put a lot of stock in their financial reports.

> Can you describe what evidence you have that shows that all the reports are
> false and the services are behind on projections?

Nor is there any evidence that they are accurate. Events of the past year should have been a lesson to people that in addition to financials, one needs to use some common sense and intuition when judging the viability of a particular company.

I have given several local retailers the opportunity to sell me on XM. All have failed miserably. They know nothing about the product, have no reasonable, working display, and don't even have all the models they sell available for examination (you have to order some of them). When I spend that kind of money, I want to see what I'm getting...especially on a new product.

I have noticed the same thing, and indeed, I have one DTV receiver that cost me a cool grand and one that was under $100. The second one runs rings around the first in features and capability. In any event, I am through being the beta tester on new products. If satellite radio actually survives the next several years and the prices come down on the receivers, I may partake. I'm certainly not going to buy until the retailers get their acts together.

This is not the end of the world.

One nice thing that comes with real deep niche programming, is that there is the possibility that you as a listener might actually be interested in what is being advertised.

Also, there's the possibility that the services establish some standards on what spots they'll accept.

Many, many years ago, stations like KFAC in Los Angeles and WFMF in Chicago were very picky about the commercials they'd accept. KFAC insisted on live copy with no jingles.

If advertisers are willing to spend the money for the production, there are ways to integrate the commercials and not irritate the listener.

Commercial radio isn't in a position to say no to the car dealers for whom Eventide Harmonizers, shouting announcers and compressors seem to sell more cars. Maybe XM and Sirius will be able to.

I doubt it has anything to do with the Capital Radio Group plc.
There are lots of stations called Capital FM around the world, and none of
them have anything to do with the Capital Radio Group plc.
This is just another one.
Capital are too busy thinking about buying GWR.

I tend to doubt that. Americans have become inundated with advertising to the point where promotions of every kind are becoming increasingly ineffective. Look what happened to website banner advertising, which many thought was going to become the hottest way to sell in history.

We get junk phone calls, spam, junk faxes, advertising blurbs over the loudspeakers at gas stations, supermarkets, department stores, and other public areas. In the post dot.com era, commercial broadcasters are scraping the bottom of the barrel with health frauds and business investment scams in an attempt to fill advertising schedules.

It is very difficult to believe that a brand new, completely unproven medium will dutifully confine itself to tasteful spots promoting only products with class.

The public inspection file for all classes of commercial broadcast stations
is described in detail in 73.3526 of the FCC Rules and Regulations,
available from the FCC website http://www.fcc.gov

It is a collection of documents each station is required to offer up for
public review. For the best definition and description, go to the FCC
website and look for "The Public and Broadcasting" and scan to the Public
File part.

http://www.fcc.gov/mb/policy/docs/manual.html

Here is most of it:

THE LOCAL PUBLIC INSPECTION FILE
Requirement to Maintain a Public Inspection File. Our rules require all TV
and radiostations and applicants for new stations to maintain a file
available for public inspectioncontaining documents relevant to the
station's operation. The public inspection file generallymust be maintained
at the station's main studio. To obtain the address and phone number ofa
station's main studio, consult your local telephone directory or call
information.

Return to Table of Contents
Purpose of the File. As discussed above, stations have an obligation to
serve their localcommunity's needs and interests and to comply with certain
programming and other rules. Because we do not monitor a station's
programming, viewers and listeners are a vital sourceof information about
the programming and possible rule violations. The documents in eachstation's
public inspection file have information about the station that can assist
the public inthis important role.

As discussed above, all stations have an obligation to cover important
issues facing theircommunities, to comply with requirements governing use of
their facilities by candidates forpublic office, and to refrain from airing

indecent programming during times children arelikely to be in the audience. In addition, TV stations must air educational programming forchildren and limit the amount of advertising in children's programs. We encourage acontinuing dialogue between broadcasters and members of the public to ensure that stationsmeet their obligations and remain responsive to the needs of the local community.

Return to Table of Contents
Viewing the Public Inspection File. The station must make its public inspection fileavailable at its main studio at any time during regular business hours. Although you do notneed to make an appointment to view the file, making one may be helpful both to the stationand to you.

A station that chooses to maintain all or part of its public file in a computer database mustprovide you a computer terminal if you wish to review the file. If they want, they may alsopost their public file on the station's World Wide Web site on the Internet. If you want toview a station's public file over the Internet, you should ask the station if this is possible.

You may request copies of materials in the file by visiting the station in person. In addition,if the station's public file is located outside of its community of license (and you live withinthe station's service area and your request does not involve the station's political file), youmay also request copies of materials in the file over the telephone. To facilitate telephonerequests, we require stations to provide you a copy of this manual free of charge if you wantone. The manual can help you identify documents you may ask to have mailed to you. Stations can assist callers in this process and answer questions you may have about the actualcontents of the public file. This information includes, for example, the number of pages andtime periods covered by a particular ownership or children's television programming report,or the types of applications actually maintained in the station's public file and the dates theywere filed with the FCC. We also encourage (but do not require) stations to place thedescriptions of their public files on any Internet home page that they maintain. You pay forany photocopies, and the station may require a guarantee of payment in advance (such as witha deposit or a credit card). The station must pay postage for copies requested by telephone.

Return to Table of Contents
Contents of the File. Stations must keep the following materials in their publicinspection file:

a.. The License. Stations must keep a copy of their current FCC license in the public file, together with any material documenting FCC-approved modifications to the license. The license reflects the station's technical parameters (authorized frequency, call letters, operating power, transmitter location, etc.), as well as any special conditions imposed by the FCC on the station's operation. The license also indicates when it was issued and when it will expire.

b.. Applications and Related Materials. The public file must contain copies of all applications filed with the FCC that are still pending before

either the FCC or the courts. These include applications to sell the station (technically known as "assigning" or "transferring" the license) or to modify its facilities (for example, to increase power, change the antenna system, or change the transmitter location).
Also, the station must keep copies of any construction or sales application whose grant required us to waive our rules. Applications that required a waiver, together with any related material, will reflect the particular rule(s) that we waived.

The station must also keep renewal applications that we granted for less than a full license term until final grant of their next renewal application. We may grant such short-term renewals when we are concerned about the station's performance over the previous term. These concerns will be reflected in the renewal-related material in the public file.

c.. Citizen Agreements. Stations must keep a copy of any written agreements they make with local viewers or listeners. These "citizen agreements" deal with programming, employment, or other issues of community concern. The station must keep these agreements in the public file for as long as they are in effect.

d.. Contour Maps. The public file must contain copies of any service contour maps or other information submitted with any application filed with the FCC that reflects the station's service contours and/or its main studio and transmitter location. These documents must stay in the file for as long as they remain accurate. Not all stations are required to have contour maps.

e.. Material Relating to an FCC Investigation or a Complaint. Stations must keep material relating to any matter that is the subject of an FCC investigation or a complaint that the station has violated the Communications Act or our rules. The station must keep this material until we notify it that the material may be discarded. Since we are not involved in disputes regarding matters unrelated to the Communications Act or our rules, stations do not have to keep material relating to such matters in the public file.

f.. Ownership Reports and Related Material. The public file must contain a copy of the most recent, complete Ownership Report filed for the station. This report has the names of the owners of the station and their ownership interests, lists any contracts related to the station that are required to be filed with the FCC, and identifies any interest held by the station licensee in other broadcast stations.

g.. List of Contracts Required to be Filed with the FCC. Stations have to keep either a copy of all the contracts that they have to file with us, or an up-to-date list identifying all such contracts. If the station keeps a list and you ask to see copies of the actual contracts, the station must give them to you within seven days.
Contracts required to be maintained or listed in the public inspection file include:

1.. contracts relating to network service (network affiliation contracts);

2.. contracts relating to ownership or control of the licensee or permittee or its stock. Examples include articles of incorporation, bylaws, agreements providing for the assignment of a license or permit or affecting stock ownership or voting rights (stock options, pledges, or proxies), and mortgage or loan agreements that restrict the licensee or permittee's freedom of operation;

3.. management consultant agreements with independent contractors, and station management contracts that provide for a percentage of profits or sharing of losses.

h.. Political File. Stations must keep a file containing records of all requests for broadcast time made by or for a candidate for public office. The file must identify how the station responded to such requests and (if the request was granted) the charges made, a schedule of the time purchased, the times the spots actually aired, the rates charged, and the classes of time purchased. The file must also reflect any free time provided to a candidate. The station must keep the political records for two years after the spot airs. You can find the political broadcasting rules elsewhere in this manual.

i.. Annual Employment Reports and Related Material. We require all radio and TV stations to afford equal opportunity in employment. We also prohibit employment discrimination on the basis of race, color, religion, national origin, or sex. We require stations to file reports annually describing how they have complied with these policies. However, some of the specific rules implementing these policies were struck down by the D.C. Circuit Court in 1998. As a result, we are in the process of studying them to make them consistent with the court's requirements.

j.. Copies of this Manual. Stations must keep a copy of this manual in the public file. You can also read it on our Internet web site at http://www.fcc.gov/mmb/prd/docs/manual.html [see also Where to Obtain below].

k.. Letters and E-Mail from the Public. Commercial stations must keep written comments and suggestions received from the public regarding their operation for at least three years. Noncommercial stations are not subject to this requirement.

l.. Issues/Programs List. Every three months, all stations must prepare and place in their file a list of programs that have provided their most significant treatment of community issues during the preceding three months. The list must briefly describe both the issue and the programming where the issue was discussed. The stations must keep these lists for the entire license term.

m.. Children's Television Programming Reports. The Children's Television Act of 1990 and our rules require all TV stations to air programming that serves the educational and informational needs of children 16 and under, including programming that is specifically designed to serve such needs. In

addition, commercial TV stations must make and retain Children's Television Programming Reports identifying the educational and informational programming for children aired by the station. (Noncommercial stations are not required to prepare these reports.) The report must include the name of the person at the station responsible for collecting comments on the station's compliance with the Children's Television Act. The station has to prepare these reports each calendar quarter, and it must place them in the public file separately from the file's other material. Stations must keep the reports for the remainder of their license terms. You can also view each station's reports on our web site at http://svartifoss.fcc.gov:8080/prod/kidvid/prod/kidvid.htm.

n.. Records Regarding Children's Programming Commercial Limits. The Children's Television Act of 1990 and our rules limit the type and amount of advertising that may be aired in TV programming directed to children 12 and under. On weekends, commercial television stations may air no more than 10.5 minutes of commercials per hour during children's programming, and no more than 12 minutes on weekdays. Stations must keep records that substantiate compliance with these limits for the remainder of the license term.

o.. Radio Time Brokerage Agreements. A time brokerage agreement is a type of contract that generally involves a station's sale of discrete blocks of air time to a broker, who then supplies the programming to fill that time and sells the commercial spot announcements to support the programming. Commercial radio stations must keep a copy of every agreement involving: (1) time brokerage of that station; or (2) time brokerage by any other station owned by the same licensee.

p.. List of Donors. Noncommercial TV and radio stations must keep a list of donors supporting specific programs for two years after the program airs.

q.. Local Public Notice Announcements. When someone files an application to build a new station or to renew, sell, or modify an existing station, we often require the applicant to make a series of local announcements to inform the public of the application's existence and nature. These announcements are either published in a local newspaper or made over the air on the station, and they are intended to give the public an opportunity to comment on the application. Copies of these announcements must be retained in the public inspection file.

r.. Must-Carry or Retransmission Consent Election. There are two ways that a broadcast TV station can choose to be carried on a cable TV system: "must-carry" and "retransmission consent."

a.. Must-Carry. All TV stations are generally entitled to be carried on cable television systems in their local markets. A station that chooses to exercise this right receives no compensation from the cable system.
b.. Retransmission Consent. Instead of exercising their "must-carry" rights, commercial TV stations may choose to receive compensation from a cable system in return for granting permission to the cable system to carry the station. This option is available only to commercial TV stations.
Every three years, commercial TV stations must decide whether their

relationship with each local cable system will be governed by must-carry or by retransmission consent agreements. Each commercial station must keep a copy of its decision in the public file for the three-year period to which it pertains.

Noncommercial stations are not entitled to compensation in return for carriage on a cable system, but they may request mandatory carriage on the system. A noncommercial station making this request must keep a copy of the request in the public file for the duration of the period to which it applies.

>providers for National accounts. XM and Sirius will be begging for
>business because they will have no ratings they can point to and the
>sales of receiver/subscribers are lagging behind projections.

Why would terrestrial stations face competition from satcasters if satcasters have no subscribers?? (And, they're *ahead of* projections...why can't you get that??)

Aliens.

Seriously, can you describe the sound? What you may have is a neighbor with a light dimmer, or a typically-Summer power line noise causing blanket interference on the AM dia.. Is the interference to the station, or all across the band? If it all th eband, it is man-made usually.

Seems AM reception is bad here in the LA area in about the same time frame. Lot of weird noises and fading / booming on usually good stations. Where do you live? Might be sunspots?

Tony

Could be anything in your neighborhood, most electrical noise is AM..Also possible your receiver is the problem.
Sunspots and the solar cycle can also effect reception. When the cycle is low, KGO is like a local station here, when the cycle is high they don't exist.

After a disastrous attempt to introduce recorded spots about twelve years ago, WFMT in Chicago went back to its live copy-only policy and took advantage of their ownership by not-for-profit PBS station WTTW to begin a "Fine Arts Guild" funded by listeners that supposedly makes up for the funds they would've received from airing recorded spots and is used to broadcast drama and readings that ordinarily don't draw advertisers. Their pledge drives are much lower key than any public broadcasting pledge drive and seem to bring in more money per capita than public broadcasting pledge drives--a statement to how much 'FMT's core audience appreciates what they do, after over 50 years.

However, there are some things that have changed--in the old days superlatives were verboten (a Scandanavian furniture store spot had to call its sale a "Finn-tastic" sale for 'FMT to accept the copy) and phone numbers were only given once in a spot (since 'FMT listeners were considered intelligent enough to get the number the first time). Superlatives are now allowed and phone numbers are usually given twice in spots now.

1868. online antenna pattern plotter

Hello all -

I found a neat site that has an online antenna pattern plotter.
The site claims that they have a catalog of over 3300 antennas
patterns from various manufacturers. The site also claims that they
will upload any antenna patterns mailed to them that are not in their
catalog (might be worth looking into). I tried the site and it seemed
pretty nifty. Anyhow, here's the link : www.antennapatterns.com

The "Radi Crazy" is back again!

Still seeking investors to help us acquire fulltime class "C" (formerly called Class IV/graveyard/local, silly!)AM in Guthrie, Oklahoma. 1490 Khz, 1 KW.

Total consideration: $85,000 with $20,000 down. Seller financing with 3 year payout at 7 percent. This is the only station in the community. On the air since 1955. "Dark" since August, 4, 2001.

NO real estate included. No studio gear either. Sale DOES include: Tower, ground system and transmitter as well as goodwill and FCC license.

Callsign: KOKC but we will be expected to apply for new callsign. The owners want that callsign. Don't ask!

Active or inactive investors with at least $5,000 are welcome. We don't have to beg. We have one $55,000 investor now. All investors would be on the board with full voting right, if desired.

Tel: (478)741-1710.

73,

Meyer Gottesman, W6GIV
Macon, GA

OK Mr. Anonymous, here's your chance to prove your case and shut me up. You can pound your chest and have bragging rights to ending this thread for good. Where do your figures for XM being *ahead of* projections come from, that we can all go and see? If they're real figures, we should all be able to go to the source and see them and that would make me a liar and you would be the BIG WINNER and I would go away. As your buddy Tom likes to say, "put up or shut up"!

If you can't support your claim that XM is *ahead of* projections, with a confirmable source that everyone reading these posts can go and see for themselves, then you have exposed yourself for the fraud you are. If you can, I'll go away and never post on XM again. Put up or shut up! If I'm as stupid as you have implied, as ignorant as you claim, here's your chance to prove it and get it over with. Otherwise you go away and stop telling lies about me and misleading people. Can't wait to see your Mensa inspired response. Anything short of confirmable figures is public exposure to your fraudulent claims.

Time to give it up on XM, Russell has been right all along:::::SEC filing drags XM Satellite shares lower

By Reuters
March 19, 2002, 11:10 AM PT

Shares in satellite radio broadcaster XM Satellite Radio fell Tuesday after the company's auditor questioned XM's ability to continue as a going concern, but the company's chairman said it was confident in its ability to fund operations.
In an annual report filed with the U.S. Securities and Exchange Commission, XM said the latest report from its auditors, KPMG, said its need for additional debt or equity financing "raises substantial doubt about our ability to continue as a going concern."

However, XM Chairman Gary Parsons said KPMG has raised the "going concern" issue every quarter since the company has gone public.

"Accurately, that is the situation, but it has always been the situation since the company was founded," he said.

Parsons also said the company is "comfortable with its ability to continue to fund its business in the normal course."

XM shares were down $1.95, or 13 percent, at $13.05 in midafternoon Nasdaq trade. They were among the most active shares and the biggest percentage losers on the exchange.

XM, which provides 100 channels of digital radio, some of them commercial-free, launched its nationwide service last November, 4 years after its license was first awarded and 11 years after it first applied.

In late January, XM said it expected to have 350,000 subscribers by year's end and said it had enough cash to operate through the end of the year.

Hi. I've seen two types of transmitters i'm really interested in. One was a UK/US wall outlet tranmitter on UHF and another was VHF and was in the airband. The airband is about $70 as opposed to almost $300 of the UHF. Why's this? Also, what would be the range? Can any scanner pick it up? Any US VHF transmitters? Thanks

Dave

Possibly not the most appropriate newsgroup for this kind of question
but here's my 2p.

UHF around 400MHz and crystal controlled seem to offer about the best
overall performance of these type of micro transmitters.

Matching single or dual channel receivers are preferable over wide band
synthesised receivers or scanners due to a superior signal to noise
ratio. The antenna on both ends is of course another very important
factor. Expect >500m about the max.

Yes, most scanners will pick up these bugs.

Now if you could find a spread spectrum or other digital bug together
with a matching receiver that would be interesting...

I live in Ohio on Lake Erie.
The noise is a squelching squalling sound.
It affects stations from 700 through 500
on the AM dial. The only thing I have done differently lately is added
another small air conditoner in other room.
I live on top 3rd floor of house. neighbors
only below me. Several ceiling fans
on 2nd and 1st floors.

[Moderator's Note: Where on Lake Erie? Here in the Cleveland area I
can't get anything I should be able to, but I figure that's due to electrical
interference with both of the car radios....]

That language is the standard wording for all start up businesses that have to use new capital to reach their goal of profitability. Amazon.com has one, nearly all the biomed companies that are in development but with no marketable of FDA approved product have them. It is a standard paragraph that means, "this is a company that is not yet profitable and will require additional capital to get to profitability if that ever occurs."

Two months after that audit report, XM floated an equity offering for $200 million that was 10% oversubscribed; they just filed for and got a $500 million dollar self offering. this gets them to around 2005 without needing any more capital.

What caused the XM shares to go down a bit was the general condition of the market and the dilution caused by the new stock offerings. Most people in the market are aware of these situations and were not the least bit concerned.

How about this (courtesy Yahoo Financial
http://biz.yahoo.com/twst/020423/pah460c.html) :

"TWST: James, will you bring us up to date on the status of satellite radio
and Internet radio? What's happening in that space?

Mr. Marsh: To start from the beginning, basically what has happened is that
the two satellite radio operators are now poised to launch national service.
XM Radio (Nasdaq:XMSR - news) is up and running. I believe they launched
nationally in the middle of November, and they have been tracking well. I
think they preannounced 76,000 subs for the end of the first quarter, so
they're clearly growing more rapidly than most people anticipated.

I think the big transition for the satellite radio industry will be when they move from selling radios primarily through the aftermarket channel to the OEM channel. Maybe I should take a step back first and explain what I mean. There are roughly 25 million to 28 million car radios sold every year. About 11 million of those are sold in what we call the aftermarket. That would be an individual walking into, let's say, a Circuit City, buying a radio and installing it in his or her car.

So on annual basis we see about 25-27 million potential radio sales where satellite radio will have the opportunity to sell their service. Right now, when we do our channel checks, we're hearing that 10% to 15% of new radios sold are satellite radios. That's ahead of our current aftermarket expectations, which are about 3% for the full year. So things seem to be tracking ahead of our expectations there, although I should mention that it's still very early. I think the aftermarket channel success doesn't demonstrate, in and of itself, that this will be a mass-market service. It basically demonstrates that early adopters are willing to go in to Circuit City and go through the hassle of buying a satellite radio and having it installed in their cars."

I am sure that you will say that it is not good enough.

Tom

1883. Measuring Antenna Power?

Newsgroup: rec.radio.broadcasting

Amateur Radio Newsline™ Report 1294 - May 31 2002

Amateur Radio Newsline report number 1294 with a release date of Friday, May 31st 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. An airline pilot playing pirate radio operator finally gets caught and a tank you from the FCC to those who solved an R-F-I case. These stories are first on Amateur Radio Newsline report number 1294 coming your way right now.

(Billboard Cart Here)

**

ENFORCEMENT: AIRBORNE UNLICENSED STATION BUSTED

Hams down-under have busted an unlicensed operator who was not only on the air, but also in the air. Rick Wornett, P29KFS, reports from Port Morsby:

--

For many years a non-qualified person has used the callsign P29VS from locations all over Australia. When you find this unlicensed operation extending to aeronautical mobile mode and being used all over Australia, even the most un-informed amateur must start to ask questions.

But no. For years this pirate operation has gone un-reported by VK amateurs, many of whom talked daily with P29VS at either a fixed location in Victoria or aeromobile from various jet routes across Australia. None of these licensed amateurs, supposedly aware of the terms of their license and the limitations of operating with a foreign call, ever queried the use of a P29 call in Australia.

In view of his long and un-challenged operating history, it is only fitting that the pirate should be closed down by P29 amateurs monitoring, providing evidence and insisting that something be done by your ACA.

First heard some years ago while mobile over Western Australia, the callsign was monitored recently and consistently on Tony's net on 14mHz. The P29 radio society queried PNG's administration and was informed that the call had never been issued. In fact this had been determined long ago when an attempt was made to have a PNG license issued. Further work including recordings of callsigns and place names identified the operation as being within Australia. Action taken by the ACA in Victoria has now terminated the operation.

For Amateur Radio Newsline, I'm P29KFS Rick Warnett, IARU chairman P29.
--

The airline that the unlicensed operator works for was not revealed. (Q-News)

**

ENFORCEMENT: A BIG THANK YOU FROM THE FCC

Back on this side of the Pacific, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth is saying thanks to some ham radio operators, some corporations and the ARRL. He says that they all worked together to solve a long standing interference issue in the Cincinnati Ohio area:

--
AUDIO REPORT ONLY: Hear it by downmloadingf the MP3 version at www.arnewsline.org.
--

Hollingsworth says that this was a very complex case and that everyone worked very diligently to resolve it.

**

RADIO RULES: FCC WILL HEAR PETITION FOR REVIEW ON CC&R”S

Lee McVey, W6EM, tells Amateur Radio Newsline that the FCC has decided to consider his Petition for Review of the Dismissal of the ARRL Application for Review of RM-8763 which he filed in January. The Bradenton, Florida ham says that this will offer the Commission to take another look at the CC&R issue now that preemption has also been extended to two-way Internet services. This, because many such services cannot function effectively without an outside antenna.

McVey says that although the regulations only permit opposition comments on his Petition, he would appreciate receiving any and all replies to opposition comments. Send them by e-mail to lee.mcvey@prodigy.net. More information is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-222345A1.doc

(5 sec pause here)

**

RESCUE RADIO: HAMS ON THE FIRE LINES IN NEW MEXICO

Ham radio has been aiding with communications as a wildfire -- dubbed the Borrego fire -- races across the New Mexico highlands. According to Amateur Radio Newsline’s Jay Miller, WA5WHN, in Albuquerque, the 145.19 repeater atop Pajarito Mountain played a key role during evacuations of the towns of Cordova and Truchas. This is the very same repeater used during the fire in Los Alamos.

Jay reports that at one time over 40 members of New Mexico Search & Rescue has been placed on standby for this fire. Almost all are hams with equipped with mobile High Frequency, VHF and UHF voice as well as A-P-R-S capabilities.

Bill Kauffman, W5YEJ, was is the New Mexico Emergency Coordinator. He has been on the 145.19 MHz repeater assisting in communications and logistics. Meantime, Lonnie Scott, AH2AZ, from Santa Fe coordinated efforts at the Emergency Operations Center that was opened in the town of Espanola with Dave Clark, KJ5KG, and Terry Morton, N5XDF, at the Chimayo Elementary School. The evacuation order for Truchas was finally lifted on Thursday May 23rd. (WA5WHN)

**

RESCUE RADIO: ARRL ATLANTIC DIVISION NAMES AWARD WINNERS

Hams from three ARRL Divisions will be honored for their volunteerism following the September 11th 2001 terrorist attacks in New York City and Washington D.C.

According to the ARRL Letter the 2002 Atlantic Division Amateur of the Year Award will be jointly presented to the amateurs of the Maryland-District of Columbia Section, the Western Pennsylvania Section and the ARRL Hudson Division. All three activated their emergency communications systems immediately following the attacks. The Pennsylvania group handled communications where a jet that was highjacked crashed when passengers decided to act against the terrorists.

The Atlantic Division awards committee has also named Bob Arnold, N2JEU, to be recipient of it’s Technical Achievement Award. As previously reported here on Amateur Radio Newsline, Bob Arnold operates the "N2JEU's Web Controlled Shortwave Receivers" from its home in cyberspace at www.ralabs.com/webradio. (ARRL Letter)

**

RADIO RULES: VEC’S TO MEET – YOUR INPUT WANTED

John Creel WB3GXW tells Amateur Radio Newsline that the annual conference of the nations Volunteer Examination Coordinators is scheduled for July 26th in Gettysburg Pennsylvania. This is the annual gathering where the majority of the VEC’ meet with the FCC to discuss the all volunteer testing system and the way it can be improved. (WB3GXW)

**

CONVENTIONS: DAYTON AND THE APRS GANG

APRS was a big hit at the recent Dayton Hamvention and the man who made the mode happen was there to talk about it. A-P-R-S developer Bob Bruninga, WB4APR, talked with Amateur News Weekly’s Jack Parker, W8ISH:

--

The APRS booths at the Dayton Hamvention were always crowded with amateurs seeking new information on the fast growing automatic position reporting system. Bob Bruninga-WB4APR has been refining the technology for more than a

decade. With public service in mind Bruninga says DTMF tones can be used to further expand the APRS system.

Bruninga: “What we are introducing this year is APRs using touch tones. So you can do that with any walkie talkie. So show up at your event and want to report that you are at mile 13 in the marathon you enter a couple of digits and 13 and that tells everybody. The computer will receive and convert that to an APRS position report showing you at mile marker 13.”

At special events, voice nets often become busy. APRS can relieve congestion.

Bruninga: “We hope by having the touch tone capability that everyone out there can enter data. And that keeps traffic off the voice net which could be handled with a couple of key presses.”

Bruninga has the DOS version ready to go. He’s now looking for help on other versions.

Bruninga: “I am writing it in DOS to show people what it can do and am encouraging anybody to write it for a soundcard software because then it’s totally software.”

Newly developed software and the growing popularity of APRS style radios are helping to expand the automatic position reporting system. Bruninga says the marriage of aprs digipeaters and the Internet make it a global communications and information system.

Bruninga: “So, really what aprs is these days is a world wide packet distribution system for real time communications.”

Reporting from the 2002 Dayton Hamvention, this is Jack Parker, W8ISH.

--

More on Hamvention 2002 in future Amateur Radio Newsline reports. (ANW)

**

HANDI HAMS: NEW PROMOTIONAL TAPE AVAILABLE

The Courage Hamdi Ham System says that it now has a ham radio tape available to blind members who want to promote amateur radio in the blind community. The presentation covers the basics of what ham radio is and why it is a fun and useful activity. The tape is free to Handi Ham members for the asking. For more information contact Handi Ham director Pat Tice by e-mail to wa0tda@arrl.net. To get on the text-only Handi Ham Newsletter distribution list send and e-mail to handiham-request@cs.vassar.edu. In the subject line simply put the word “subscribe.” (Handi Hams)

**

RADIO RULES: PART 15 AMENDED TO PROMOTE THE DEVELOPMENT OF HIGH SPEED WIRELESS DEVICES

Turning to regulatory matters, the FCC has amended its rules to promote new digital transmission technologies for high-speed wireless communications. Specifically, the Commission has modified Part 15 of its rules to permit new digital transmission technologies to operate in the 902 to 928 MHz, 2400 to 2483.5 MHz and 5725 to 5850 MHz bands.

(DO NOT READ: The complete document is on the FCC website at fcc.gov/edocs_public/attachmatch/DOC-222567A1.doc (Tnx CGC Communicator))

**

RADIO RULES: TV "CARS BAND" TO BE SHARED

The FCC has also adopted a Report and Order that has expanded the eligibility for licenses in the Cable Television Relay or CARS service to all Multichannel Video Programming Distributors. Now, Private Cable Operators, Direct Broadcast Satellite Operators, Open Video Systems, and others who provide multiple channels of video programming can join Cable Television Systems and Wireless Cable Systems in using CARS microwave frequencies to support their video programming distribution needs. This one can be found at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-222569A1.doc (CGC Communicator)

**

BREAK 2

>From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

SCIENCE NEWS: PERIODIC EARTHQUAKES DETECTED BY RADIO GPS

Turning to the radio science page. Were you aware that once every 14 months or so, portions of coastal British Columbia and northwestern Washington State experience an ultra-slow ground motion? Or, that if released all at once, this motion would generate an earthquake measuring more than 6 on the Richter scale?

Well that's what data from a network of G-P-S equipment spanning the region show, say scientists who presented their findings in the April meeting of the Seismological Society of America, held in Victoria, British Columbia.
Thankfully, these "silent earthquakes" are so slow that no one notices them, and no structural damage occurs.
More information is on the web at http://www.sciencenews.org/20020427/fob4ref.asp (CGC Communicator)

**

SPACE AND SCIENCE: AQUASAT LAUNCHED

NASA's Aqua spacecraft, which will orbit the Earth for six years and use a JPL-managed package to collect water cycle data has been launched from Vanderberg Air Force Base in California. The 6,248-pound spacecraft was lifted into space on board a Boeing Delta II rocket. The satellite is equipped with

JPL's Atmospheric Infrared Sounder instrument and will provide scientists with information on changes in ocean circulation, global precipitation and how clouds and surface water processes affect the Earth's climate. (ANS)

**

INTERNATIONAL-UK: HAM RADIO WILL HELP CELEBRATE QUEEN ELIZABETH’S GOLDEN JUBILEE

United Kingdom Amateur Radio operators will help to celebrate Queen Elizabeth's golden jubilee. Jeramy Boot, G4NJH, has more:

--
Commencing next Saturday the 1st of June, the Scarborough Special Events Group will be on the air for 30 days as GQ0OOO to commemorate the Queen's Golden Jubilee. Activity will be on all HF bands, two metres and 70 centimetres, using SSB, CW and PSK31. A special full-colour souvenir QSL will be issued to mark the occasion. Cards may be sent via the bureau or direct to club call G0OOO. Jeramy Boot, G4NJH

--

But that’s not all. According to the R-S-G-B, all U-K amateurs will be permitted to use the G-Q prefix " during the month of June to commemorate the Queen Elizabeth's accession to the royal throne. (GB2RS)

**

SPECIAL EVENT STATIONS: AM ON THE AIR FROM HAMCOM

If you are one of those hams who still gets a thrill when you hear full carrier A-M transmissions, listen up. This one is for you.

Bob Peters, K1J, reports that Chapter 207 of the Quarter Century Wireless Association is sponsoring an A-M special event station. This, at the HAMCOM convention in Arlington, Texas on June 7 and 8.

Peters says that station W-5-A will be located in the commercial exhibits area and will operate on 3.880 MHz and 7.290 daily from early morning until about 5 P-M both days. He says that anyone attending HAMCOM is welcome to drop by and operate. If you can’t but do make contact on the air, a joint Q-C-W-A and HAMCOM QSL will be available for an S-A-S-E. Follow the Q-S-L directions given on the air.

Again that’s station W-5-A on A-M from the Arlington Convention Center June 7 and 8. (QCWA)

**

ON THE AIR: VHF/UHF REPEATER QSO PARTY

Bob McHugh, N4BM, says that the Wichita Amateur Radio Club in Kansas is trying something new. At least new to the United States. It is an operating event in the form of a VHF and UHF Repeater QSO Party which has already met with great success down-under.

According to McHugh, the rationale behind the repeater QSO Party is to get newer hams and more experienced hams on the air at the same time and in the same place. This, to exchange ideas and operation techniques.

McHugh sent along a copy of the rules for the event. We have no way to list them here but if this idea interests you, contact him by e-mail to n4bm@arrl.net (N4BM)

**

DX

In D-X, VK8HA says that the war in Afghanistan may have removed an irritant from the air. According to Henry, when the first bunkerbuster bombs were dropped near Kabul, a rather strong signal on 14.180 appears to have been blown off the air. And V-U-2-U-R adds that that a broadcast station on 7.085 MHz also went off the air at the same time. This leads to speculation that the two transmitters were at the same location.

A lot higher in frequency, there is a new 432.300 Mhz CW beacon now in operation near Sausalito, California. It signs the call K-6-E-R and runs 2 watts into a horizontally polarized antenna. The K-6-E-R Beacon is located in grid square C-M 87 at 1125 feet above sea level.

Lastly, word that G-4-H-C-L who was due to travel to Yemen, on Wednesday the 22nd of May, has postponed his trip. This, due to illness in his family. G-B-2-R-S reports that he was slated to operate from Yemen as 7-O-1-C-L. (From various DX sources)

**

THAT FINAL ITEM: HAM RADIO LICENSING IN ZL

And finally this week, we take another look at the new simplified path to becoming a ham radio operator in New Zealand. We take another look through the eyes of Q-News Graham Kemp, V-K-4-B-B:

--

In ZL from October 2001 there were only two grades of amateur radio licence, Limited and General. In the early 1990's, the New Zealand administration devolved the examining and testing for the Amateur Radio Examination to NZART, the New Zealand Association of Radio Transmitters (Inc.)

The examination paper has 60 multiple-choice questions taken from a 600-question public-domain question-bank. Seventy of the 600 questions are devoted to the Radio Regulations, twenty to the Frequency bands and ten to the Q-code. The remaining five hundred are about electronics, radio communications and operating. The results are given before the candidate leaves the examination site.

--

Kind of sounds a bit like the way we in the United States have been testing candidates since the introduction of the all volunteer testing scheme, well over a decade ago. (Q-News)

Hi Dave,

I'd go with a FM kit you can get from Radio Shack or some such store. (I suggest U-Do-It Electronics in Needham Mass if you can't find any locally)

I've built the small "spy" version as a warm up to getting back into doing some board work on larger stuff. It gets good range. Maybe up to 1000 yards...I still havn't tested it with large antenna. And as in anything transmitted, if you can send it someone else can recieve it, so don't expect any privacy.

I have a dashboard FM tranciever for CD adapter, we got married two sundays ago, I attached it to the PA head and got FM transmission over teh section of the peninsula where we were. my family is notoriously late and I wanted to give them something to home in on....unfortunately i was so busy i never got to hook up the remote mike reciever for the video camera (remote sound via FM) nor was i able to confirm distance of signal.....

I have a VHS transmitter for my patio, every now and then truckers come across the same frequency....I hope they enjoy the music i'm playing....:)

As for the spying angle.....why you want to do that? generally spying is uncool, is there a story behind this? Perhaps different "narrowcast" solutions could help?

What are you trying to determine? ANSI exposure levels? Excessive (beyond license parameter) power?

A spectrum analyzer examines the relative levels of spectral energy at specific frequencies in real time but does not determine absolute field intensity. For that you need either a field intensity meter (e.g. Potomac Instruments FIM-71) or an RF exposure meter such as a Gauss or Holaday.

Variable-speed ceiling fans probably use SCR controllers - VERY likely
to make a terrible racket on AM.

Amateur Radio Newsline™ Report 1295 - June 7 2002

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone.

Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. Free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

The Newsline Production Team

==========

Amateur Radio Newsline report number 1295 with a release date of Friday, June 7th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Kids Day is coming and a legend leaves Top Band. These stories are first on Amateur Radio Newsline report number 1295 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: KIDS DAY COMING JUNE 15TH

It’s possibly one of the two mot important ham radio days of the year, and its only a week away. We are talking about the second of two Kids Day operating events held every year. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the story of the event and the man who made it happen:

--

The next Kids Day is June 15 from 1800 to 2400 UTC. Thats Saturday here in the United States. Most of the activity is on 20, 15 and 10 meters, but you can also put kids on the air on your local repeater if you wish.

Kids Day is not a contest. In fact, it is a non structured event where all you have to do is to call C-Q Kids Day, and then put the youngsters visiting you on

the air to talk with other kids visiting other hams. Once the children are talking,the suggested contact exchange might include the youngsters names, their ages, their location and -- for the younger ones -- favorite color. Best of all you can work the same station over and over again if the operator continues to change.

If this all sounds like a great way to spend a day, you might be interested in learning ewhere Kids Day came from. In reality is the story of vision by one man. A man who long before most relized a problem even existed.

It was Larry “Tree” Tyree, N6TR, who recognized that ham radio had no future without a steady influx of new, young hams. Kid hams filled with the wonderment of childhood. That thirst we are all born with to “learn.” To “experiment.” To find out how this or that “really works.”

But Tree Tyree did not just sit there and say let somebody do something. Working woith Oregon’s Boaring Amateur Radio Club, he went out and did it himself. And in creating Kids Day, N-6-T-R, probably established the most important “ham radio holiday” that we have.

“Kids Day.” Just think what it really means. It two days every year where we “grown-up” hams open our hearts, minds and stations to the young. We invite them in. We put them before a mic or key. We put them on the air to experience first hand the “magic” of radio. Then we silently pray they some of them will knock on the door again and say: “...can we talk on the radio again?” When that happens, we know that ham radio’s survival is insured for yet another generation.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

The first Kid's Day event was held on December 2, 1994 but it was, N6TR, who took “Kids Day” from a dream to a twice yearly reality now sponsored by the A-R-R-L. And in doing so Larry “Tree” Tyree N6TR figuratively “paid the premium” on the life insurance policy that is Amateur Radio. (ARRL, ARNewsline™, W6AQ)

**

RESCUE RADIO: NEW MEXICO WILDFIRE EMERGENCY FOLLOW-UP

More this week on the role that Amateur Radio operators in New Mexico played as a wildfires raged in that state. As reported last week, hams were called out as soon as the fire emergency was declared. Now, the ARRL Letter provides some in depth follow-up.

The Letter says that on May 23rd, an incident command post was set up in the town of Espanola in response to a so-called "sleeper fire.” This is a lightning-caused fire that smolders before bursting into flame.

This one erupted near the village of Truchas in north-central New Mexico. Over the Memorial Day weekend, more than 250 residents were evacuated from their homes in Truchas and the nearby village of Cordoba.

Rio Arriba County Emergency Communications Manager Lonie Scott, AH2AZ, activated amateur communications support. Amateurs were dispatched to Red Cross shelters set up at two elementary schools in Chimayo, and The Los Alamos Amateur Radio Club's W5PDO system provided support.

By late on May 24, the wind had shifted. The fire was burning away from Truchas. Residents were able to return home starting at 9 AM the next day. New Mexico Section Emergency Coordinator Bill Kauffman, W5YEJ said the incident command post and the shelters closed later that day after all evacuees had returned home.

As of May 29th the fire was still burning in the Pecos Wilderness area of the Santa Fe National Forest, but was not considered a threat to any homes or structures. But as tinder-dry conditions persist across the South-West, amateurs remain on alert in case more wildfires break out. (ARRL)

**

ENFORCEMENT: PIRATE BROADCASTER BUSTED IN PUERTO RICO

Turning to the regulatory arena, the Federal Communications Commission has announced that an investigation by the it’s Enforcement Bureau has led to the seizure of unlicensed broadcast radio equipment allegedly operated by Amil Lugo-González.

The station had been operating on 99.5 MHz from Jayuya, Puerto Rico. The FCC San Juan Office, working in conjunction with the United States Marshals Service and the Office of the United States Attorney for the District of Puerto Rico, seized the equipment on May 21st. The FCC says that on more than one occasion it had issued notices to Lugo-González directing him to cease operation of the unlicensed station. (FCC)

**

ENFORCEMENT: SHORT TERM RENEWALS GRANTED

Meanwhile, two radio amateurs have been given short term renewals of their Amateur Radio licenses. The FCC’s Riley Hollingsworth tells us who they are and the reason each is getting a shortened license term:

--
Hollingsworth: : “A short term of an upgrade to Extra class was given by the Wireless Bureau to Sam Jacobs, K3SAM. The grant was short term due to previous problems involving the filing of a club call sign application.

And, a short term renewal was given to Peter Figuroa, N6IWH, of Berkeley California. Figuroa had been on the Amateur Bands after theexpiration of his license but there were some extenuating circumstances.”

--

In both instances, two year license renewals were granted. If there are no other enforcement issues with either Jacobs or Figuroa over the next two years, each can apply for a full 10 year license renewal in 2004. (FCC, RAIN)

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the AF4CY repeater serving Madison Virginia.

(5 sec pause here)

**

CHANGING OF THE GUARD: THE 160 METER GATEWAY NET GOES QRT

A longtime fixture on Top Band has gone silent. This as Vern Jackson, WA0RCR, announces that he has terminated operation of his famed 160 meter Gateway Net. Here is the announcement as Jackson himself made it:

--
AUDIO ONLY REPORT: HEAR IT AT WWW.ARNEWSLINE.ORG
--

Over the almost quarter of a century that it existed, Jackson's net presented some of the top news and information sources in ham radio. This includes Hap Holly's Radio Amateur Information Network and Amateur Radio Newsline, all in high fidelity A-M. (WA0RCR)

**

THE VEC SYSTEM: NEW TECHNICIAN SYLLABUS RELEASED

The Question Pool Committee of the National Conference of Volunteer Examination Coordinators has released the revised Technician Class Element 2 Syllabus into the public domain. This syllabus will be used to develop the new question pool for Technician Examinations going into service on July 1st, 2003. All amateurs are encouraged to submit candidate questions to the Question Pool Committee by this coming September 15th.

Now before you sit down to dream up new questions there are some strict guidelines that must be followed. All proposed questions must be no more than 210 characters in length. This includes all spaces and punctuation. All answers and distracters no more than 140 characters including spaces and punctuation and you must identify both the syllabus area and the correct answer. Also, if the question is rule based, identify the exact reference in the Part 97 Amateur Service rules.

Candidate questions should be sent via e-mail to QPC@arrl.org. The complete syllabus will be posted to the ARRL website within the next few days. (W4WW, NCVEC)

**

REGULATORY: JOINT U.S.- MEXICO COMMISSION MEETING CONCLUDED

Call it radio regulation on an international level. This with an announcement that the FCC's Enforcement Bureau recently took part in the 26th formal meeting of a regulatory body known as the Joint United States and Mexican Commission.

The Joint Commission, formerly known as the Mixed Commission is made up of representatives from the United States and Mexico.
The latest meeting took place in Mexico City during the week of April 22nd. During the gathering the group reviewed 115 cases of harmful radio interference in the United States and Mexican border zone. Of these, 47 were officially closed. A report is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-02-1063A1.doc (CGC Communicator)

**

REGULATORY NEWS: FDA WEB AGE ON RADIO FREQUENCY HAZARD FROM CELL PHONES

The Food and Drug Administration and the Federal Communications Commission have established a joint web page called "Cell Phone Facts." This, in an effort to provide reasoned answers to the public's never ending health and safety questions concerning the radio frequency power produced by portable cellular and PCS phones, and their base stations. The site is in cyberspace at www.fda.gov/cellphones (FDA, FCC)

**

CONFERENCES: ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE

Technical papers are solicited for presentation at the 21st Annual ARRL and TAPR Digital Communications Conference. The event will be held September 13th to the 15th in Denver, Colorado.

The annual conference proceedings are published by the ARRL. Presentation at the conference is not required for publication. Submission of papers is due by August 5th. Conference registration details and updates, along with more information are in cyberspace available at www.tapr.org/dcc (TAPR, ARRL, ANS)

**

HONORS: CQ MAGAZINE ADDS TO HALLS OF FAME

Forty-four new members have been added to the CQ Amateur Radio Hall of Fame, while the CQ Contest Hall of Fame and the CQ DX Hall of Fame each grew by one member. This, with OZ1LO being honored by his fellow contesters and W0AR being recognized for his accomplishments in DX’ing. The announcements were made at the recent Dayton Hamvention. A complete list of winners is in cyberspace at www.cq-amateur-radio.com in the “announcements” area. (CQ)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EMERGING TECHNOLOGY: THE NEW E-MAC

Apple Computer has unveiled a new line of computers exclusively for educators and students. Apple says the new e-Mac will feature 17-inch monitors and high speed G4 processors. The e Mac is slightly smaller than the iMac and includes stereo speakers and a CD-recordable drive. The price for the new e-Mac machines will begin at 999 dollars. (Appple press release)

**

HAM RADIO IN SPACE: BOY BAND MEMBER MAY NOT MAKE IT TO SPACE

Possible problems for a boy-band member who wants to fly in space. The latest news reports quote the Russian Space Agency as saying it has no contract in hand to carry 'N Sync's Lance Bass to the International Space Station.

As previously reported here on Amateur Radio Newsline, Bass has made public his wish to visit the I-S-S. He has already made a trip to Russia to undergo medical tests in preparation for a seat on an upcoming flight.

As of airtime, its not known if Bass has been approached regarding his getting an Amateur Radio license and taking to the ham radio airwaves if he does get to make the trip. (Published reports)

**

INTERNATIONAL – CANADA: NEW RAC CANADA DAY CONTEST MANAGER

Radio Amateurs of Canada Contest Manager Joe Mac Pherson, VE1CH, has announced that the Moncton Seniors Amateur Radio Club has taken over responsibility for the management of the R-A-C Canada Day contest. This, effective immediately. Mac Pherson says that all inquiries or electronic logs related to the R-A-C Canada Day Contest should be directed to ve9qed@rac.ca. Non-electronic logs, for the RAC Canada Day contest should be mailed to the Moncton Seniors Amateur Radio Club at Post Office Box 73, Moncton, New Brunswick, Canada. The postal code is E1C 8R9.

**

INTERNATIONAL - GIBRALTER: RESTRUCTURING AND A NRE LICENSE CLASS

License restructuring is coming to Gibralter. Peter Naish, VK2BPN in Australia has been advised by Wilfred Guerrero that Gibraltar will be introducing the New Foundation Licence by mid-June. Guerrero, who is the Secretary of Gibralter Amateur Radio Society says that the new llicense will be similar to the highly successful Foundation License recently put in place in the United Kingdom. The prefix to be used will be ZB3. (Q-News)

**

DX

The 6 meter D-X season seems to be here. Jay Kesterson, K0GU in Colorado reports over the VHF Reflector on some very early season E skip openings to Europe. Jay notes that on June 4th at 15:14 UTC he heard the EN19 beacon. He then checked for European video signals and was surprised to hear many of them on and near 49.750 MHz. Jay says that some were S 9 plus 20 d-b. He then worked SM3UZS at 15:50 U-T-C followed by OH7PI at 16:45. (VHF Reflector)

Still with 6 meter D-X news, word that St. Paul Island should be on the air late June 29th through July 9th. According to Herb Spoonts, W3IWU, the operation will feature a full time, dedicated six meter station operated by W7XU, N0QJM, W0SD and W0OE. Herb says that the six meter station will only transmit on 50.157 MHz listening up 5 kHz and more when needed. Liaison will be on 28.885 MHz and updates will be provided to the appropriate Six Meter Internet sites and reflectors. St. Paul Island holds the prefix CY and is located in Grid Square will be FN97. QSL via W7XU. (Via E-Mail)

On the High Frequency bands, GB2RS reports that JH0IEW/JD1 and JE0EHE/JD1 will be active from Ogasawara Island through the 16th of June. They will be operating on 80 through six meters, including the WARC bands on SSB and CW. QSL to home calls or via the bureau. (GB2RS)

Also, keep an ear open for W5AA slash TI8 from Costa Rica until the 17th of June. He will operate on all bands with an emphasis on 30, 12 and 17 meters. QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: ATOMIC COFFEE MAKER

And finally this week, if you are a ham who has trouble waking up to keep those wee hours D-X schedules, the answer may be as close as the local appliance store. How about an atomic time coffee maker?

No, we aren’t kidding. We discovered this one last week in an appliance store in the Ft. Lauderdale Florida area. It’s called the Perfect Time Coffeemaker, and according to its manufacturer Melitta Salton Inc, it’s the first such device using radio frequency reception of atomic clock signals to keep it in sync with the National Bureau of Standards time keeping system.

Melitta Salton claims that the internal clock provides accurate time right out of the box by monitoring the WWVB broadcasts from Boulder Colorado. All the user need do is to select his or her time zone and the coffeemaker does the rest. It even automatically adjusts to Daylight Savings Time and its internal back-up batteries keep it going during short duration power losses. Salton also says that it also brews good coffee. And what more could any D-X hound ever ask for. (ARNewsline/4)

Hey you might want to read these things before posting them:

The shares (XM) are down about 47 percent for the year, compared to a drop of more than 60 percent for its only competitor, Sirius Satellite Radio Inc. (nasdaq: SIRI - news - people)

That is exactly what I've been saying and what you and your anonymous buddy have said was "lies and misleading" on my part.

Again, thank you for making my case. By the way, what was the NAME of that analyst?

You're funny guys - Funny guys!

Easy. To make $$$.

Stations are scared to death of tune out and they assume that anything that's not safe - Unchained Melody, Knock On Wood, Jumpin' Jack Flash are all safe - or unfamiliar, will cause the dreaded tune out.

KRTH is boring because it plays only the safest of safe music, no chances taken there, making it unlistenable to me - but if you programmed to my taste, you'd lose money super-quick, so's can't say that I blame them. No one in radio (major or large market) is brave enough to take real chances in programming, especially with music.

Steve

That's pretty thin evidence. It has been forty years since I stayed in Norfolk, but as I recall it is a fairly good-sized city, with a substantial suburb contingent. It is certainly not stretching the limits of credibility to think that there might actually be two readers of r.r.b in the Chesapeake Bay Area and that they might agree on a controversial topic.

Let me warn you in advance that at least a dozen or so people read and post news to my private server...and to my knowledge, they all are r.r.b readers. If and when one or more of them post regarding a topic to which I have responded, I certainly hope you will count to ten before accusing me of having "sock puppets". (Someone actually made such an accusation in another newsgroup. Not only was the poster a true separate entity, but he was posting from a continent away, in South Carolina.)

And the stock is up over 100% since its September low. In case you have not noticed, the whole market is at its lowest point since the reopening following 9/11. Grupo Radio Centro, a traditional terrestrial broadcaster, is off over 60% from November. Hispanic Broadcasting Corp is off 28% in the last 90 days. It is a Bear Market.

Steve, generally I would agree with you on this, but in this particular case it is quite apparent that Russell is using atleast one Sock Puppet. This is a moderated group and as such shoule be free from the continuing flames that he posts. He has ruined threads in this group, and in alt.radio.digital, and rec.radio.shortwave whenever the subject of XM radio comes up.

I don't think you should kill the thread, I just think that some of the individual posts should be closely scrutinized before being allowed. I don't envy you your job though.

You and I disagree on this. Jeri posted in another group that she had phoned XM and was put through to my voice mail. She has and some others have repeated this story several times. The fact is that I do not work for XM and never have. She seems to follow the "Russell Todd" and "Radio Bob" line of posting very closely.

I could be wrong.

Can we discontinue this thread now?

I recently took a ride down near the site for the tower (recently knocked down by a small plane, and was surprised to not see any rebuild in progress (at least anything visible from the road). I've also noticed that their web site seems somewhat "frozen in time".

Are there plans to rebuild on this site?

This is a very tardy followup, but I believe I have the answer to a question herein:

Jim Hilliker <jimhilliker@hotmail.com> had written:
| I see that a year or so ago, there were some questions about what
| became of
| KPPC-AM, on 1240 kHz., the little station that served Pasadena for
| only two days a week for many years.
|
| The station went dark with the last broadcast in September 1996. The
| FCC deleted the license in July of 1997, at the request of the
| licensee.

<...>
|
| But, the end came in September of 1996, still trying to find exact
| last day of broadacst, anybody know?

The following are from a mailing list in 1996 -- email addresses have been redacted (spam was just beginning to become a problem then):

From: 12345@nospam.com (Mike Callaghan)
Subject: KPPC's Last Broadcast
Date: Sat, 20 Apr 1996 15:49:32 GMT

The lowest power commerciallly licensed AM station in the U.S. broadcast for the last tine Friday night. [April 19] KPPC-AM, 1240 lHz. in Pasadena, CA., is being shut down so that KGFJ, 1230 kHz., in Los Angeles, won't have to put up with reducing power during the 22-1/2 hours a week that the Pasadena station was on the air. In an arrangement struck decades ago, KGFJ would have to drop from 1000 watts to 100 watts during the hour KPPC was on the air. This was a royal pain to the owners and listeners of KGFJ, and the only reason this happened was that KPPC was there first. KPPC signed on the air in 1924, and ran for 73+ years until last night.

A farewell program aired the last 4 hours, featuring current chief nengineer and manager Mark Pompey. A number of former employees called in and went over their parts in the progression of KPPC, from the days when the Pasadena Presbyterian Church started it as a way to reach parts of the congregation. Then it was bought by the National Science Network, who had -no- idea what they were getting into with a bunch of hippee freaks broadcasting from the basement of a Christian Church, to the final dayu when it served the religious community again.

I'm sure Mark Pompey can add to this -- but for me - it was the demise of my very first station, the one that convinced me broadcasting was a worthwhile way to make a living, and the one that taught me how to deal with the parts of radio you'll never find in a book or classroom - the egos, the drugs, and unique people that call themseves broadcasters.

I'll miss it - and the impact of it's being gone hasn't fully hit me yet.

-- Mike

From: "Mark E. Pompey" <12345@nospam.edu>
Date: Tue, 23 Apr 1996 19:15:00 PDT
Subject: Re: KPPC's Last Broadcast

[...]

Just a couple of corrections to Mike's comments. KPPC has been operating during nighttime hours since around 1985. We increased our power to 250W at that time. In exchange for both of these items we lost ALL protection from the stations previously required to provide it.

As part of a join agreement presented to the FCC, KGFJ (1230 AM) and KPPC (1240 AM) were to be allowed to broadcast at 400W during nighttime and Sunday hours. KGIL (1260 - Now KJQI?) was no longer required to operate with a nighttime array during Sunday hours. And KDIG (1240 - Now KKLA-AM) was allowed to operate at 1000 W 24 hours a day. Keep in mind the geography here. KPPC was in Pasadena, KGFJ was in downtown LA (just a few minutes down the Pasadena FWY), KDIG was in San Bernandino (about 50 miles away).

KGFJ almost jeopardize this agreement. When the FCC changed the rules to allow Class IV stations to operate at 1000W at night, KGFJ tried to pull out of the agreement. KPPC countered with the restriction that they would still require KGFJ to power down to 100W during the 22 hours that KPPC was on the air. Plus pressure from the two other stations changed KGFJ's mind. A compromise was finally reached that allowed KPPC to get its nighttime hours at 250W, and KGFJ broadcast at night with 1000W.

KPPC's signal actually got worse after this moved. It even seemed like it got worse when they abandoned their old tube transmitter for a solid state Nautel. Our consultant later reminded me that because all of the other 1240's across the country were able to increase to 1000 and the elimination of the protection from local adjacent and co-channel stations, our fringe areas really suffered.

KPPC and its former sister station KMAX were my first stations. KMAX was sold in 1989 and recently changed to a AOR format. KPPC is scheduled to be shut down but the new owner are looking at the possibility of keeping it on until a new transmitter site can be found for KGFJ.

The last broadcast was a sad moment. The new owners had already
taken control of the station but they allowed us this one last broadcast.

For that I was very grateful. I was happy that we were able to get
a good turn out. We had 4 phone ins and about 20 people in studio.
That was great considering I could only give them a couple of days
notice. I taped the broadcast and have promised to give a copy to
the former owners. One of them is promising to submitted it to the
Museum of Broadcasting. :)

The excessive rent being charged by the Church (where the
transmitter is located now) is being weighed again the small
increased coverage area that KPPC would provide. Unfortunately,
that small coverage area is the Pasadena area (a rich area).

I need to add at this point that both stations applied for new call
letter pending ownership change. KGFJ's call letters have changed
to KYPA.

[snip]

[end of quotes]

I hope this helps answer the question of when KPPC ended: 4/19/1996.

This is a fairly common occurance in the summertime due to sun spots.
Stations on the low end of the VHF spectrum (ch. 2-6) are most likely to "skip"
like this.

I'd actually like to start my own talk show, have control of the discussions and who I let on, etc, with provocative topics that I enjoy discussing. If it became successful, I'd like to make it a pay broadcast. (maybe $1 an hour, something nominal like that) So it would be nice to be able to do it and control it from here, and have like a que of people who want to be on the air with me, that I could control, and some way of collecting the pay when I do that at some future time.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Where does the 94.5 come from? Some folks did a "Power 102" once on the web and some weaker minded folks in these parts were convinced that the long-time classical station at 102.1 had gone "dance". The webcasting only lasted a few weeks (interesting how they come and go in the blink of an eye), but to this day some are convinced that the real station actually changed its format during that brief period.

In essence, why do webcasters insist on maintaining the trappings of real, over-the-air radio stations?

BTW, I would give you a listen, but I'm not downloading bug-ridden BillWare to do it.

Was wondering how it is that a station in Belize has a callsign starting
with "K", which is assigned to the USA? "KREM"
Also why is it that most foriegn stations don't use or have
callletters?

There's a real lack of creativity. By not thinking outside the radio
box, you limit your ability to fully utilize the new medium.

It took at least 20 years for motion pictures to do things other than
film stageplays and vaudeville acts.

Full utilization of a new medium takes time. The people with the money
are usually afraid to try things they perceive to be "unproven."

>Also why is it that most foriegn stations don't use or have
>callletters?

I searched every database and could not find any station with call letters KREM.. In Belize or anywhere in the Caribbean or Central/South America.
But you're right about the K belonging to the USA. W, K and N are assigned to the US and it territories and possessions, so no other stations in the world can use them for a legal callsign.
It's possible that they are using it as an identity, but not their legal callsign.
For example: A station here in Indiana calls itself KORN Country. The jingles, liners, voiceovers and everything at that station bears the callsign
K O R N (spelled and spoken)... but they bury the legal ID between commercials in the :50 stopset, everything else is K O R N.
Almost all of Clear Channels CHR's are calling themselves KISS-FM, spelling out the callsign in jingles, but we all know there is only one station with the real callsign K I S S.
Maybe this is the case in your station in Belize.
As for the foreign stations that don't use callsigns, the requirement of giving legal ID's and assigning call letters is done country-by-country. Only the US and countries with broadcasting treaties agreeing to this are required to use call signs and do legal ID's at the top of the hour.
In fact, even in the USA there are zillions of stations who do not follow the legal procedure for giving Legal ID (the above example KORN is a good one: They bury the legal ID between commercials in the :50 stopset, then run a produced sweeper at the top-of-hour with a jingle singin' K O R N, Columbus). It is doesn't even come close to meeting the 'spirit of the law', yet nobody seems to care anymore. In fact, I would estimate that 20% of the stations in the USA don't follow the spirit of the law regarding legal station identifications, as many also follow the KORN example.
I know of one station in my area who's Digilink hardware went bonkers, and they played American Family Radio (a religious non-com) 24/7 without one legal ID for almost a month.
Maybe Krem means something special in spanish or some other language.

John Higdon <no-spam@no-spam.radiomonopoly.com> had written:
|
| Where does the 94.5 come from?

I presume it's the attempt to preserve the illusion of radio.
If Internet "radio" were such the hot medium its proponents claim
it to be, I would doubt if such measures would be necessary.

As it is, there are multiple data formats, you have to have the "right"
player and, in some cases, the "right" operating system, and the
whole thing is fussy and annoying to set up and run. Now if
there were a single standard for streaming audio with players
supported on multiple operating systems and platforms, it
might be a different matter.

As it is now, it's like the 33-1/3/45/78 rpm record changers of
days gone by except this time about fifteen different speeds are
needed along with the ability to convert among all the world's
voltage and line-frequency standards. Streaming audio is going to
be limited to a specialist audience until there's some standardization.

| Some folks did a "Power 102" once on the web
| and some weaker minded folks in these parts were convinced that the

Well, one person, who provides minutes of endless amusement on
ba.broadcast. The other weird thing is that the "call letters" that
were used belonged (and still belong) to a real, working FM station
in west-central Missouri.

Since Belize dows not license stations with call letters, they can "call"
themselves most anything. They probably think that the KREM name is
attractive and, of course, it has nothing to do with US licensed calls.

> Also why is it that most foriegn stations don't use or have
> callletters?

Actually, most Western Hemisphere countries give call letters to stations
but the stations very smartly know that names are more memorable and don't
use the calls on the air. There are stations I work for whose calls I don't
know because they may exist on some paper in a file, but they are never ever
used ont he air.

Back in the mid 70's in Toronto on AM we received a call from the Bahamas or Bermuda (can't remember), for some reason our station was louder in their control room than they were. All I can remember was a storm front was aimed from us to them but I doubt whether the weather had anything to do with it.

Part interest of fullrime AM radio station for sale.
Oklahoma. Near Okla. City. 1 KW. Non-directional.

Station is "dark" Sale includes tower, ground system,
transmitter, goodwill and last but not least, FCC
license.

No real estate and no studio geer. Get real! This is
going for $85,000 total with $20,000 down. Seller
financing with a three year payout at 7 percent.

Joint venture. Active or inactive investors with at
least $5,000 each are welcome. All investors would be
on the board with full voting rights if desired.

No "AM bashers" or "negative nabobs" PLEASE! This
station covers all of Okla. City in the daytime
according to FCC engineering documents.

Call (478) 741-1710 anytime in Macon, GA or email me
please.

73,

Meyer Gottesman, W6GIV

Winamp now support .ogg. Maybe you'd like to try using .ogg since it is a
better codec than mp3.

--
An unjust king asked a devotee what kind of worship is best? He replied:
'For thee the best is to sleep one half of the day so as not to injure the
people for a while.'

I saw a tyrant sleeping half the day.
I said: 'This confusion, if sleep removes it, so much the better;
But he whose sleep is better than his wakefulness
Is better dead than leading such a bad life.'

Amateur Radio Newsline™ Report 1296 - June 14 2002

Amateur Radio Newsline report number 1296 with a release date of Friday, June 14th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Venezuela says no to W-R-C 2003 and the international conference is looking for a new home. This story is first on Amateur Radio Newsline report number 1296 coming your way right now.

(Billboard Cart Here)

**
RADIO LAW: WRC-03 LOOKING FOR A NEW HOME

The venue of the next World Radiocommunications Conference has become uncertain. This, after Venezuela withdraws an invitation to the International Telecommunications Union to host the conference. Amateur Radio Newsline's Bill Pasternak, WA6ITF, tells us the impact this decision may have on Amateur Radio:
--
According to an ARRL Bulletin, the conference had been scheduled to be held in Caracas next June and July. Whether it can be held on the scheduled dates in some other location is not yet known. This is because the planning for a conference of this size and scope generally takes two or three years.

There are a number of issues of importance to hams are on the agenda. These include reaching agreement on separate allocations for Amateur Radio and broadcasting in the the 7 MHz band along with the possible revision of Article S-25 of the International Radio Regulations. Also to be taken under advisement is the issue of whether to retain the treaty requirement to demonstrate Morse code proficiency for access to amateur bands below 30 MHz.

But all of this may have to wait if the I-T-U cannot find a new host and find one quickly. And that could be a rather problematic at best.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.
--

The International Telecommunications Union did have an option on conference space in Geneva, but that expired before Venezuela decided to cancel. The Venezuelan National Commission of Telecommunications cited ongoing economic concerns for its decision to walk away from hosting the meeting. (Adapted from ARRL Bulletin)

RESCUE RADIO: THE COLORADO HAYMAN FIRE AND HAM RADIO

A 90,000 acre wildfire called Hayman -- the largest wildfire in Colorado's history -- is blazing just outside Denver. Firefighters, supported by many volunteers including ham radio communicators moved into position ahead of the flames Wednesday June 12th. They are setting backfires to try to block the fire's path toward the city's southwestern suburbs.

According to news reports, the Hayman fire was sparked by a campfire in the Pike National Forest southwest of Denver. It has been growing in intensity and slowly moving to the north-east. The blaze now covers close to 145 square miles. So far it has destroyed 21 homes and immediately threatens another 2,500.

Earlier, evacuations had been ordered in the town of Sedelia and in the Tarryall area in Park County. Tarryall is on the fire's northwestern edge. Colorado has also put out a call for additional fire-fighting crews from across the nation to be sent to the area. About 540 firefighters were working on the fires, and 800 more were requested.

Amateur Radio is playing a vital role in the overall fire control effort. According to Jay Miller, W-A-5-W-H-N in Albuquerque, quite a bit of support communications is taking place over the Mega Link repeater that interties the entire region. And health and welfare nets are operational on both 40 and 75 meter SSB in addition to VHF F-M. It is a very fluid situation and net frequencies vary with location and time of day. (WA5WHN, ARNewsline™)

**

RESCUE RADIO: THE COLORADO IRON MOUNTAIN FIRE FIRE AND HAM RADIO

The Hayman fire comes on the heels of last weeks Iron Mountain Fire. more than 1000 residents were evacuated near Canon City. At least 200 structures were destroyed. According to the ARRL, members of Fremont County ARES staffed a Red Cross shelter set up to serve the evacuated residents in nearby Cotopaxi. They also helped to staff the incident command post and the Deer Mountain Fire Station. Also, hams from Pikes Peak ARES staffed the Red Cross headquarters in Colorado
Springs. More on this story as news is made available. (Adapted from ARRL Bulletin)

**

ENFORCEMENT: TWO MORE PIRATE BUST

Two unlicensed broadcasters are are off the air and feeling the FCC's sting. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the details from New York:

--
In the first case the agency has issued a monetary forfeiture -- better known as a fine -- a forfeiture in the amount of $10,000 to Thomas A. Brothers of Detroit Michigan. Brothers was cited for willfully and repeatedly violating Section 301 of the Communications Act of 1934 involving operating an FM station on 88.3 MHz without a Commission license.

Also being ordered to pay $10,000 for operating an unlicensed broadcast station is the Revrend Doctor Phillius Nicholas of Brooklyn New York. Dr.

Nicholas is also acused of operating a station in the FM broadcast band without a license to do so. He too was found to have violated the same section of the Communications Act.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

Neither Brothers or Nicholas responded to initial Notices of Violation. Both have been given thirty days to pay the fines imposed by the FCC. (FCC)

(5 sec pause here)

**

THE WORLD: MISSIONARY KILLED IN THE PHILIPPINES WAS A HAM

Some sad news to report. A ham radio operator and missionary taken captive by Muslim extremists in the Philippines died during a rescue attempt on Friday June 7th.

Martin Burnham, KC0DNB, and his wife Gracia were among three Americans abducted by the Abu Sayyaf guerrillas in May of 2001 from a resort off Palawan island in the southwest Philippines. Martin Burnham was killed during the fire-fight to rescue them. Gracia Burnham suffered a would to her leg but was otherwise unharmed. A Filipino nurse held hostage by the same rebels was also killed during the rescue attempt.

The Abu Sayyaf rebels have been linked to Osama bin Laden's al-Qaeda terrorist network by United States intelligence sources. Four rebels were killed while Philippine troops suffered seven wounded. U.S. military advisors training Filipino troops in jungle warfare were not involved in the rescue attempt.

The Burnhams, from Rose Hills Kansas, were married for 19 years and had lived in the Philippines since 1986. Martin Burnham, KC0DNB, was a pilot for New Tribes Missions, flying other missionaries and supplies throughout the region.

(CQ, ARNewsline™)

**

ENFORCEMENT: FCC TELLS UTILITY TO CLEAN UP INTERFERENCE TO HAM RADIO

Yet another utility company has been told by the FCC to solve an interference problem to a local ham. This as the agency's Consumer Information and Government Affairs Bureau issues a letter to Reliant Energy Corporation of Houston Texas requesting that it work with a local amateur operator named Ed Gerber, W5GCX, to resolve an ongoing powerline interference problem. (FCC)

**

ENFORCEMENT: EX-HAM BACK IN JAIL FOR PAROLE VIOLATION

A former ham is back in jail. This with word that Jack Gerritson, the ex-KG6IRO of Los Angeles will be spending the next three years in prison for violating parole on an earlier conviction involving malicious interference to emergency service communications.

As previously reported, Gerritson was arrested and convicted in 1999 for radio interference to the Los Angeles Police Department. On November 14, 2001, Gerritson's ham radio license and KG6IRO call sign were set aside by the FCC.

Gerritson was freed from prison on probation after serving one year of a five year term. After his release, the FCC says that he continued operating and causing deliberate interference to numerous Amateur radio repeaters in the Los Angeles area. So this past January 29th, Los Angeles FCC agents participated in a pre-dawn arrest of Gerritson. His arrest came in direct response to complaints of death threats allegedly made by Gerritson on a 2-Meter Amateur Service frequency. (FCC)

**

RADIO LAW: FCC DISMISSES DISH ANTENNA CHALLENGES

The FCC has dismissed several petitions for reconsideration of it's 1996 direct broadcast satellite antenna Report and Order. In the order, the Commission had preempted local regulations that imposed restrictions affecting the installation, use and maintenance of satellite earth station antennas one meter or less in any area or two meters or less in commercial or industrial areas.
Nine petitions for reconsideration of the 1996 Report and Order were filed. Then, in October of 2001, the FCC's International Bureau released a public notice asking parties to refresh the record regarding petitions for reconsideration of the Antenna Report and Order.
In the public notice, the Bureau noted that, since the release of the order, many of the issues raised in the petitions for reconsideration may have become moot or irrelevant in light of intervening events. No petitioner filed in response to this public notice. The FCC has now dismissed those petitions on the grounds none have not indicated an intent to pursue their respective appeal. (FCC)
**

RADIO REGULATIONS: MICROWAVE RADOMES PROPOSED FOR LOCAL FOREST SERVICE SITES

The CGC Communicator reports that the Forest Service is proposing to require radome covers on all microwave dishes that are installed on Forest Service land in the state of California. The service says that this action is necessary to protect the California Condor from perching on the horizontal feed horns of the dishes and becoming microwave baked. The decision comes in the wake of an environmental lawsuit brought by conservationists. (CGC Communicator)

**

CONTESTS: CQ WW VHF WEEKEND

Changing gears, word this year's CQ World Wide VHF Contest will be held the third weekend in July. Operations commence at 1800 U-T-C on July 20 and ending at 2100 U-T-C on July 21, 2002.

Please note that this date is one week later than in past years. The change comes in response to numerous requests by the participants and potential participants. The old date was in direct conflict with the I-A-R-U contest and the World Radiosports Team Championship games. It also occurred only one week after the European Field Day. Complete rules can be found in .pdf format at
http://www.cq-amateur-radio.com/VHFRUl02.pdf (W3ZZ)

**

AWARDS: KB2YAA NAMED BY PIONEER RADIO OPERATOR SOCIETY

And congratulations go out to Gary Tillinghast, KB2YAA, of Springville New York. This, on his being named as the Pioneer Radio Operator Society Amateur of the Year. KB2YAA is an active member of the Handi Ham System which made public the news that he had received this prestigious honor. (Handi Hams)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

REGULATORY: ARE YOU ELECTROSENSITIVE?

Are you ectrosensitive? That is, are you one of those people who is unusually sensitive to radio frequency fields?

Well a group called the Cellular Phone Taskforce thinks that some people are. It also believes that the FCC should not allow certain RF telemetry equipment in health care facilities. The Taskforce's holds the opinion that these R-F fields will have what it calls the "unwanted, illegal and unconstitutional effect of depriving electrically sensitive persons of access to health care.

Well, it turns out that the electrosensitivity issue was considered by the FCC some time ago in E-T Docket 95 dash 177. After giving it consideration, it was dismissed. More information can be found at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-02-135A1.doc (FCC)

**

EMERGING TECHNOLOGY: FLYING THE INTERNET

Three airlines -- American, Delta and United say they will offer high-speed Internet connections on some long-distance U.S. flights beginning this summer.

The connections will cost around $20 an hour and offer e-mail, access to the Web, and live television broadcasts. The airlines say that they hoped to eventually expand the service to most of their domestic and international flights. Passengers would have to bring their own laptop computers. (Computer Daily)

**

SPACE AND SCIENCE: HAMS SET NEW SPACE ENDURANCE RECORD

Two American ham radio operators have broken NASA's space endurance record of 188 days and four hours. But astronaut Dan Bursch, KD5PNU, declined a playful suggestion from Mission Control that he might want to go for the 438-day world record.

Bursch's fellow space-traveler, Carl Walz, KC5TIE, was with him in the space station and the shuttle and shares the endurance record. The two astronauts broke the record while in bed, ready for some shut-eye. The old U.S. record was set by Shannon Lucid in 1996 aboard Russia's now de-orbited Mir station. (NASA)

**

SPACE TECHNOLOGY: JPL TAKES COMMAND OF FRENCH SATELLITE

The Jet Propulsion Laboratory in Pasadena California is now handling command sequences for a weather satellite the French launched in December. Over the next six months, data from Jason I will be dissected by JPL's team of scientists, who will study interactions of the world's oceans and atmosphere and observe events like El Nino.

Until now, Jason I has been under the guidance of the French Centre National d'Etudes Spatiales. With the handover, JPL will be responsible for sending command sequences to the spacecraft. The French agency will continue to perform navigation and engineering tasks. (NASA)

**

INTERNATIONAL - U.K.: HAM RADIO HELPS CELEBRATE QUEEN ELIZABETH'S GOLDEN JUBILEE

On the international scene, Amateur Radio was front and center with a commemorative station near Windsor Castle when Britain's Queen Elizabeth celebrated her recent Golden Jubileee. Jeramy Boot, G4NJH, reports from Nottingham in the U.K.:

--
As of 1530UTC on Tuesday the 4th, GB50 had made in excess of 14,000 contacts, putting them within reach of meeting their own target of 20,000 QSOs during the operation. More importantly, over 2000 members of the public had visited the station and 'Amateur Radio Experience' exhibition by Tuesday afternoon, the majority learning about amateur radio and the Foundation Licence scheme for the first time.

Also on Tuesday, no fewer than 41 members of the public were able to send greetings messages from the GB50 station, giving them a real 'hands-on' experience of amateur radio.

Jeramy Boot, G4NJH
--

The GB50 station closed down operations at 21:00 UTC on Sunday, June 9th. (RSGB)

**

INTERNATIONAL - SOUTH AFRICA: A LICENSING RECORD

South Africa has set a new licensing record. This as the results of that nations May 2002 Radio Amateur Examinations or R-A-E are announced. Q-News Graham Kemp, VK4BB, reports:

--
Results of the May 2002 Radio Amateur Examinations are published in record time. The results of the RAE, held in South Africa, written 23 May, were announced on 30 May. Each candidate who passed the examination and had completed a license application form has also been issued with a callsign.

95 of the 113 candidates who wrote the examination were successful. The highest marks were achieved by Dr G A Keen of Cape Town, 100% in both the papers.

The youngest candidate to pass the class A examination is 15 year old Q D Du Preez of Durban who now boasts with the callsign ZR5QD. The oldest to pass, 72 year old C H Stevens of George who now boasts ZR1AWG.

>From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

The South African licensing program is considered to be one of the most progressive to be found anywhere in the world. (Q-News, SARL)

**

DX

In DX, G0TQJ, is currently in Afghanistan and operating portable Y-A. He reports he has openings to Europe on 10 meters around 13:00 UTC. Chris is using a Yaesu FT-890 transceiver running 100 watts to an 80 to 10 meter Windom antenna 50 feet high. He is active on SSB and RTTY. QSL to his home call. (GB2RS)

And OZ7SM will be active from Bornholm through June 16th. Most of the operation will be on SSB on all bands including 6 meters. Bornholm counts as EU-030 for the Islands on the Air awards program. (GB2RS)

**

THAT FINAL ITEM: ITS AN ENIGMA NO MORE

And finally this week, we have reported before on Germany's World War Two top-secret Enigma spy machine. This was the message encoding device that gave Germany the ability to keep its military movements secret during much of the conflict. Now, it appears as if a British woman actually cracked a major component of the Enigma before World War Two began, but her supervisors dismissed her theory as too simple. Bruce Tennant, K6PZW, picks up the story:

--
British newspapers have printed excerpts from the new publication titled "Action This Day." The book claims that discoveries made by a female codebreaker known only as "Mrs. BB" that could have opened the secrets of the encoding machine much earlier and shortened the war.

In the late 1930's the Enigma was dubbed the key to Germany's military communications system. Codebreakers including Alan Turing, the father of the modern computer, were trying in the late 1930s to break the Enigma cipher, but they could not work out how the keys of the Enigma machine were wired.

The book's editors, Michael Smith and Ralph Erskine, say that "Mrs BB" suggested the Germans wired the A key to the A rotor, B to B and so on through the alphabet. This theory dismissed as too simplistic, but was later proven to be correct.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles
--

The full Enigma code was finally cracked by a team of thousands of men and women, including chess masters, civil servants and mathematics geniuses. (Published news reports)

From: vald@productionroom.com
Message-ID: <aeh55o$r7r$1@xuxa.iecc.com>
Source record: 10606

I have not posted to this group much since Bill Pfieffer died. It's frustrating to see where things have gone without the newsgroup founder's guiding hand.

As for Internet radio, it's true that lots of would be broadcasters have taken to the Internet as a means of getting their own "signal" on the "air". I suspect that alot of the monikers (i.e Power 102 or RadioParadise.com) come out of a love of radio and what the word "Radio" means. I am sure many would argue that "radio" (according to the dictionary) is directly tied to the transmission of audio through the ether. However, there are many like myself who view radio as a means of communication and expression. When I started in radio at the age of 14 in Cape Girardeau, MO (1974), I got into it out of a passion for the music, the creativity and the freedom of expression that made it simply magic. Today, the majority of those traits are strictly banned from most commercial broadcast facilites (with the exception of commercial production). I love Internet radio and these days it's the only source of news, music and information that will satisfy me.

I don't care what they call it. I love it.

Also, there is a semi-standard for streamed Internet Audio. The Shoutcast MP3 stream can be listened to with the Microsoft Media Player, Real Audio and Winamp/XMMS. Between these 3, I think all Operating Systems are covered including Windows 2000, Win98, most flavors of Linux and Mac OS-10 (which is really Linux as well).

Do I understand you correctly? You want to -- have an internet broadcast,
but charge people $1 an hour to listen?

Or, you will let people on the station with you if they pay you $1 per hour?

In either case -- anyone can set him/herself up at www.live365.com. I know of
one person who isn't making money, but he has a specialized niche and he
probably breaks even on it with advertising to those niche interests.

Which .. looks like that's where the future of 'netcasting may go. Niche
broadcasting.

1947. Sirius and XM antennas interchangeable?

Newsgroup: rec.radio.broadcasting
Date: 2002-06-16 04:45:49 UTC
From: mailias@yahoo.com
Message-ID: <aeh55traj1@xuxa.iecc.com>
Source record: 10608

I've done a semi-permanent install of a Sirius radio in my car. I'm thinking about trying XM too. Can I use the same antenna by just switching it over to the XM receiver?

The antenna I have is the one made by Terk that looks like a mouse. Terk makes versions for XM and Sirius, and by looking at them the only difference is the screen printing of the respective logos.

So, can anyone anwer whether or not this will work???

If it happened on channel 2, it probably wasn't ducting. It was likely ionospheric conditions (aided by sunspots) and the Spokane signal -- which would normally go out into space, was "bounced" back down to earth and you received it in San Diego. Ranges are typically in the 700 to 2000 mile range.

When ducting occurs, it is usually due to weather conditions. And it usually affects the UHF
channels and can work its way down to VHF. Ranges are usually in the vicinity of 200-500 miles.

Source record: 10615

>>
So ... what was your power before this time. There's the talk of being the lowest power AM station in the U.S. and yet the power is not given to the reader!
>>

Remember, all stations were, at that time, required to be either: 0.1 kW, 0.25 kW, 0.5 kW, 1 kW, 5 kW, 10 kW, 25 kW or 50 kW.

No "dial a power".

Class Is were required to be 50 kW, unless "grandfathered" at 10 kW (applied only to 1560 in Bakersfield and, initially, to 1560 in New York ... plus two Canadians, two or three Mexicans and one Bahamian).

Class IIs were requried to be 0.5 kW to 50 kW.

Class IIIs wer required to be 0.5 kW to 5 kW. The 0.5 kW minimum resulted in many stations on regional channels having to be Class III-Ds (daytimers).

After Class II-A/B and Class III-A/B were "harmonized", 0.25 was allowed for regionals, and many new ND stations were added to regional channels, with 0.25 kW nights (the new minimum for a Class B).

0.1 kW was applicable ONLY to Class IVs before about 1965, and to the very, very few Class IVs which operated on regional channels, and were "grandfathered" under certain exceptions to Part 73.

For instance, the Class IV at Mojave, CA was operating unlimited time with 0.1 kW at about the same time KPPC was operating with 0.1 kW on it's specified hours schedule.

Mojave subsequently moved to 0.25 kW days and nights, then 1 kW days and 0.25 kW nights, and now is 1 kW days and nights. On the same local channel.

(The grandfathered Class IVs operating on regional channels are still 0.1 kW nights).

KPPC apparently moved to 0.25 kW, specified hours, as 0.1 kW was deleted as an official power (except for KGFJ's simultaneous operation with KPPC, and the aforementioned Class IVs on regional channels).

Later, 2.5 kW was added.

So, the answer is KPPC was 0.1 kW, as that was the only legal power under 0.25 kW which was available to it.

"Lowest powered station in the U.S."? No way.

Observe, listen and ask questions. Fight the temptation to explain how you "did it in college." Remember, this isn't college anymore. Everything that's done, and the way things are done, are done for a reason. Find out what the reasons are.

Follow those rules, and you'll learn a lot. Some would even say that this is where your *real* education begins.

During the tour of XM this past Wednesday, the VP Operations of XM said
that the antennas are compatible with both XM and Sirius. He was
pointing at a Terk mouse/hockey-puck antenna while saying this.

His answer was in reply to a question about when radios that will tune
both XM & Sirius would be available. "Antennas are now. The antenna may
have an XM or Sirius logo, but they are the same." FWIW

Having seen and heard what's taught at most colleges and having occasionally taught at them myself, I can say this is very good advice.

Schools typically don't have the funds to put together studios that resemble teh professional environment. Of course there are exceptions on both sides.

You now have a great opportunity to learn new skills and take your chops to the next level.

"4 or 5 years" ... I suspect it depends a lot on relative sales. IMO, XM isn't going to see an advantage to a dual standard receiver as long as they are way ahead in receiver sales. I'd guess it would take a year or more to engineer a suitable XM/Sirius decoder chip, and the delay would start AFTER both companies agreed that it was better to have dual-standard receivers. I can see all sorts of problems in getting cooperating, given proprietary nature of both companies' algorithms.

IIRC, the FCC requires dual-standard receivers, but AFAIK there is no real deadline. The VP postulated that someday there might be programmable receivers that configured themselves for XM, Sirius, or IBOC depending on which button you pressed - but using common decoding hardware.

When they realize that having two separate, incompatible services isn't
going to make it.

Furthermore, the drift in business today is conglomeration. Companies HATE
competition...it gives the consumer choices. Today's business ethic is to
take away as many choices as possible from the consumer so that he is forced
to buy your product at whatever price you wish to charge.

It only makes sense that one of the two services will buy the other out
before the game is up.

I would have replied off list to save from starting a flame war among the processing/anti-processing crowd...but you don't have your real email address in..so..
I spent weeks running all my songs through scripts in Cool Edit that did multiband processing on them, like an Optimod. So streaming in OGG wouldn't really be feasible..
I agree with you however that RP is obsolete. Remeber the days when they were THE protocol though? All there was was RP and crappy 'ol NetShow.

Cheers,
Scott

First I'd like to start a radio show, working it into a talk show, and if
it became really popular, then do it as pay for play where people could pay
a small fee to listen to it.

> In either case -- anyone can set him/herself up at www.live365.com.

They get big bucks for it. Look at their rates.

These services are more likely to wind up in the hands of Clear or Fox or Viacom than to merge with one another. As for disappearing choice, my question is, which industries? The Wonder Bread era is over. Everywhere I look I seen greater choice and increasing consumer sophistication, whether it's radio, TV, computers, beverages, breads, cheeses, fitness equipment, whatever. Some lost choice perhaps from overly aggressive exploitation, such as seafood and hardwood products, but, for the most part, consumers rule.

Although on second thought why must every toaster be a wide-slot, bagel-smart toaster? Try toasting two pieces of bread in one of these, the minutes tick away, you're basically powering a small radio station, and the bread barely warms let alone thoroughly toasts. In making a toaster overly accommodating we have destroyed its value as a specialty appliance. Never mind, John. I've answered my own question.

When it's time for lunch, normally how is it arranged at a company? Do you need to hang out with other employees?

Are you operating in another, parallel universe? Radio and TV have never been more bland and homogenized. Computing? Bill Gates controls 95% of the world's desktops. Beverages are made by three major bottling/licensing companies. If you like Coke or Pepsi, you will do fine. Otherwise...

Come to San Jose some time and find out how limited your choices are for high-speed Internet. No cable modems. Very limited DSL (all from SBC). And that's it. Yeah, the consumer rules, all right!

No. With all due respect, I don't think you have a clue about conglomeration in this country and what it is doing to the consumer's choices.

Yes, Des Moines.

As in Iowa.

A new "W" call west of the Mississippi, granted by the FCC to Wilks
Broadcasting for its station at 1700 kHz, effective June 6.

What's up with this??

The call belonged to a Wilks station in New Orleans that just changed formats. I wonder if they are just warehousing the call letters to keep them while they figure out where to use them. They sound like jazz call letters to me.

We presently have a "smooth jazz" station by Clear Channel and an non profit ethnic station that's doing a pretty good job with jazz too. I can't imagine them taking on two FMers with an AM station and on 1700 to boot.

The signal is decent in the daytime, but the frequency sounds like a dogfight at night in the western suburbs. My guess is that their ground system is shot. They also didn't install a tower tuning unit capable of 10kw and are loading the tower as a unipole with the base grounded and feeding three wires that run up the side of the tower. The poor signal in West Des Moines makes me wonder if the antenna isn't giving them a high angle of radiation putting more signal to the skywave and less groundwave.

Ray in Des Moines

I talked to a broadcast attorney a year or so ago and he told me that the old 'hard-fast' rule regarding W and K was on the verge of becoming a little more flexible.
I don't know of any instances where they have granted a callsign with a K in the east or a W in the west (until I read your post) but I recently heard of another case where a station in Nebraska applied for a W callsign (still unapproved according to the FCC Database).

Yes I sure do.....mid-90's (94-95) when they were "progressive networks" and thier player was Real Audio.....no vidoe players at all. I remember listening to Air Traffic Controllers in Chicago on my 14.4 modem under my AMD 486 computer......oh those were the days ;-)

John, we're in the same universe but observe it very differently. We gained 200 channels of satellite radio in the past year. We enjoy webcasts from all over the world. To catch CBC's Ideas, or BBCR4's Afternoon Play, or Democracy Now, or The Connection, you previously had to live near an affiliate. There's now a cornucopia of choice in radio programming. Most of it isn't free on AM and FM. But AM and FM were technologies that severely limited choice irrespective of consolidation...and of course it's contradictory to judge the responsiveness of markets by what's available free.

Our gains in computability are every bit as dramatic. You can now buy a self-contained mainboard for under $100 with audio and video. Call that a gift from Microsoft. You don't have to buy Microsoft software to run it, but you benefit anyway because Microsoft software created the mass market that made that kind of hardware attainable. Its 'predatory' pricing and licensing policies commoditized hardware platforms. Staggering power yes, in the service of consumer choice and individual creativity.

The microprocessor is at the heart of the microbrewery. American beer was for years mainly mass produced swill. We're now world-class creative brewers. We're also sick of sodapop, which is why your convenience store offers dozens of teas, powerades, juices and waters to go along with the designer beers.

Consumers have serious, legitimate gripes in the availability of affordable health care. And globalization is very tough on producers; your computer job can move to Bangalore in a heartbeat. But this is on balance a world in which consumers are gaining amazing choices, not losing them.

Jerome

Yes. That is possibly because I am putting it in historical perspective and
I don't confuse a diversity of packaging with real choice.

> We
> gained 200 channels of satellite radio in the past year.

Oh, I have hundreds of channels of TV and still find nothing worth watching
much of the time. Quantity does not ensure quality. The same applies to
audio programming.

> We enjoy webcasts
> from all over the world. To catch CBC's Ideas, or BBCR4's Afternoon Play,
> or Democracy Now, or The Connection, you previously had to live near an

Nonsense. Ever heard of "shortwave"?

> There's now a cornucopia of choice in radio programming.

Space prohibits listing the things you won't find, even on satellite radio.
It is still restricted playlists of all the usual format suspects. There is
nothing of innovative note on any of the audio services, be it DSS, XM,
Sirius, or whatever.

> Our gains in computability are every bit as dramatic. You can now buy

Again, nonsense. What if I don't want Intel-platform boards?

Most of which all taste alike.

The bottom line is that you are equating a plethora of brands and branded
product differentiation with "choice".

Sirius and XM operate on different frequencies within the 2 Ghz band. The Sirius (Terk) antenna may be the same but the block converter (electronics) is calibrated for their specific frequency.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

1980. Re: Sirius and XM antennas interchangeable?

Newsgroup: rec.radio.broadcasting
Date: 2002-06-19 13:29:35 UTC
From: ejxit <ejxit@yahoo.com>
Message-ID: <aeq0vvgpd1@xuxa.iecc.com>
Source record: 10643

Sirius and XM operate on different frequencies within the 2 Ghz band. The Sirius (Terk) antenna may be the same but the block converter (electronics) is calibrated for their specific frequency.

Mail Ias wrote:

I am looking for somebody who has or who knows somebody who has experience or contact with the Italian company Tiesseci. I bought the radio automation system TS 2000 K8 from them and even upgraded to the K10 for a bag full of money. I do not get support and need urgently someone to help me or who can direct me somewhere to get support.

1982. Re: Conglomeration, was Re: Sirius and XM antennas

in article aenf87$ls0$1@xuxa.iecc.com, Cooperstown.Net wrote:

> John, we're in the same universe but observe it very differently.

Yes. That is possibly because I am putting it in historical perspective and
I don't confuse a diversity of packaging with real choice.

> We
> gained 200 channels of satellite radio in the past year.

Oh, I have hundreds of channels of TV and still find nothing worth watching
much of the time. Quantity does not ensure quality. The same applies to
audio programming.

> We enjoy webcasts
> from all over the world. To catch CBC's Ideas, or BBCR4's Afternoon Play,
> or Democracy Now, or The Connection, you previously had to live near an
> affiliate.

Nonsense. Ever heard of "shortwave"?

> There's now a cornucopia of choice in radio programming.

Space prohibits listing the things you won't find, even on satellite radio.
It is still restricted playlists of all the usual format suspects. There is
nothing of innovative note on any of the audio services, be it DSS, XM,
Sirius, or whatever.

> Our gains in computability are every bit as dramatic. You can now buy
> a self-contained mainboard for under $100 with audio and video. Call that

Again, nonsense. What if I don't want Intel-platform boards?

> The microprocessor is at the heart of the microbrewery. American beer
> was for years mainly mass produced swill. We're now world-class creative

Most of which all taste alike.

The bottom line is that you are equating a plethora of brands and branded
product differentiation with "choice".

1983. Stations that broadcast old radio drama programs?

Newsgroup: rec.radio.broadcasting
Date: 2002-06-19 17:05:14 UTC
From: ATandTRules9836@aol.com
Message-ID: <aeqdkakin1@xuxa.iecc.com>
Source record: 10645

Hello, everybody! :)

Sad to say, a radio station that once USED TO be my favourite -- 104.5 CHUM FM
-- has not only gone to Hel Sinki in an handbasket, but they have also killed one of my favourite programs, namely Theatre of the Mind, which ran from 11:00 p.m. to midnignt on Sunday nights. In so doing, they have shamelessly put an end to a twenty-five-year tradition! :(Needless to say, I won't be listening to CHUM FM anymore! ;) But I digress ...

This is my real question: Now that Theatre of the Mind is dead, are there any
other radio stations that broadcast classic radio drama programs in the Greater Toronto Area? (I am thinking of such classics as The Shadow, the Green Hornet, Edgar Bergen and Charlie McCarthy, etc.) And if there arent any local ones in the GTA, then are there any stations that broadcast those kinds of programs over the Internet? If there are, please tell me the locations of those stations and the times that they have those programs on! :)

Thanks in advance for answering my question! :)

Talk to y'all later!

Makes me glad I didn't buy their software. Tiesseci was at NAB this year, so you probably could call NAB Headquarters and ask them to give you their phone number and mailing address. Failing that, a Google search might yield results.

Actually, contact info should be on your software. A few years ago, I considerd their product and phoned them in Italy for some more information. They were easy enough to get in touch with then, and spoke fluent English. It doesn't cost much for the phone call these days.

Mark.......try scanning the radio dail, many "pirates" play Oldtime
radioplays (I did ;-).....and I collected all of them from the Usenet).
Unlike commercial conglomerates, many pirates beleive in alternative
programming and have the balls to play unsual stuff ;-).

Also try www.live365.com or www.shoutcast.com OR get a good Internet
Service Provider and a good Newsreader Program (Try Forte's "Agent".
www.forteinc.com ??? (try google search to find Forte's site).

After you've got Agent.....configure that newsreader to the
news server of your ISP (similar to the mail server ususally just the name
of your ISP plus the ".news" at the end. (try looking at you ISP' home page

to find the exact name of your newserver.

After you have Agent configured.....subscribe to the:

alt.binaries.sounds.radio.oldtime
alt.binaries.sound.radio.oldtime
alt.binaries.sounds.radio.misc (this group I post my own Amatuer SciFi. Radioplays I've done myself)
alt.binaries.sounds.radio.bbc
alt.binaries.sounds.radio.british
alt.binaries.sounds.radio.oldtime.highspeed (for folks with DSL/Cable modems)

The above newsgroups have 1000's of folks who upload all ther personal collections for all to download to keep and enjoy! (I have 100's of CDr's full of OTR shows...all thanks to the generosity of great folks from all over the world who love good radio!

You must have a decent ISP however.....most really suck WRT newserver quality.....and after you configure your newsreader you may see files like .....The Shadow.1/25, The Shadow 5/25 ...etc..... this means your ISP's newserver "lost" (actually never got) the sections 2 through 4 of the Shadow show!!!!!!!!! Agent will not be able to combine this file since segments are missing!

Good ISP's provide full segemnt posting however ;-).....The only way to find out the quality of your ISP's newserver is to just configure your newsreader and log in to the above groups.....if you get all the numbered segments you good to go!

IF NOT! then you can jion a special newsgroup service for 10-bucks a month.....these include www.supernews.com www.giganews.com., www.airnews.com , www.usenetnews.com (or try google www.google.com to find their homepages).

And by all means join us in.....alt.radio.oldtime .....we welcome all newcomers ;-)

From: gjeff@one.net
Message-ID: <aeqnup$mr3$1@xuxa.iecc.com>
Source record: 10649

is it feasable tha the hardware people could make dual band antennas and tuners? The initial investment would be alot easier to swallow if you could switch services whenever you wanted.

:Sirius and XM operate on different frequencies within the 2 Ghz band. The Sirius :(Terk) antenna may be the same but the block converter (electronics) is :calibrated for their specific frequency.

1987. Re: ATT's newserver and how to configure for Agent

Newsgroup: rec.radio.broadcasting

Message-ID: <aeqnurmrg1@xuxa.iecc.com>
Source record: 10647

I see you have ATT, thier newservers are 100-percent retention
(excellent!)....the name of their newserver is:

"netnews.worldnet.att.net".......leave out the quotes in the configure box
under Agent.

Here is how to get Agent up and running and connecting to the
newsgroups.......

1. goto "Options" at top of the menu screen
2. goto "User and System Profile" from the drop-down
3. pick the "System" tab from the nested/tabbed dialog box
4. in the "news server" box put.....netnews.worldnet.att.net

Enjoy there are thousands of shows sitting on that server for you to
download ;-)

I wouldn't expect to see dual frequency Lnb's for these 2 sat radio services anytime soon.

Sirius uses 2320 to 2332.5 MHz. XM uses 2332.5 to 2345 MHz. The total
bandwidth required is about 10%. It would seem fairly straight-forward
to design antenna elements that cover the whole range.

Some have said the there is a down-converter within the antenna. If so,
that __might___ be a problem, but might __not__ be a problem either....
If there isn't a down-converter, there must be an amplifier to overcome
the high loss of the tiny coax cables at microwave. Wide-band, wide
dynamic range microwave amplifier chips cost less than one dollar in
quantity.

Can't speak to Toronto, but you can listen to Golden Age of Radio from WBAI-FM (99.5) in New York via their RealAudio feed at www.wbai.org or via their MP3 feed available at www.2600.com. It's on from 7 PM to 9 PM Sundays.

[Moderator's Note: 2600? *That* 2600? Aren't most of the people visiting that site way too young to take interest in classic radio - or am I missing something?]

$700 is not a lot of money. If you are that good, and that unique - you
should be able to recoup that in advertising.

It sounds like the problem with dual band is more legal than technical.
If so, thats called shooting oneself in the foot.

Problem is that I do have all the info...I even spoke to them...send
e-mails but they just dissapear and never answer the questions. I live
in Namibia in Africa and mu phone bill is over the top.

No one seems to have pointed out that the "antenna" is the hidden-price gotcha in these systems. Notice in the advertising the quickly read phrase, "programming and antenna extra and billed separately".

No, there are no plans to make a universal unit. That would defeat the entire point of the exercise: a hidden cost to make the deal look better to the consuming public.

I'm sorry to hear that. I ended up with Raduga, which is reasonably priced,
works really well and has excellent customer support via the internet or phone.

1996. WRR Dallas

Newsgroup: rec.radio.broadcasting
Date: 2002-06-21 02:02:25 UTC
From: chuxgarage@aol.com
Message-ID: <aeu1fh$r0b$1@xuxa.iecc.com>
Source record: 10563

I keep hearing rumors about big changes at this city owned classical music station. First their Sales Manager "retired" last week. Now I'm hearing they may swap frequencies with a North Dallas rim-shot. The object of this exercise being to fill the coffers of the City of Dallas, which has an $80-85 Million deficit this year.

Any news? I'm no longer a Dallas resident, but I like to keep up with some of my old friends.

TIA,
Chuck

I can understand why the antenna migh not be included with the basic
radio, but why is it billed seperately, rather than with the radio? I
assume there is more to this than meets the eye, or than you have said.

If you like hearing old time radio shows from the 30's -
early 60's that includes the original ads, try this station:

http://www.classicstars.net

The Shadow
X-Minus-One
Chandu The Magician
Suspense
The Lone Ranger
Abbott & Costello
Superman
Amos n Andy
Lux Radio Theater
Burns & Allen
Green Hornet
Gunsmoke

To mention just a few

do like old radio shows and the commercials from the time
imbedded in the shows on this station are unbelievable

Hi all. I am looking for modules for Auditronics 110 consoles.
Specifically, I am looking 110B-SIM, Stereo Line Input, modules but
could use whatever else you might have. Both of my 110's are loaded
with 110B-1ME, Mono w/EQ, modules that I would be more than willing to
swap for your SIM's. Thanks.

From: Chad Billheimer <musicdirector@wqrp.org>
Message-ID: <aeu1fs$r3b$1@xuxa.iecc.com>
Source record: 10559

I apologize if this is the wrong newsgroup to post this.

Our station's turntables are very old and in need of upgrading. If you have one or more nice units we have the following equipment that we could possibly incorporate into a trade:

Otari MX-5050 1/4" reel-reel recorder
some Matchboxes and Matchbox II's
dbx 1066 compressor/limiter/gate
Modulation Sciences Sidekick
a couple of DAL card D's
Audio Metrics distribution amplifier
Otari 1/4" reel-reel playback decks (several available)
1/4" tapes on 10 1/2" reels (hundreds)
Inovonics audio processor

Thanks,
Chad Billheimer, WQRP

The antenna is included in the basic price of the Sony XM unit. It isn't
an "extra".

2002. Radio 510 International new frequency and schedule - starting this Saturday!

Newsgroup: rec.radio.broadcasting
Date: 2002-06-21 12:34:59 UTC
From: stevie@radio510.org
Message-ID: <aev6hj$dv0$1@xuxa.iecc.com>
Source record: 10565

Starting this Saturday 22nd of June, you'll be able to hear Radio 510 International programmes at the following times and frequency:

Saturday 08.30 - 09.30 UTC (10.30-11.30 CET) on 13840 kHz
Sunday 08.30 - 09.30 UTC (10.30-11.30 CET) on 13840 kHz - this is the repeat from Saturday!

Our signal can be heard all over Europe,N.Africa and the Middle East. Listeners in the USA and Canada might also be able to pick us up. For those who would like to listen to our live feed, please click here http://mp3.nexus.org More information can be had at our website http://www.radio510.org which is updated three times a week.We also have a "News Letter" which you can subscribe free of charge and is sent out every Friday via email with all the details of our upcoming programmes and more radio related stuff.Go to our "Mailing List" at our website for more information.

Some of the stations that you'll be able to here in the next coming months:

Radio Casablanca Germany
Radio Joystick Germany
Radio IMR Switzerland
Radio Waves France
Radio 510 International Switzerland
Radio Sparks Switzerland
East & West Radio Germany
Radio Wonderful Germany

** All shows are in English and German

Calling all stations!
If you'd like to have your station played,we charge 35 Euro's for a one hour show plus a free repeat.More details can be found at our website or you can contact us at info@radio510.org Our schedule is full till the middle of August so please be quick if you're interrested in getting your show aired.

Before we go, a very big thank you to all the clubs,listeners and websites which have supported Radio 510 International during the last 8 years. Without your outstanding support and dedication we wouldn't be here today.

That's it folks! Many thanks for your time and patience. Hope you'll enjoy the programmes and keep on coming back for more. If you do hear us, please let us know via email stevie@radio510.org or snail mail Radio 510 International,P.O.Box 510,4010 Basel, Switzerland. All

reception reports will be answered with a personal
letter,sticker,infosheet and a colourful QSL card.

Best wishes from Switzerland

DJ Stevie

Is the a station (on AM) in Texas that plays this at night? I picked
it up once from WTIX 690 (New Orleans) last Christmas but haven't
heard it since.

How bout a complete station listing?

The city council agreed to get an appraisal of the station earlier this week.
Apparently two station groups have offered to swap frequencies for some cash.

The council has had a lot of pressure in the past not to tinker with WRR - but
this may be too much to pass up.

2005. XM audio quality

Newsgroup: rec.radio.broadcasting
Date: 2002-06-21 18:40:56 UTC
From: Bob Olhsson <olh@hyperback.com>
Message-ID: <aevrvo$5l$1@xuxa.iecc.com>
Source record: 10567

I've been using the Sony to feed my regular mastering room system. The music audio quality varies a great deal from recording to recording. At its best it's really good. The spoken word channels, on the other hand, do have lossy coding artifacts.

I suspect the "neural encoding" causes this wider range of quality in music reproduction than I would normally expect. The "magic black box" advertising on the supplier's web site is not very encouraging to me as a very serious student of psychoacoustics for more than 40 years. Hopefully XM are not assuming that one size of "enhancement" is going to fit all.

In summary, the quality isn't as good as audiophiles would like but I think it is easily better than most contemporary FM stations. (WFMT in the 1960s was unforgettable...) Considering how enormous their encoding task was and how new all of the technology is, XM could easily have sounded a whole lot worse.

>> Hopefully XM are not assuming that one size of "enhancement" is going to fit all. <<

XM is using so-called "Spatial Band Replication" (SBR). This is basically a trick to save digital bandwidth, to squeeze those 100 channels into a smaller spectrum space.

With SBR, the high frequency sounds (above 8 kHz, I believe) are not carried through with the audio that the satellite is beaming to your XM receiver. Instead, they are faked ("replicated") based on harmonics of the lower frequencies (below 8 kHz). The result is supposedly good enough to fool most people, but anybody familiar with the original recordings can tell the difference, because the high frequencies SBR creates are by no means necessarily representative of the original audio in the music.

Here is an example of SBR, similar to what XM uses, as re-recorded into a plain MP3 file so you can hear it without a special player:

http://www.uni-jena.de/%7Epfk/mpp/audio3/mp3_sbr_64_8_20.mp3

I suppose SBR could be compared to taking a color photograph, turning it into a black & white photo, and then having Ted Turner colorize it just like an old movie. In this case, the results might be good enough that many people can't tell the difference, especially if they don't have the original true color photo to compare it with... but anybody with a good eye can tell the difference, and in the case of XM, hear the difference.

Speaking of which, I was recently watching a music video and I was wondering why the colors were washed out and unnatural looking. Then I realised it was a colorized version of black & white film -- but this video is from the year 2000! However it is a nostalgic song that harkens back to the '50s, so I guess they decided to go all-out by making it with colorized B&W video and Monaural sound. I guess I should expect that because this same musical group did another music video entirely in black & white with mono sound. Yesterday's old technology is today's "special effect", I guess!

2007. Radio crazy! AM for sale!

Newsgroup: rec.radio.broadcasting
Date: 2002-06-22 21:55:08 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <af2rnsndt1@xuxa.iecc.com>
Source record: 10569

For sale:

Partial ownership of a class "C" AM (formerly called Class IV, silly!)in Guthrie, Oklahoma. About 25 miles N. of Oklahoma City with a useable daytime signal there!

1490 KHz, 1 KW fulltime. On the air since 1955. Station is "dark" since August 4, 2001 and must be back on the air by August 4, 2002 or else!

Active or inactive investors with at least $5,000 are welcome. All investors would be on the board with full voting righs if desired.

The total consideration is $85,000 with $20,000 down. Seller financing of the balance. 3 years at 7 percent interest.

NO repeat NO real estate or studio gear is included. What we DO get is the tower, ground system with 240 radials and an old clunker of an AM transmitter! Of course we also get the FCC license (expires June 1, 2005) and the goodwill. We must give up the callsign KOKC on closing and apply for new call letters of our choice.

The tower will be allowed to remain where it is.

No "AM bashers" or negative nabobs. If you hate AM, don't call!

73,

Meyer Gottesman, W6GIV

| The call belonged to a Wilks station in New Orleans that just changed
| formats. I wonder if they are just warehousing the call letters to keep
| them while they figure out where to use them. They sound like jazz call
| letters to me.

As of June 18, the station is back to KBGG. The WSJZ calls haven't
ended up anywhere else, at least according to the CDBS data.

Could be yet another tidbit for the quite enjoyable
desmoinesbroadcasting.com.

2010. KBGG to WSJZ back to KBGG in 14 days

Newsgroup: rec.radio.broadcasting
Date: 2002-06-22 21:55:13 UTC
From: Ray Dennis <Realtor@RayDennis.com>
Message-ID: <af2ro1$ng2$1@xuxa.iecc.com>
Source record: 10571

Wilks Broadcasting changed the call letters of KBGG 1700 to WSJZ on June 6th.

On June 20th, the call letters were changed back to KBGG.

Wilks had used WSJZ on a New Orleans station that just changed call letters and formats. Do you suppose they used the Des Moines station to warehouse the call letters for a few days until they got control of another station?

Another theory: since WSJZ was a "W" prefix west of the Mississippi, was the whole thing some kind of FCC screw up?

Anybody have an explanation for this one?

Those were the calls for the smooth jazz 96.9 in Boston before they went to
hot talk, if that helps.

Eric Corley has a program on WBAI 7-9 PM ET on Wednesdays, and has been webcasting the entirety of WBAI's 24/7 schedule for a couple of years now.

WBAI carries a widely-varied mix of programming, and that's a severe understatement. One of my must-tape programs every week is Tom Wisker's "Weaponry", the only program on American radio dedicated to covering news and history of the military (focussing a lot lately on procurement strategy issues) mixed with an eclectic selection of country/folk/pop tunes. 1:30 AM to 3:30 AM ET on Wednesday mornings.

This, if it happens, would the same that happened in Cleveland...where long-time classical stalwart WCLV(FM) swapped out its city-grade 95.5 frequency for a rimshot out of Lorain (Lorain!) at 104.9 FM.

Though WCLV isn't owned by the city of Cleveland...the folks who DID own it said it was basically needed to preserve the format in the market, even though a good portion of the eastern part of the market can't even pick up 104.9, which is a good 20-30 miles west of downtown Cleveland (the tower moved a little further east to suburban Avon Lake, but it's still a Class A, I believe).

I say "DID" up there, because transfer to a non-profit ownership foundation was part of the deal. The WCLV folks also picked up the old WHK-AM 1420, which originally was going to simulcast 104.9, but ended up picking up the MOR/standards format dropped by AM 850. The whole thing triggered a multi-station frequency swap a year ago, which our moderator surely remembers ;)

Thank you for this explanation and demonstration. This answers a lot of questions, particularly the apparent damage XM appears to do to certain classical works.

It is amazing, having reached the pinnacle of reproduction in uncompressed digital storage, that we are determined to march backwards to find the point where some acceptable percentage of people will tolerate the intentional defects.

I'm in the process right now of transferring some of my treasured LPs that have never been re-issued on CD to digital. With broadcasting in its current state and satellite radio with its audio "quality", I'll be depending on my own library more and more for music on the go.

Could that be transcoding error? Most of their spoken word programming originates outside their control and could come in over channels that are coded. I'd hope that they'd go to their partners and put their coding equipment right at an analog or raw digital source, but that may not be possible.

2024. I can provide working numbers for BSI Wavestation!

Newsgroup: rec.radio.broadcasting
Date: 2002-06-24 13:30:06 UTC
From: j_prenticehall@yahoo.com
Message-ID: <af76suaeu1@xuxa.iecc.com>
Source record: 10585

I have tested the accusation that some have made that
BSI has incorporated a trojan into their software which
deletes files from PC's when cracked serials are applied.
I configured a small hard drive running Windows 2000 Pro
and discovered that these statements are true. My effors
were rewarded with a non-functioning drive. For those
that are planning the same, I offer a warning!

I can generate working registration numbers which incorporates
the use of BSI Wavestation version 3.0.50 and an optional
upgrade patch to version 3.0.53.

I offer the first individual who replies to this post a
single registration number free of charge in exchange for
using him/her as a reference for others that might be
intererested in acquiring a working registration number from
me.

When contacted, I will provide a URL which will provide the
source for the 2 pieces of software mentioned above. The
discreet transaction of a working registration number for a
considerably smaller fee than that charged by BSI will be
arranged with information provided on an individual basis...

Any takers?

Contact me at: j_prenticehall@yahoo.com

This is exactly the trick I have used, specifically with an Aphex aural
exciter, to make a ball game carried over a single-line Comrex or music remote
over medium-bandwidth RPU sound better. Great on speech; mediocre on music.

CD-quality indeed!

Dude,

You are certifiable!

There are two major flaws in you plan:

#1 Its Illegal
#2 When your all done, its still BSI!

I'm so sure that beeing a reference for pirated software is really going to be a great way to build a radio empire!

It's certainly frustrating. The same technology could be used to
provide better quality. Of course the same mentality is driving most
broadcast programming.

WSM here in Nashville has begun editing all of their old live music
broadcasts and putting songs on line for the jocks to play IN ADDITION
to commercial recordings.

I notice that there is a disclaimer that NO REAL ESTATE is involved.
This sale/announcement seems out of the realm of real estate laws/regs and
more into business opportunity w/o any land/building. I was a licensed RE
broker in WI during the 1970s, having a license there which I allowed to
lapse due to inactivity.

>> Most of their spoken word programming originates outside their control and could come in over channels that are coded. <<

When my local NPR station on FM runs the programming of BBC World Service, it sounds like it's coming from a low-bitrate "lossy"-encoded feed. If they use this same audio feed for XM, then it will sound doubly bad.

I also noticed that the latest fad for radio stations is to store all their commercials in what sounds like 128 kbps Joint Stereo MP2. I am thankful to have one FM music station in my area that still plays all of their commercials from carts and it is quite surprising to hear commercials that don't have swishy, squishy, chattery, and twinkly noises going on in the background. I'd take background hiss and an occasional errant 8 kHz cueing tone over that any day!

I don't think Meyer was trying to avoid state RE laws, he was simply stating that the deal was for the business only ... no real estate assets were involved.

One doesn't have to be a RE broker to process a business transaction which involves RE. At least not in my state.

Any attorney admitted to my state's bar can act in this capacity, even though attorneys are not required to be involved in RE transactions in my state ... in contrast to other states where attorneys MUST be involved in every RE transaction.

At 21.15 on 24 June 2002 heard here in Kent in the UK the News Link programme from DW Radio on 439.255 AM. Signal strength was S5 with some dropouts. Is this some sort of link frequency?
Also heard another station on 437.635 AM but unable to get any ID.

Using an Icom R8500 with a Super Scan active antenna at 10mtrs high.

John

Maybe: But I hate companies that discontinue their products.
I have a legal version of Wavestation but connot apply that omn other,
new computers. I cannot buy legal versions.
Now I must change to another system. I hate that attitude of a company,
so their is a certain legitimation in doing this.
Ruud

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

Exactly. I have no problem with it, even if RE assets were involved. If RE were, he'd let the agents/brokers/lawyers do their thing. Business opportunity, however, comes under WI RE law/regs, even sale of gravesites.

BTW, WI is trying to shed its socialist image. Getting rid of welfare at the state level in 1997 was a welcome step in that direction.

Cart machines suffer flutter, wow, phase cancellation, peaky response, and are subject to constant failure in addition to the hiss that you don't seem to mind. Stations in this market dumped cart machines some time ago. In fact, an ITC Series 99B recorder has been sitting on a box near the loading dock of a station for nearly a year now. No one will even steal it!

We used to give old cart machines away to college stations. They don't want them anymore.

A good many use MiniDiscs, those that aren't completely over on hard-drive
systems.

MiniDiscs are not exactly sonically transparent but they're light-years better
than 7.5 IPS tape coated with graphite (clean the heads every shift!!).

Even more interesting site:

www.clearchannelsucks.org

Even though it comes out of a group of jam band fans and smacks a little of "Clear Channel sucks because they don't play the DMB!", this is a well-designed and well-thought out, professional effort and not some POed DJ who just bought FrontPage for his computer and need to let off steam. Worth looking at.

BTW, about a month after that "Quick 96" stunt in Seattle (for what is now the revived KJR-FM), CC's doing it again in Portland, OR, per the above site. You can hear it on www.quick106.com (a site that virtually looks almost exactly like the Seattle Quick 96 site--quelle surprise!).

The nice thing about a CD library is that it is already archived on stable
media than can be played non-destructively.

>> They store the music on the same hard drive using the same codec too, it sounds terrible. <<

Ever listen to "Delilah After Dark" or "Dave 'Till Dawn"? These syndicated music programs, very popular with "soft rock"-type stations, are carried over the satellite at 128 kbps MP2 with Joint Stereo. Keep in mind that *MP2* sounds quite a bit worse at 128 kbps than *MP3* does!

The BBC World Service is commonly carried with as little as 64 kbps Mono MP2. In many ways it sounds better on Shortwave radio than this -- the reception may be poor, but at least you don't get the annoying "artifacts" in the sound!

I'm in the business of supplying software to radio stations, including internet broadcasters. If you're looking to make money with internet broadcasting, don't waste your time. Several big, well-organized companies, like diskjockey.com and netradio.com haven't been able to make it work, and have gone belly-up. If you just want to do it for fun, go for it. Otherwise, it's been my experience that net broadcasting for fun AND profit usually ends up costing you lots of time & money for very little, if any, profit. I hate to discourage anyone from trying their hand in broadcasting, but please approach this with a certain amount of caution. good luck!

If you see a wb site with an annoying pop-up and

Games Classifieds Contests Health&Pets Weather

its clear channel.

Not all the stations have adopted this.

Yet.

The source of the pop-ups is a universaly distributed
so you will see the same thing on any clear channel web page.

Same thing, same thing, same thing.

I believe they were called "fair trade" laws. I think that Wisconsin might have been one of the last, or perhaps the last, to have them. That law is history. Too many people near the borders would shop out-of-state. As of a few years ago, a dealer there could not sell cars - new or used - on Sunday! Maybe it's still the law. Buyers just crossed the state line...

The yellow margarine law went by the wayside during the 1950s. I know
the minimum markup law was changed, and that was clearly over a decade ago.
I only left WI 5 years ago. WI even revoked the prohibition of margarine in
their penal systems! Or so I've heard. The only jails I've visited were in
Monopoly.

Well, the TV news segment I saw on it seemed to indicate otherwise, but it was internet TV broadcasting, where they were selling people who had cameras in their homes to broadcast their activities.

> - Melissa
> Somewhere in Colorado

Just keep in mind that the money has to come from somewhere. There are many voyeuristic web sites that offer subscriptions to exhibitionists who are willing to display their daily lives for a fee. Somehow, I don't think this is what you have in mind, which gets us back to point A, who is willing to pay to watch you do whatever you wish to do? Over the past few years, many internet based businesses have learned that they are not going to get rich by giving away their services, and now they are either out of business, charging for their services, or using annoying types of advertising gimmicks.

Furthermore, how are you going to attract listeners/watchers/subscribers? The net is filled with free radio stations, some good, some bad. I'm not aware of any TV stations, but I don't think I would be interested in watching any net based video with the current level of streaming video quality.

Like the previous poster, I wish you the best of luck, but I cannot imagine that you will ever make any profit.

2070. Re: Stations that broadcast old radio drama programs?

wvxu.com or xstarnet.com
has old-time radio 11am..12noon M..F, also 8..11 Sat.
CBS Mystery Theatre evenings 7..8 pm. All times Eastern.

wamu.org used to run old time radio Sunday evenings, not sure what they
do now.

Hope this helps.

Regards,
Bob N3HAT

Amateur Radio Newsline® Report 1298 - June 28 2002

==========
===
A NOTE TO THOSE WHO ONLY "READ" AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the "spoken word." It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

==========
===

Amateur Radio Newsline report number 1298 with a release date of Friday, June 28st 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams are on the scene of the worst wildfire in years, Australian researchers say they have discovered how to teleport light and an old friend in Earth orbit surprises hams on the ground. Theses stories are first on Amateur Radio Newsline report number 1298 coming your way right now.

(Billboard Cart Here)

**
RESCUE RADIO: HAM RADIO AIDS AT ARIZONA WILDFIRE

It's hams to the rescue, again! This time it is the RODEO/CHEDESKI fire in Eastern Arizona.

Over 350-thousand-acres -- more than half the size of Rhode Island and far from containment!

The FCC reserved emergency frequencies for fire related communications only.... during daylight hours, 7.265 MHz on 40 Meters and after dark, 3.990 MHz in the 75 Meter band.

W7TSA -- a club station operated by the Salvation Army set up at one of the evacuation centers. It operated as primary net control ... with other Arizona stations picking up the duty in shifts -- making sure the frequencies were monitored 24-hours a day.

--
OFF AIR AUDIO HERE
--

One of the priorities, was setting up a VHF repeater, to enable reliable, short-distance communications for mobiles and portables:

--
OFF AIR AUDIO HERE
--

The Forest Service has set up firefighting headquarters in the town of Show Low, and one of the operators at W7TSA, located in the town's high school, gave other monitoring stations a rundown of activity, Tuesday night, June 25th.

--
OFF AIR AUDIO HERE
--

Those two frequencies -- 7.265 and 3.990, plus or minus 3-kHz -- are reserved for fire only duties -- for up to 14-days. Watch for the FCC announcement when things return to normal.

For some interesting short-wave listening, tune in -- but please don't transmit on those frequencies unless you're actively involved in the emergency response. (Story written by Alan Kaul, W6RCL)

**

AMAZING TECHNOLOGY: LIGHT BEAM TELEPORTATION CLAIMED

Some are calling it brand new era in telecommunications. Others say its like the famed Star Trek Transporter coming true. Others simply don't believe that the first successful experiment in teleportation has actually taken place. But it appears to have happened in Australia. Q-News Graham Kemp, VK4BB, is there with the details:

--
Scientists at Australian National University have succeeded in teleportation.

That is, the disembodiment of a thing in one location and its reconstruction in another.

In this case, a beam of light allegedly disappeared in one place and reappeared in another, a short distance away, via the mechanism of quantum entanglement. Data imbedded in the beam were also recovered.

Reporting from Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.
--

Scientists say that if this finding is duplicated and verified, this experiment would certainly be regarded as one of the most remarkable steps forward in telecommunications technology so far this century. (Q-News)

**

HAM RADIO IN SPACE: LONG DORMANT AO-7 SPRINGS TO LIFE

AMSAT OSCAR 7 has returned from the dead and is shipping telemetry data on 145.9738 MHz. This, some two decades after it went silent in 1981 after its batteries failed. Amateur Radio Newsline's Don Wilbanks, KC5MFA, has the details:

--
AMSAT OSCAR 7 was launched in November of 1974. It was one of the first of the more advanced ham satellite designs with uplink on 70 centimeters and a downlink in the 2 meter band. And, working with it's predecessor A-Oh-6, it was the first ham satellite used for space to space relay. And in 1981 it went Q-R-T.

It's unexpected return came on June 21st when Pat Gowan, G3IOR, in the U-K happened across the slow speed Morse telemetry. It was then monitored by a number of other satellite enthusiasts around the world.

Why is the long dormant bird suddenly returning to life? According to the old HR Report newsletter, the battery failure in 1981 was probably a short circuit. Now, two decades and numerous charge cycles of sunlight later, the short circuit is clearing.

That theory is born out to a great extent by former AO-7 Project Manager Jan King, W3GEY. According to a quote from King on the AMSAT website, the power management levels shown in the telemetry indicate an anomaly. He says that the battery voltage telemetry shows a voltage of 13.9 volts. Normal is 13.6 to 15.1 volts. So that would suggest the battery was normal but, the half battery voltage is measuring only 5.8 volts. In other words, a dead but open circuit battery pack. This leads to speculation that the satellite is operating directly off of its solar battery array and is active only when in sunlight.

But before you decide to try operating on the old bird, AMSAT has this warning. AO-7 listens on 432.1MHz. Due to changes in Amateur Service and Amateur Satellite Service there are questions as to legality of Amateurs transmitting to the bird. This is because the uplink frequency predates the WARC '79 allocation of 435 to 438 MHz by the International Telecommunications Union for the Amateur Satellite Service.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, in New Orleans. Roy.

--

To elaborate a bit more on why it might be a bad idea to try and use AO-7. The uplink frequency falls in the current 70 centimeter weak signal segment in all three I-T-U Regions. Because of this, it would appear that anyone trying to access the uplink is operating outside the Amateur Satellite Service rules and regulations. (AMSAT-NA)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Twin City Amateur Radio Club Net serving Champaign and Urbana Illinois.

(5 sec pause here)

**

ON THE AIR: FIELD DAY WAS KIDS DAY

Field Day 2002 may also have been the third Kids Day operating event of 2002. This as youngsters across the North America took to the airwaves using the new GOTA or Get On The Air stations. Amateur Radio Newsline visited the Santa Clarita Amateur Radio Club as it put a bunch of visiting youngsters on the air: Take a listen:

--
Contact Audio
--

The new Get On The Air stations have replaced the old Novice stations at most Field Day sites. And, if this year is an indication of the future the Get On The Air is here to stay. (ARNewsline)

**

ENFORCEMENT: MINNESOTA SUSPENSION FOR REPEATER INTERFERENCE

A Minnesota ham will be off the air for a while. This based on allegations of interference to a two meter repeater. The FCC's Riley Hollingsworth, K4ZDH, explains why:

--
We issued a warning letter regarding repeater interference to Michael Priest, KB0KMJ, of Deluth Minnesota. The interference was to the Arrowhead Amateur Radio Club repeater on 146.94 MHz. Priest has responded to our letter and has accepted a three year suspension of all Amateur Radio privileges.
--

The interference Hollingsworth referred to occurred on numerous occasions between January 2 and April 4 of this year. Priest's license suspension remains in effect until midnight on May 15th, 2005. (FCC, RAIN)

**

ENFORCEMENT:

The FCC is also looking at a V-E testing session in Tennessee where a pair of Volunteer Examiners allegedly administered Amateur Radio exams to close relatives. FCC Part 97 rules prohibits a V-E from administering an examination to a spouse or other specified relative. The purpose of the rule is to help insure the integrity of the volunteer testing process. Again the

FCC's Riley Hollingsworth, K4ZDH:

--
Hollingsworth: "We sent inquiries to two VE's regarding apparent testing irregularities. We need information as to why Bobby A. Raymer, N2BR, administered an Amateur Radio exam to his wife and signed-off as a VE.

And we want to know why Steven G. Hunter, KF4FAV, administered a radio exam to his brother Gary E. Hunter."
--

Both of these incidents occurred at a December 1999 ARRL sponsored V-E session in Cookville, Tennessee. Hollingsworth says that Raymer has replied and that response is under review. (FCC, RAIN)

**

ENFORCEMENT: DON'T OPERATE ON CB

Five hams have been accused of operating Amateur radio-transmitting equipment without a license on 27.585 MHz and other frequencies near the 11 meter Class D Citizens band allocation. The agency says that operating radio transmitting equipment without a license for a specific service is a violation of Section 301 of the Communications Act.

The FCC says that it is important for hams to understand that violations on frequencies other than the ones they use as Amateurs can jeopardize their licenses and could subject them to other penalties. In this case, the five were warned that they could face fines or imprisonment, as well as seizure of radio transmitting equipment. Fines normally range from $7,500 to $10,000. (FCC)

**

CONFERENCES AND CONVENTIONS: CHANGES FOR HAMVENTION 2003

Jim Trangenstein, KB8OUO has been named as the General Chairman for the 2003 Dayton Hamvention. Trangenstein, who has already served at Assistant General Chairman replaces Jim Graver, KB8PSO, who held the top post for the past three years.

Also departing from the Hamvention team is longtime Forums Chairman Jim Ebner, N8JE. Ebner and his wife plan to leave the Dayton area and relocate to North Carolina. In his parting e-mail, N8JE told his many friends that he has truly enjoyed working with them for the past fourteen years.

And two final items before we move on. According to a note from outgoing General Chairman Jim Graver, the official attendance figure for Hamvention 2002 is 24,832. Also, Hamvention 2003 is slated for next May 16th, 17th and 18th. More information is in cyberspace at www.hamvention.org. (KB8PSO, N8JE, DARA)

**

CONFERENCES AND CONVENTIONS: AMSAT IN TEXAS IN NOVEMBER

The 20th Space Symposium and AMSAT-NA annual conference is scheduled for November 7th to the 11th in Fort Worth, Texas. The event will chronicle recent and future Amateur Radio satellite technology developments. AMSAT Members are welcome to attend the AMSAT Board of Directors Meeting on November 10th and 11th. The Chair for the 2002 event is Keith Pugh W5IU. (ANS)

**

HAM RADIO POLITICS: NFCC ELECTION CORRECTION

Dick Isley, W9GIG advises that we have an error in last weeks report regarding the election at the National Frequency Coordinators Council. Dick says that the election for the three National Frequency Coordination Board positions starts on July 9th and ends on July 28th. We typoed the election as starting on 28 and the announcement of whose elected made on the 31st. As Isley pointed out, it would be very hard to get all the ballots in and tallied in only three days. (W9GIG)

SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

Ladies and gentlemen, with a report on the financial condition of Amateur Radio Newsline, here is its Treasurer and Support Fund administrator, Andy Jarema, N6TCQ:

--
Most of the time, I try to keep these reports as light hearted as I can. This time I have to be very serious. The reason: There is no money in our account to pay outstanding bills.

Here are the numbers. In the account is about $250. In my hand -- right here -- are bills for the months of April and May totaling close to $1600.

Do the math yourself. That's a $1350 deficit, and this does not take into account the month of June that is quickly coming to an end. You can add another $800 to $1000 there. And, put in another $900 to cover Amateur Radio Newsline's part of the upcoming Young Ham of the Year Award in August.

As you know, I am the guy who writes the checks. I am also the one with the power to pull the plug. To take Amateur Radio Newsline off the phones, off the Internet and off of your radio. I don't want to do that, and I am trying not to. But if the dollars run out and none come in to replace them, I will have no other alternative. And right now, there are no dollars coming in.

As the song in the Broadway show Cabaret says. it is money that makes the world go around. In the case of Amateur Radio Newsline, it takes about $1000 a month on average to keep it going. And we need your help right now -- today

-- to keep it from disappearing from the airwaves.

Remember, the Amateur Radio Newsline is a federal 501 C 3 tax exempt corporation. Your donations to it are tax deductible. The address to send your assistance is the Newsline Support Fund, Post Office Box 660937, Arcadia California. Our Zipcode is 91066.

As always, we thank you in advance for your support.

I'm Andy Jarema, N6TCQ

--

If you missed the address for the Newsline Support Fund it will be repeated at the end of this weeks report.

**

EMERGING TECHNOLOGY: LEARNING LONG DISTANCE

The United States House of Representatives has voted to make it easier for students to take classes over the Internet. This, by relaxing restrictions on correspondence courses.

Supporters of the bill, which passed 354-70, said it would expand educational opportunities for people who cannot take courses in traditional classroom settings. The bill allows some schools to offer more than half their classes by telecommunication. It also cuts the number of instructional hours nontraditional programs must offer each week to be in line with the requirement for traditional classes. Nontraditional programs - such as distance learning courses - must offer at least 12 hours of instruction each week, while traditional programs have to provide one day of instruction.

A companion bill introduced by Wyoming's Mike Enzi is pending in the Senate. (Published news reports)

**

SPACE AND SCIENCE: NEW ANS CO-EDITORS

AMSAT North America has announced the appointment of Joanne Maenpaa, WB9JEJ and Harrison Faust WW4HF are the new co-editors of the weekly Amsat News Service. Both have extensive experience as Editors of Technical publications.

And with the change in Editors the AMSAT News Service will begin a metamorphosis of its own. Beginning with the June 16th issue, the e-letter was split the actual news section from the satellite report for a trial period. Both sections will be made available to subscribers but as separate e-mail delivered bulletins. (ANS)

**

SPECTRUM REALLOCATION: AMATEUR BANDS RETURNED TO HAMS IN PANAMA

Some good news for ham radio operators in Panama. They are getting some spectrum that was reallocated away returned for their use once again.

Two years ago the Panamanian government issued a revised frequency allocation plan which removed. It 30 meters and several UHF and microwave bands from the amateur service there.

Now, the ARRL Letter reports that an effort to reverse the changes spearheaded by the Radio Club of Panama has been successful. The Panamanian government has now reportedly agreed to restore all previous amateur allocations except for those in the 902 to 928 MHz band. (ARRL)

**

INTERNATIONAL - NETHERLANDS: DIGITAL RADIO ON SHORTWAVE

Media Network reports that Netherlands Digital Radio Mondiale is now testing from Bonaie at 21:30 to 23:25 UTC Bonaire is on 15.520 MHz in simulcast mode. That is analog and digital signals are on the same frequency at the same time.

The simulcast frequency as specified is the center frequency of the digital signal which actually ranges from 15.515 to 15.525 MHz. The analog is from 15.525 to 15.530 MHz with the analog carrier is located at 15.530 MHz, hence an analog tuner should be tuned to 15.530 MHz in order to receive the signal. You'll find the full updated schedule of DRM tests from Bonaire at http://www.rnw.nl/realradio/html/drm_latest.html. (Media Network)

**

INTERNATIONAL-CANADA: RAC DIRECTORS APPOINTED

Radio Amateurs of Canada's Board of Directors has approved the appointment of Bjarne Madsen, VE5FX and D. Howard Dickson, VE1DHD, as Directors for the Midwest and Atlantic Regions respectively. These appointments are effective immediately filling unexpired terms to December 31st of two directors who had previously resigned. (RAC)

**

DX

In DX, HB9DRD who is also G4KLX advises that there will be a Leichtenstein satellite expedition on July 13th and 14th. Jonathan and his partner Achim, DH2VA, will operate 50 KHz below the AO-40 beacon so as to stay out of the way of normal QSO's. Their Uplink will be on U-band and if signals get to weak they may change to CW operation. (VHF Reflector)

And Herb Spoonts, W3IWI, reports that the CY9 party is en-route to St. Paul Island. Operation will commence shortly and continue through July 7th. Look for them on several bands including 6 and 2 meter Meteor Scatter using standard sequenced WSJT. (W3IWI)

On HF, F6CTL is in French Polynesia and on the air until the 15th of July. He also plans to visit Rurutu and Tubuai in the Austral islands. These islands count as OC-050 and OC-152 respectively for the Islands on the Air Award program. (RSGB)

**

THAT FINAL ITEM: THE FUTURE OF DIGITAL TV: PART 2

And finally this week, we continue our look at digital digital television today and where it is going. This week, DX Audio Service Editor Fred Vobbe, W8HDU, teells you how you can receive digital television and the hardware thats available to do the job:

--
THIS IS AN AUDIO ONLY REPORT. To hear it, go to www.arnewsline.org and download the MP3 audio version.
--

Fred will be back next week with a look at the spectrum that digital television is supposed to use and how its actually using it. (NRCDXAS)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the D-X Audio Service, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

And now with the CARP rules in place, it is going to cost a LOT more and it will be much harder to do.

That rustling you hear is the sound of all the small netcasting operations throwing in the towel because they cannot even begin to pay the new royalties.

The big boys, like Yahoo, put this all in place to keep those nasty small competitors out. Yes, they have to pay, too...but they are paying a whole lot less than they would have if the fees were based on revenues.

The media is in the hands of big companies...and they intend to keep it that way.

The Newsline Production Team

==========

Amateur Radio Newsline report number 1296 with a release date of Friday, June 21st 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams down-under face tough new human exposure to R-F regulations and the FCC creates a new Spectrum Policy Taskforce. These stories are first on Amateur Radio Newsline report number 1297 coming your way right now.

(Billboard Cart Here)

**

REGULATORY: VK HAMS FACE NEW MANDATORY RF EXPOSURE LIMITS

Hams in Australia are about to face some of the toughest electromagnetic exposure regulation found anywhere in the world. The idea is to protect people from R-F. Q-News Graham Kemp, VK4BB, has the details:

--
All Australian radio amateurs will be required to know about new Electromagnetic Radiation or EMR controls which are expected to be included in amateur station license conditions from 1 July, 2002. Compliance Level 1 applies to transmitters that are covered by either of these conditions:

(a) The total average power fed to all antennas at the site must not exceed 100 watts and antennas must be out of reach.

(b) The bottom of the lowest antenna must be at least 10 meters above ground and the average EIRP does not exceed 3200 watts.

Compliance Level 2 requires measurements and documented proof of compliance, applies to all other transmitters.

EMR in licence conditions It is proposed that the new regulatory framework, to be reflected in the Licence Condition Determinations -- LCDs -- for the Amateur Service and to all apparatus license will begin on 1 July, 2002. That means that amateur stations operated under new amateur license issued on or after that date, must comply with the framework.

>From Q-News Australia, Im Graham Kemp. VK4BB, reporting for the Amateur Radio Newsline.

--

And what about current Australian licensees? They will have until October 1st to bring their stations into compliance with the new R-F exposure rules. (Q-News)

**

REGULATORY: FCC INVITES COMMENTS ON NEW HAM BAND PROPOSAL

Back on this side of the Pacific our FCC is seeking public comments on a proposal to create two new amateur bands and to upgrade the Amateur Service to that of primary user in the vicinity of 2.4 GHz. An ARRL Bulletin says that if the proposal is approved, amateurs would gain a new, secondary, US-only High Frequency allocation at 5.25 to 5.40 MHz and a new Low Frequency spectral parcel from 135.7 to 137.8 kHz.

The 5 MHz band would be the first new HF allocation since the early 1980s, when amateurs got 30, 17 and 12 meters. The Low Frequency band would be the first ever for US hams. And most important for the long-term future of ham radio U-H-F exploration, the proposal will also elevate Amateur Radio from secondary to primary status in the 2400 to 2402 MHz band.

All of this is contained in a Notice of Proposed Rule Making titled ET Docket 02-98 adopted May 2nd by the FCC. Comments are due July 29, and reply comments are due no later than August 12th. Interested parties can file using the FCC's Electronic Comment Filing System. That U-R-L is http://www.fcc.gov/e-file/ecfs.html . Click on ''Search for Filed Comments'' and enter ''02-98'' in the ''Proceeding'' field. (ARRL)

**

REGULATORY: FCC CREATES SPECTRUM POLICY TASK FORCE

Ham radio is not the only area where the FCC has been active in looking at spectrum usage. In fact the agency has announced the creation of a Spectrum Policy Task Force or S.P.T.F. to tackle the problems arising from an increasing demand for spectrum.

The task force is headed by Dr. Paul Kolodzy. Dr. Kolodzy is the Senior Spectrum Policy Advisor for the FCCs Office of Engineering and Technology.

The rest of the committee will be made up of attorneys, economists and even engineers. Its not known whether or not a representative of Amateur Radio or any other personal radio service such as FRS, CB or the new Multi-Use Radio Service will be invited on.

You can find out the complete at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-223142A1.doc (FCC)

**

REGULATORY: WRC 2003 IS ON AGAIN

The on again and off again 2003 World Radiocommunications conference appears to be on again. According to news reports, the conference which was canceled by Venezuelas telecommunications bureau has been moved to Geneva Switzerland. The dates are the same -- July and August of 2003. The future of mandatory Morse code testing in the Amateur Radio Service is one of the items on the agenda for that meeting. (Published reports)

**

REGULATORY: FCC SAYS NO TO MANDATORY EMP STANDARDS

The FCC has dismissed a petition for rule making that would have required all electronic equipment under its jurisdiction to be shielded against electromagnetic pulse or E-M-P damage. Amateur Radio Newslines Henry Feinberg, K2SSQ, has more:

--

The petition, filed last fall by Don Schellhardt and Nickolas Leggett, N3NL was put on public notice in December and designated as RM-10330. According to the ARRL Letter the proposals would have applied to both new and existing equipment falling within the FCCs purview. And yes: It would have included some Amateur Radio equipment.

Schellhardt is a Connecticut attorney. Leggett is a Washington, D.C. technical consultant. In 1986 the two filed a similar petition with the FCC seeking a Notice of Inquiry on possible shielding of electronics against EMP. They say the September 11th terrorist attacks motivated them to approach the FCC on the topic once again. Once again, the FCC did not agree.

For the Amateur Radio Newsline, Im Henry Feinberg, K2SSQ.
--

The ARRL did not comment on the proposal but fourteen others did. And they were almost unanimous in asking that the petition be dismissed. (ARRL)

**

REGULATORY: FCC-NCVEC MEETING AGENDA ANNOUNCED

The National Conference of Volunteer Examination Coordinators has released the agenda for its annual meeting with the FCC. Among the topics to be discussed are the effect of restructuring on Amateur Radio testing, a report on the status of testing in sparsely populated areas and the status of regulatory and enforcement matters. The gathering is slated for Friday, July 26th in Gettysburg Pennsylvania. (NCVEC)

**

ENFORCEMENT: FINE ISSUED TO BROADCASTER FOR ALLEGED LANGUAGE VIOLATION

The FCC has issued a notice of forfeiture to Infinity Broadcasting Incorporated in the amount of $21,000. The agency says that it is imposing the fine after it concluded that Infinity is apparently liable for the penalty for willfully and repeatedly broadcasting indecent language on three occasions. Infinity is expected to appeal the forfeiture order. (FCC)

**

ENFORCEMENT: FLIPPO IS TRIED IN WEST PALM BEACH

A non-ham who allegedly jammed ham radio communications has been convicted in West Palm Beach Florida on charges of operating a radio transmitter without a license. We have this report.

--
A federal jury in Florida took less than two hours to convict a Jupiter Farms man of broadcasting without a license and maliciously jamming ham radio operations in northern Palm Beach County. According to the Palm Beach Post, 60 year old William Flippo sat with head bowed and eyes closed as court deputy James Caldwell read out eight counts of "guilty."

But getting to this verdict took years of investigation by local hams and the FCC along with a trial that lasted 6 1/2 days. It was described by the newspaper as an often bizarre trial that included testimony about mysterious jamming devices found in trees, strange events going back to Hurricane Andrew and a forged letter that surfaced at the last minute.

Flippos conviction caps years of conflict between him and the Jupiter-Tequesta Repeater Group. This is a 70-member Amateur Radio club whose members claimed that Flippo had jammed their transmissions and had made threats against them.

So club members complained to the Federal Communications Commission. An FCC Engineer involved in the investigation testified that he had tracked the interference to Flippo's home and two of his vehicles. Club members said that the interference stopped when Flippo was arrested in July 2000.

By way of defense, Flippo maintained that most of the radio equipment found in his home, in three of his vehicles and filling a 24-by-24-foot building behind

his house belonged to other people. He also asserted that some of it was given to him by Palm Beach County for emergency use after Hurricane Andrew in 1992 and other gear was part of a vintage radio collection.

Flippo also claimed to have a letter, written in 1994 by the emergency coordinator for amateur radio operators in Palm Beach County, authorizing him to test his emergency equipment daily. But the alleged author of the letter, Charles Mulligan, testified that it was a forgery. Mulligan believed it was created from a 1992 letter to Flippo dealing with events surrounding Hurricane Andrew.

And this is where it got even stranger. Halfway through the trial, U.S. District Judge Daniel Hurley took the extraordinary step of revoking Flippos bail. This, even though the charges were all misdemeanors. Hurley ordered Flippo into custody, saying that the defendant was trying to sabotage the trial by feigning illness. Flippo had checked into a hospital, claiming symptoms of a stroke, which delayed the trial for two days.

After the verdict, Judge Hurley ordered Flippo to remain in custody until sentencing and to undergo psychological testing. The judge said he was deeply concerned about the escalating cycle of violence in the case. He singled out an incident in which Flippo rammed into a vehicle owned by club member Ed Petzolt, K1LNC. The judge also questioned whether Flippo had perjured himself by repeatedly denying he ever used amateur radio frequencies.

When he is sentenced, Flippo faces a maximum of 8 years in a Federal prison and an $80,000 fine. This is in addition to an earlier 20,000 fine levied against him back in 1999 for unlicensed operation and other violations of the FCCs rules.

For the Amateur Radio Newsline, Im Don Wilbanks, KC5MFA. Norm.

HAM RADIO POLITICS: I LINK VS. ECHOLINK ROUND 1

Politics appears to be starting to play a part Internet based radio linking. According to Lee Williams, N3APP, a ham considered as being the father of i-Link named Graeme Barnes, M0SCH, has locked out all users running the EchoLink software from his servers. Also, i-Link users have had to download new software to stay on-line.

To counter the eviction, EchoLink proponent Jonathan Taylor, K1RFD, has set up new servers to allow users of that software to have connectivity. At least for those who want it.

Williams says that Barnes and Taylor are cooperating on the connectivity issue but caught in the middle are thousands of hams who do not care which program is in their computer. All they want to do is to talk to one another and they

really do not care whose server system their signal is routed through. (N3APP)

**

HAM RADIO POLITICS: ELECTION TIME AT THE NFCC-NFCB

Its election time at the National Frequency Coordinators Council or NFCC. Nominations to fill the seats of expiring National Frequency Coordinators Board Directors opened on June 15th. The closing date for candidate nomination is June 30th., with voting beginning on July 28th. and the election results announced on July 31st. The directors elected this time shall take office effective on the 1st. of September and will serve for two years. The incumbent directors whose terms expire on August 31st are Dave Baughn, KX4I, Dick Isely, W9GIG and Owen Wormser, K6LEW. (ARNewsline)

SPACE TECHNOLOGY: SEEING THE SOLAR ECLIPSE WITH MICROWAVE EYES

The June 10th partial solar eclipse attracted quite a bit of attention because the event could easily be seen. However, the sun is also a powerful source of microwave signals, so the eclipse should have been visible in the radio spectrum as well. And thanks to the efforts of Dr. Brian L. Dougherty of Caltech we now have graphs of the solar microwave eclipse.

Dr. Dougherty operates a microwave dish in Californias Owens Valley. That antenna is tied to receivers that records the radio spectrum of the sun every 9.6 seconds, covering roughly 100 frequencies between 1 and 18 GHz. With a bit of data processing, we are all able to see the eclipse in the microwave region your own eyes at http://srbl.caltech.edu/020610.html

There is also a real time Solar Radio Burst Locator during the day to see the sun's microwave events as they take place. Its in cyberspace at http://srbl.caltech.edu. (CGC Communicator)

**

EMERGING TECHNOLOGY: DIGITAL TV ANTI-PIRACY DEADLINE

July 15th. is the deadline set by Representative Billy Tauzin for the Hollywood studios, the computer industry and consumer electronics manufacturers to develop a method to protect digital TV from being pirated onto the Internet. The chairman of the influential House Commerce Committee is growing impatient over the stalled transition to digital TV. He also knows that the switch won't happen until movies and popular TV series can be protected from exposure to cyberspace piracy. If private negotiations fail, Tauzin says that he is prepared to step in and mandate government intervention. (Published news reports)

**

INTERNATIONAL - CONTESTS: CHANGE IN THE ITALIAN WRTC2002 TEAM

The 2002 World Radiosport Team Championship committee has announced a change to the team being sent by Italy. According to Ari Korhonen, OH1EH, Fabio Schettino I4UFH, has replaced Maurizio Panicara, I4JMY on Team Italy. Schettino will operate with Stefano Brioschi, IK2QEI, in next summers games. (WRC 2003 Release)

DX

D-X, a Y-L mini DX-pedition to Nauru planned for October has been dealt a major blow by officials. VK4SJ tells Q-NEWS they are not going to C21 because the Australian Government has commandeered all rooms in the only two hotels on the island. Without accommodations they can not get a Visa to stay on the island.

But thats not all! The group has been put to an additional expense as well as suffering cancellation fees for something completely beyond their control. It seems that their travel Insurance has an out in the contract. It come under the clause of government intervention. The government says no and that lets the insurance company off the hook. (Q-News)

Also, a reminder that as of the end of June the cost of mailing a postcard or Q-S-L card domestically will go from 21 cents to 23 cents. Also, a domestic first class letter of up to one ounce will cost 37 cents. The increased rates will also affect your credits at incoming QSL bureaus, plus the cost of mailing magazines such as CQ, Worldradio, 73 and QST -- to name only a few. (CQ)

**

THAT FINAL ITEM: THE FUTURE OF DIGITAL TV: PART 1

And finally this week, while the entertainment industry is concerned about digital piracy of its products, the public is wondering where digital television is today and where it is really going. One of those asking is a listener to the D-X Audio Service named Victor Schmidt. He wrote to Editor and host Fred Vobbe, W8HDU, for some answers. Here is part one of W8HDUs reply as it originally aired on the May 2002 edition of the DX Audio Service magazine:

--
THIS IS AN AUDIO ONLY REPORT. To hear it, go to www.arnewsline.org and download the MP3 audio version.
--

Fred will be back next week with a look at the kinds of television receivers now in stores, those that go into your personal computer and what the future has in store. Be sure to tune in. (NRCDXAS)

My bad! "By 1955, all but two states -- Minnesota and Wisconsin -- had repealed their laws prohibiting the manufacture or sale of colored margarine. Wisconsin became the last state to do so, in 1967." http://www.nationofcowards.net/butterormargarine.html

I must admit that I often "borrowed" (yellow) margarine when I visited my folks, who would buy it by the 24# cases and get it much cheaper in Illinois.

Butter is artificially colored also with carotene food coloring. It's possible there were some "white" margarine around. I also made my own "white" butter from cream. I think a web search of the dumping of the law will come up with something 1950ish. I graduated from high school in 1961 and lived on my own then. I remember eating yellow margarine.

2080. Remote radio coverage (2500KMs) using mp3 - Can this be done?

Newsgroup: rec.radio.broadcasting
Date: 2002-07-02 12:28:46 UTC
From: costageorge@hotmail.com
Message-ID: <afs69u$9hp$1@xuxa.iecc.com>

Re: Remote radio coverage (2500KMs) using mp3 - Can this be done?

Hello,

Can anyone help?

I've been asked by a community radio statio if it is possible to extend their coverage to another state (2500KMs away) on minimal budget.

I am a electronics technician with knowledge of PCs.

My initial thoughts are to use 2 PCs some sort of network connection and mp3 encoding/decoding. The quality of audio is not critical so the bit rate demands are probably reasonable, maybe suitable for ISDN or ADSL.

The problems I foresee are the remote PC needing maintenance/rebooting, I dont think anyone (PC literate) would be readily available out there. So it would be ideal if the remote site was some sort of hardware DSP device that took in an stream (mp3) and gave out analogue audio (magic black box).

Does anyone know of a dedicated device that can do this, connect to ISDN or ADSL, and produce analogue audio out given a mp3 stream?

Thankyou,

George Costa

2085. "Clear Channel" in the UK?

Newsgroup: rec.radio.broadcasting
Date: 2002-07-03 21:14:37 UTC
From: Mike Terry <miketerry@ukrivals.net>
Message-ID: <afvpft$2qd$1@xuxa.iecc.com>
Source record: 10497

In the UK:

John Cassy
Tuesday July 2, 2002
The Guardian

The chief executive of US company Clear Channel, the world's biggest operator in the radio sector, last night admitted he would like to take over one of the UK's major groups.

His comments are likely to reignite speculation that the Clear Channel is preparing a bid for Capital Radio or Emap.

"Nothing would give me greater pleasure than to be able to bring one of the leading UK radio groups into the Clear Channel family," Lowry Mays told an audience of industry leaders at the Radio Academy's festival in Cambridge. "It would benefit from what we know about radio and by association with the other legs of our out-of-home strategy, that is: live entertainment and outdoor.

"Clear Channel is not a hostile acquirer, so don't expect to find me camping on your doorstep. When you are ready to create synergy, call us."

Analysts say the group is seen as one of the most likely candidates to take advantage of proposals in the government's communications bill that would allow foreign firms to take over UK media assets.

However, some industry watchers believe Clear Channel's short-term ambitions could be thwarted until the bill becomes law and the group pays down some of its several billion dollars of debt.

Mr Mays spoke to the festival as the radio sector prepares to launch a widespread marketing campaign promoting the benefits of digital radio.

The chances of the medium becoming a common feature in kitchens and living rooms around the country received a significant boost yesterday, with the launch of the first mass market, £99 set.

The first sets will go on sale at the John Lewis store in Oxford Street, London, later this month, with thousands more being delivered to chains including Allders, Argos and Maplin Electronics throughout Europe.

The radio industry is hopeful the widespread availability of "cheap" sets manufactured by niche retailer VideoLogic will lead to mass take-up of a technology that has so far disappointed many analysts.

The Digital Radio Development Bureau, or DRDB, says 68,000 digital radios have been sold in the UK so far and predicts a further 50,000 sales by the

end of the year.
"The introduction of the £99 kitchen-style digital radio heralds the start
of the most exciting development since the launch of the transistor
wireless, and provides a gateway to new volume business for the radio of the
21st century," said Ian Dickens, the chief executive of DRDB.

A high profile on-air marketing campaign will support the launch of the £99
set as the industry attempts to improve awareness of a product which offers
better sound quality and dozens more channels than standard analogue sets.
The BBC, Capital Radio, Classic FM owner GWR, Emap and UBC Media are among
the providers and broadcasters promoting awareness of the advantages of
digital receivers

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

This one can be best classified as "nice try, but no soap." There is at least one current streaming company, Stream Audio/ChainCast, that has been using PTP technology for almost a year...and it was the source of never-ending problems while my company used them. It required users to download software to turn their computers into servers, which many people philosophically object to, which many corporate firewalls won't let through, and which many older computers can't handle without grinding all other running processes to a halt, due to resource limitations. Also, many ISP's prohibit their users from running servers without special permission and increased cost.

Further, PTP in no way immunizes the streaming sender from the CARP fees, which are based on how many people are listening to the stream...not where they got it from.

Back to the drawing board...

>>When you are ready to create synergy, call us."

Oh, hahahahaaa!

That's rich. Clear Channel ALWAYS assures employees it won't fire them, it's just a friendly takeover. Sometimes that works for two whole weeks.

And shouldn't there be a death penalty for using "synergy" in a news release?

A wise old CEO (had a engineering background) once told me that he saw the bean counters taking the business over, with no real understanding of the business, other than the marketing of it and the sale of commercial time; He felt in the end they would lose the battle and put their companies into bankruptcy. He then felt that people who love the medium would pick up the pieces and get it going again.

Always watch the accounting, Enron, Global Crossing, K mart, etc. may have some broadcasting companies joining their ranks.

Just because someone was a great salesman/marketing manager doesn't mean they know squat about broadcasting, but that's where they pick the managers. They may also not understand the concepts of "Fun" and "entertainment".

Clear Channel programming is not in the hands of general managers or sales managers. The programming is an independent hierarchy with experienced radio and television pros at the helm. I'm not passing any judgment on the job they happen to be doing per se, but asserting that some bean counters are in charge of the air sound at Clear Channel stations is just plain wrong.

Not only that, ChainCast does NOT shield the originator from detection. The
chain is controlled dynamically by a single host that keeps full track of
the instantaneous topology of the stream, its source, and all the branches
of the distribution tree.

The Radio Crazy is back! Part interest in 1 KW fulltime AM near Huntsville, Alabama.

Only $150,000 total consideration with low down. Joint venture. Active or inactive with at least $10,000 each are welcome. All investors would be on the board with full voting rights. (The deal for the Guthrie, OK AM has all but collapsed!)

Please email or call anytime: (478) 741-1710 in Macon, GA.

The Radio Crazy is a semi-retired broadcast engineer. Not THAT loco as I was Chief Engineer for a 5 KW fulltime AM in NYC! LOL!

The AM of interest is in a city of over 50,000 population and has been on the air since the middle 50s of the last millenium!

73,

Meyer Gottesman, W6GIV

Would you agree that the budgets these experienced pros have to work
within are dictated by a management that either takes their cues from
the bean counters or are bean counters themselves?

There is clearly a delicate balancing act that the management of CCU's radio division must perform between the financial requirements of their bosses, the Mayses, and the quality of their product. I would surmise that, as CCU becomes involved in more and more businesses, the point of balance becomes more and more difficult to find (and it's a legitimate argument to say that they have already lost it).

However, there is also a legitimate argument to be made that the alternatives would be much worse. At least the management of Clear Channel Radio is still passionate about radio as a business,[1] with a future. Can you imagine what Clear Channel would be like if it were all about finance, as some people say Viacom already is? Given the regulatory catastrophe that was the Telecom Act, somebody was bound to accumulate a group the size of Clear Channel -- and if that's what we're forced to live with, I'd take the Clear Channel we've got over the ones we might have had. (Which is not to say that I'd invest in or even work for them.)

-GAWollman

[1] I think I can say that on the basis of both personal experience and anecdotal evidence from others. I suspect -- although I don't have any evidence -- that these people wouldn't mind having half as many stations to run, provided the competition was operating in the same environment.

Repeating: all of the people, from the top to the bottom of the programming hierarchy are experienced pros. Programmers hire programmers.

On thing they miss is that programming a station in Florence, SC is quite different from Seattle or Bangor, Maine! They have made huge blunders in this arena! A music rotation of 200 songs in Houston may not work in Rapid City! The "Homogenized" cookie cutter approach will destroy them.

Clear Channel has already made quite an impact on concert experiences through its Bill Graham Presents acquisition ! A KDVS hip-hop dj was at a recent Fillmore gig & holding a drink for a friend who was using the bathroom! Security approached her & tossed her out,for being under 21 & possessing alcohol, despite her explanations! Security also took away her press-pass credentials! Zohn Artman must be spinning in his grave! ...Last Wednesday evening,before the Cranberries San Fran Fox-Warfield show,the serious cutie sitting next to me said one of the side-walk security goons flicked his cigarette on her,then copped a ' tude instead of apologising! When babes are being bullied at BGP shows, Bill Graham must be gyratin' in his grave, also! ... This hipster was hassled last year by security at Roxy Music's Concord Pavillion stopover! Da thug was trying his best to provoke a confrontation! Thang God for previous Arco Arena security experience which diffused da doofis' accusations! ... Clear Channel doesn't believe in strong-arm tactics,eh?

Please note, These put out a FEEELTHY stereo signal that splatters wide beyond the emission limits of a proper FM broadcast signal.

If you buy them, use them for in-house CD adaptors or whatever, but PLEASE don't use them to radiate to the outside world in stereo mode.

Compare and contrast:
Valentine in the Morning. (Clear Channel)
Opie and Anthony. (Viacom/Infinity)

Both of these programs air in Cleveland. Valentine originates in Los Angeles, Dopie and Asshole originate in New York.

Valentine is "syndicated"*, but CC at least does it the right way. Yes, they use voice tracking, and yes, I can see where some people might see that as deceptive, but at least it is a professional-sounding broadcast.

On the other hand, I can tune to Xtreme Radio in the afternoon and hear them play a song or two, during which they cut directly over to a feed in which you can often hear half of the station ID and it's obvious that
you are no longer listening to the same station. The fact that they don't take the few extra steps to make it sound more professional indicates to me that they don't care about their listeners and that the parent company probably just piped in O&A to save a buck or two (to coin a phrase :) - Hello? Cleveland is a Top-25 market and I doubt that there is a shortage of people that would decline work in a city of our size. Lack of talent is probably not an issue here.

Basically, because of crap like what they put on in the afternoon - and although I hate O&A's shtick because it's stupid and obnoxious, "crap" doesn't refer to programming in this case - I refuse to listen to Xtreme at all. This is a shame, because I actually like a decent number of songs that they have on their playlist and would listen to them if they didn't make it so painfully obvious that they are trying to cut corners on the afternoon drive.

Also, back when WNCX (now another Infinity station, but [ironically] owned by Clear Channel when they started as a Stern affiliate) started doing Stern, it was before he hit big nationwide. You could still sometimes hear the positioners, and in fact I recall in the beginning when he would come back from commercials and ID the three stations he originally served - WXRK, WJFK and WYSP. Which was fine at the time. But he stopped doing that, and WXRK stopped running their positioners, when Stern hit big nationwide. So you don't come back from commercials and hear "92.3, K-Rock" anymore. It's not

appropriate for a show broadcast nationwide. K-Rock is a New York station, not the radio equivalent of TBS...

This ends your Daily Rant for July 6th, 2002.

* I know "syndicated" isn't the right word, but I couldn't come up with a more appropriate term.

No, even that isn't exactly true. The San Antonio folks are quite aware of regional differences and tastes. I have actually been present when corporate programmers were advised of local band play (groups that are just not hear anywhere else anymore) and even the avoidance of groups for which the local market has some sort of dislike.

Where, specifically, have they made such a "huge blunder"? What station(s) in Seattle or Bangor were affected? I would suspect that the local people were at fault for not keeping track of local preferences and communicating them back to corporate. At least in Clear Channel, there is definitely a mechanism for regional and local audience preferences.

Well...in the strictest sense, she *was* "possessing alcohol" at the time....

On the other hand, most of the bouncers/security guard/etc. aren't the sharpest tools in the drawer to begin with...whether it's at the concert, in front of the store, at
the airport....

This all sounds more like typical lowlife "security" personnel behavior than
anything specific to Clear Channel. It's true that before Bill's last
helicopter stunt, he had definite decorum rules for his doorkeepers, and those
have (by all reports) slipped a lot.

To blame that on Clear Channel alone is just wishful / vengeful thinking.

Of course the CBS Radio Mystery Theater is not old timew radio. It was produced between 1973 and 1989.

Some of NPR radio theaters are now online on my website. They are mostly radio theaters I produced over the last 20 years, plus a few of my radio documentaries.

You can hear excerpts and buy CDs of them at:

http://www.comedyorama.com/soundforsale/sfs-home.htm

and hear a complete show online for free at:

If she was under 21, security was absolutely 110% correct to do what they did, regardless. She shouldn't be touching alcohol if she is under 21 - at least according to the law. The management at the venue where the concert was held could end up in a lot of trouble if they knowingly allow people under 21 to consume alcohol, and even if she wasn't, I can't say I wouldn't do the same thing in those circumstances. They can't prove for sure she wasn't drinking.

>evening,before the Cranberries San Fran Fox-Warfield show,the serious cutie
>sitting next to me said one of the side-walk security goons flicked his

This has nothing to do with CC - there are security guards with attitudes everywhere.

How so? Radio was starting to "sound the same" long before the trend toward conglomerate ownership began. Say what you want, but in this market Clear Channel has several stations doing unusual formats that are legacy from the earlier days of the stations in question. And Clear Channel isn't the only one: Bonneville acquired a classical station and although they didn't really promise anything up front about how long it would stay that way, they did a credible job of giving it a go...and years later, it is still classical and doing very well.

I have plenty of reasons for not liking the concentration of media ownership, but when we make up stuff to make our points, credibility suffers. If we start attacking conglomerates for the wrong reasons, ultimately our arguments will fall by the wayside and no longer be heard, either by the public in general or by regulators.

For instance, the suit against Clear Channel for monopolizing venues and keeping ticket prices high is pure baloney. Venues don't set ticket prices; the performers do. Next?

You could make that claim about any radio station in existence. Even the family-owned stations in days gone by had outstanding loans to banks. Did the bankers dictate programming or stifle it by withholding money? If not, why? If so, what is the difference between then and now? You can't have it both ways.

> Programmers only hire programmers when they have the money to do so.

That is not a problem at Clear Channel. If they need programming people, they hire programming people, not street-sweepers.

True. So we've replaced programming consultants with corporate programmers. This still makes radio sound the same in every city and does nothing to reverse that trend. Cities have their own personalities - some more than others. Yet on the radio they still all sound about the same.

And I have worked for many such stations. Frequently, it was the station owners who dictated programming. Sometimes that worked and sometimes it didn't. I have also worked for stations that were corporate owned, without debt service. I have never noticed that programming quality was directly related to any of those conditions.

Radio has changed. The way radio is programmed has changed. It's not going back, conglomerates or no.

Does concentration of ownership allow the Gordon McClendons to come out of the woodwork?

At vertically integrated broadcasting companies is thinking only allowed in the corner office?

Is it, as usual, a power thing? Where will innovation and new ideas come from? Once upon a time it came from the "loser" station in the market. The one who had nothing to lose. Now that the loser is owned by a group what happens? Here we just had a AM go dark, it was Top 40, then consulted Top 40 (limited list, liner carded to death and
b o r i n g), then news, now it's off the air but supposed to come back. The company owns 3 others, to my mind when one management has to juggle 4 licenses (or more) it may be too much for them. Does the "head space" and energy need to be focussed like it once was? Are we asking a few radio pros (management) to be all things in all formats? Do the nuances get lost?

Have we returned to "network radio" under a different moniker? I guess the economies of scale make it cheaper to run, but they have to be careful. I remember when pipsqueaks like WKNR Detroit and WIXY Cleveland gave big 50 kW O&O's a run for their money. Can new and different and entertaining happen with focus groups and a corporate "safe" world?

RC

lol.....you work for them or something?

"At least in Clear Channel, there is definitely a
mechanism for regional and local audience preferences."

ya sure whatever you say.

"At least in Clear Channel, there is definitely a
mechanism for regional and local audience preferences."

ya right. all that listener input sure shows.

"At least in Clear Channel, there is definitely a
mechanism for regional and local audience preferences."

oh ya, ClearChannel they sure listen to us "listeners".....(fewer and
fewer everyday BTW).

"At least in Clear Channel, there is definitely a
mechanism for regional and local audience preferences."

sure. ClearChannel is the best!

"At least in Clear Channel, there is definitely a
mechanism for regional and local audience preferences."

sure! I mean, what would radio be like without our fine high quality
programming served to the listeners by our high integrity and classy
ClearChannel.

"At least in Clear Channel, there is definitely a
mechanism for regional and local audience preferences."

Thank God for ClearChannel......boy without them I just don't know what I'd
have to listen to.

"At least in Clear Channel, there is definitely a
mechanism for regional and local audience preferences."

Thank you ClearChannel for all that shock/hate rant stuff.............I
feel much better filled with hate than before you showed me the truth of the
world.

"At least in Clear Channel, there is definitely a
mechanism for regional and local audience preferences."

thank you! thank you! thank you! ClearChannel........for listening to us
listeners.....I can sleep better now ;-)...........;-/

And radio continues to drift away from using its natural advantages, subjecting it more and more to competition in both entertainment and information. The internet, DVD's, x00 channel cable systems, etc. etc. continue to erode radio's share of the entertainment and information market. Even radio's most sacred ground, the automobile, is being invaded by competition. If local radio doesn't sound any different than satellite radio (except for 20 minutes of commercials per hour), then for a lot of people there really won't be any point in listening to radio.

Gordon was an owner with a troubled, then-daytime, AM station in Dallas. He executed with a great flair, but the original Top 40 idea was not his.

> At vertically integrated broadcasting companies is thinking only
allowed
> in the corner office?

Maybe at some. Ot others, programming is as local in design and control as always.

> Is it, as usual, a power thing? Where will innovation and new ideas come
> from?

Generally, only companies with deep pockets have been able to launch new fomrats. For example, MetroMedia with The Wave in LA several decades ago.

> Once upon a time it came from the "loser" station in the market.

Loser stations today are AMs and bad signal FMs. It is relly hard for big gorups to justify owning these stations, so they will alwyas be floaters looking for a good idea.

> The one who had nothing to lose. Now that the loser is owned by a group

Did it have a signal? A true total MSA signal day and night?

Again, at some companies. Definitely not at many others like Cox, Emmis, Saga, HBC, etc.
>
> Have we returned to "network radio" under a different moniker? I guess

> I remember when pipsqueaks like WKNR Detroit and WIXY Cleveland gave big
50
> kW O&O's a run for their money.

WIXY was not a pipsqueak. It came in and competed with WHK, a station with, if anything, a worse signal than the old WDOK (1260, later WIXY). The only O&O was WKYC, which was not a true top 40 at the time. WIXY was more fun than WHK, which by '65 was pretty long in the tooth and ready for a fall. WIXY, in turn, fell to FM CHRs in the 70's.

WKNR, if I recall, did not compete with WJR, which was alwyas an old-line, WGN-like MOR. WKNR was certainly signal challenged, and was generally beaten by CKLW (which was not a network O&O) despite CKLW laboring under the requirements of CanCon at the end.

> Can new and different and entertaining
> happen with focus groups and a corporate "safe" world?

Music is not picked in focus groups; in fact, I don't know of too many stations that use focus groups either at all or as simply a start of some larger perceptual project to get a "lay of the land."

WIXY used research, too. Probably more strictly than stations today do.

The answer to your question is absolutely NO! By their very nature they cannot (it simply is not possible). OTOH, 'Pirates" include the "good, the bad and the ugly"......I've listened to 3 and 2 of those were far better than what I find on CC and ilk.

A huge souless corporation (think McDonalds).............will always end up with ratings areound 3-4 (out of ten).....nothing is total garbage (though to me alot of it is - even if Joe Q thinks it is so-so), but nothing merits high marks either.

The small guy (LPFM/pirate/micro/MaPa (if any left)/etc...), they are the corner Diner/Cafe, they could be like above a 3-4, or even a 0-1 (dog-food/food poisoning) or a 10!!!!!!!!!! (and some are!, those that are can NEVER be bested by the likes of McDonalds!.............)

The nature of the glutton global corp simply cannot allow itself to take the risks involved to be a 10-rating. in fact the folks in position of power cannot allow themselves to think creatively (unless they wish to loose their jobs!).............its all about conservative status quo, with the maximizing of profit with the smallest risk.....result?......well all that equals = POS radio ;-(.

good day

Yes, they do. They even own two major research companies to determine
locallistenr preferences.

> lol.....you work for them or something?

John, one of the industry's bettter engineers, does work for them. He could
work for anyone. Does that tell you something?

Actually, CCU has never had higher audience levels.

> ;-(.

Actually, that reasoning is a product of your belief system. The truth of the matter is that it is the conglomerates that DO have the resources to take risks. Someone that owns two stations is not going to risk one of them trying out cutting edge stuff. A company that owns twelve hundred stations can afford to test some new format ideas on stations here and there...and they do from time to time.

And remember, just because YOU don't like a particular station doesn't mean the station isn't popular and does not have high ratings. Some people don't like Paul Harvey, but that does not diminish the fact that he is legendary and one of the most successful radio commentators of all time.

Your view of radio is painfully narrow. You glorify LPFM operators from an apparent vacuum of ignorance in the field of noncomm broadcasting. And you don't seem to be interested in learning factual information in your dismissal of all my caveats when correcting certain erroneous factual data with regard to Clear Channel. I never listen to Clear Channel stations; they are not my cup of tea by any means. But that doesn't mean that any discussion about the company's practices has to degenerate into an immature morass of mindless witticisms.

If and when you are ever ready to discuss the strengths and weaknesses of corporate radio at an adult level, let me know.

And radio continues to drift away from using its natural advantages,
subjecting it more and more to competition in both entertainment and
information. The internet, DVD's, x00 channel cable systems, etc. etc.
continue to erode radio's share of the entertainment and information
market.
Even radio's most sacred ground, the automobile, is being invaded by
competition. If local radio doesn't sound any different than satellite
radio (except for 20 minutes of commercials per hour), then for a lot of
people there really won't be any point in listening to radio.

And the problem with that is..._what_?

> sure. ClearChannel is the best!

Your comment, not mine.

[remainder of mindless, ignorant, and repetitive comments deleted]

As I said, if your factual information is wrong, you are arguing in a
vacuum. There are a lot of things to be said against Clear Channel, but
apparently you want to stay at a mindless and emotional level...so I guess
you are not capable of discussing them.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been

broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

III.

The possibilities are few, so you might be able to get them again.
1540 Is a Clear Channel assigned to the Bahamas, although there is a 50KW
fulltime station (a class B) in Waterloo, IA.

The only stations broadcasting at night in North America on 1540 are:
KXEL Waterloo, IA (50KW DAN)
CHIN Toronto, ON (50 KW Days, 30 KW Nights DA2)
KZMP Fort Worth, TX (50 KW Days/1KW Nights DA2)
KXPA Bellview, WA (5KW DAN)
KMPC Los Angeles (50 KW Days 10 KW Nights DA2)
KEDA San Antonio, TX (5 KW Days/1 KW Nights DA2)
KGBC Galveston, TX (1KW Days/ 250 Watts Nights DAN)

All others are daytimers and only a couple of them have flea-power nighttime
authorization. It is very remote that a daytimer with small night time
authorization could be heard in Indiana.
KXEL is "news/talk"
CHIN is "International" (whatever that means) and is possibly dark
KMPC is "sports"
KZMP, KXPA and KEDA are all 3 "spanish" programming
KGBC is "classic rock"

There is always a chance that ZNS-1 in Nassau is your station, but I have no
info on their format.
Even though they are the Class A occupant of 1540, they are directional at
night and the contour doesn't favor Indiana.
Perhaps Peter can help.

True but you negate the absulote numers of those folks......you only see the
"one small entity" witht he gutton global corp intity".......In absolute
numbers the small guys would be higher in number of statons accros the
nation and thus statistically more like to experiment.

>A company that owns twelve hundred stations
> can afford to test some new format ideas on stations here and there...and

I like Paul Harvey! the last of the non-hate ranters. He says thing that may be trivial or non-sensational, but he has dignity and respects the medium of radio and understands it is a trust given broadcasters to serve the pupblic. Not some platform to teach HATE, like Beck, Savage, Rush, Libby, Sleshinger, Jones, etc....ad nausium infinitum.....;-(.

I haveno interst in learning a trade which glorifies HATE speech, and plays endless repeats fo crap songs. I could care less about factual info regarding the finacial workings of ClearChannel. I'm a listener not a broadcaster (thank GOD).This listener thinks Radio sucks today......mostly due to ClearChannel and Helecom.................

You broadcaster can think/do whatever the hell you want. All I know is radio is pathetic. Maybe some of you out there know this and remain silent, maybe some know this and feel helpless, and maybe some of you are still simply cluless (fell free to chime in broadcasters).

> I never listen to Clear Channel stations; they

And another wise old CEO with an accounting background once told me
that when the engineers are left to themselves, they'll almost always
run out of money too soon. Let's cut the crap.

Businesses are three legged affairs: You need marketing, you need
accounting, and you need product development. These elements may be
called different things in different businesses, but the fundamentals
are the same. And the Radio programming business falls squarely in to
those parameters. When marketing oversells something, it fails. When
accounting tries to run things based only on cutting costs, it fails.
And when engineering runs rampant trying to eek out too much
performance with no ROI, it fails. The job of management is to
organize these elements so that everyone wins.

So much for management 101. In case you're wondering, I'm an
engineer.

>They may also not understand the concepts of "Fun" and "entertainment".

BINGO! You stumbled on the crux of the problem. It has nothing to do
with production quality, it has nothing to do with management style,
the excess or lack of venture capital, or being funded by bankers
looking for ROI.

The problem is one of innumeracy. You'd be amazed how few people
really understand the art of statistics.

The problem, as I see it, is that radio stations use statistical
feedback in their productions. Over a long term this effort is doomed
to failure. This is why so many educational institutions are finding
the SAT less and less useful. The ubiquity of the exam and the
excessive introspection of this exam is destroying it's utility.

Statistics can be used to evaluate performance, but once they're used
to guide the performance they're evaluating, you reach a problem that
Heisenberg quantified very nicely with the Uncertainty Principle. At
one extreme you can know how popular your overall station programming
is; at the other extreme, you can know how fast certain hits move in

or out of fashion. BUT YOU CAN'T KNOW BOTH WITH GOOD CERTAINTY AT THE SAME TIME BECAUSE THE VERY THING YOU'RE USING TO MEASURE YOUR PERFORMANCE AFFECTS THE THING YOU'RE TRYING TO MEASURE.

Ladies and Gentlemen, IMHO, this is why most radio station programming sounds so bland. They're chasing their tails, trying to find the freshest dog crap. Yes, sometimes it really works. However, these dogs have no idea what's going on where or who's really making it and who isn't.

I have this to say to you program directors: get out of your offices, go to some nightclubs, live performances, talk to people, and most of all, develop a nose for someone else's crap. When you're constantly smelling your own, it stops being so noticeable and becomes a background smell. Understand?

For further details on this concept, I suggest reading an introductory book on quantum mechanics. It's well known among physics students.

Jake Brodsky, mailto:frussle@erols.com

```
|
| Radio has changed. The way radio is programmed has changed. It's not going
| back, conglomerates or no.
```

That is a real shame.. because from this listeners perspective, radio today in the NYC metro area just plain sucks at the 90th percentile.

It could be a matter of semantics, perhaps a little Clintonesque, but to "do work" for someone is not the same thing as being an employee. If semantics is not the problem, then I would think John would have the most accurate information on this issue.

So you DO simply want to bash in a vacuum! This weakens your argument considerably. I would suspect that people who are really concerned about the sorry state of radio today are not terribly enthusiastic about having such a player on their team.

It is always easier to rant when you can avoid people who actually know of what they speak, especially when you are unconcerned about the facts. I understand completely.

>the bankers dictate programming or stifle it by withholding money? If not,
>why? If so, what is the difference between then and now? You can't have it
>both ways.

Until the 1980s, bankers generally did not loan money to radio stations, because the primary asset--the license--was legally only temporary.

When deregulation began, the nature of the license changed. The government began taxing it as an asset, and banks began loaning money. Even if the licensee got in dutch with the commission, the FCC would allow a distress sale.

This was distinctly different from the days when Dr. John Brinkley and Rev. Bob Shuler lost their licenses because of what they said on the air, and never collected a penny for them.

In those days, radio station owners needed to prove financial responsibility without being dependent upon others. Owners like Earle C. Anthony and Don Lee in Los Angeles were rich men with Packard and Cadillac dealerships respectively. Others like Hal Nicols of KFOX had rich partners like Warriner whose names were also on the licenses.

Those who had partners, like KNAC in Long Beach in the 60s when it was owned by International Cities Communications, had trouble keeping programming in the programming department. I worked there in the late 60s, and one of our big problems was keeping the 13 shareholders happy.

Sometimes, like with Jess Grundy of Bateman, Eichler, Hill Richards, you could make him happy by having him do the stock report. Other times, you had to deflect requests to play out-of-format songs from stockholders' wives.

The difference between then and now, is that some individuals took responsibility for their stations, and when listenership started to decline, they spent huge amounts of money bringing in new talent, designing new formats and buying new equipment.

That's something I haven't seen Clear Channel do, at least not down here in South Florida. But you seem like you know more than I do about this, and contend I'm having it both ways.

So, where are all these local people who used to work at the stations in my market now owned by CC? I thought they had been fired, and replaced by tracking done out of Miami and Tampa.

But I guess I'm wrong and CC has been hiring programming people and keeping it a big secret.

The folks I knew who owned radio stations apparently had enough credit and horsepower in the community to easily get credit from banks and other institutions. Not all loans are secured.

I am very much aware of operating and capital budgets for many of the Clear Channel stations, not just the ones in South Florida. Clear Channel is at the cutting edge of automation techniques and program networking. They didn't get there by spending no money. Again, I make no judgment regarding the final product that emanates from all this technology, but to deny that it exists undermines credibility. Oh yes, and it does take some very bright people to make it all work...so someone has been hired and someone is being paid.

You've nailed it, John. I'm completely out of the loop.

I'm at the ass end of Clear Channel, in a small Florida market that
they inherited, primarily, through the meatpacking talents of Bud
Paxson.

I'm so far out of the loop that I can't get one decent FM signal where
I live. So words like "cutting edge" fall kinda flat here.

No, Clear Channel isn't any worse than anybody else. Their distortion
and modulation levels are generally better than the rest. They have
long periods of dead air, but their programming is so lackluster that
sometimes its hard to tell.

And unlike you, I DO make a judgement regarding the final product,
because no matter how much hardware you throw at radio, you need a
spark to make people keep listening.

So even if Clear Channel had a net increase in geeks disguised as
programming people, you're only building support staff for a creative
staff that's not there. Nobody said they've stopped hiring staff;
they're advertising on the air for ad sales people!

Jake Brodsky put it very nicely in statistical terms; the point an
organization is no longer able to identify its own problem.

You disclaim the final product while extolling the machines that make
it. You're hardly in a position to call gaffo's view "narrow."

I'll pass your greetings along to the local programming folks. They will be happy to hear that their decades in this business don't count or that they are not really there.

> You disclaim the final product while extolling the machines that make
> it. You're hardly in a position to call gaffo's view "narrow."

It is narrow. I have a personal opinion of the final product, but it is irrelevant when correcting erroneous factual information. My opinion of a product does not relate to the existence of a mechanism...that local tastes are factored into the mix. That is undeniable fact. Whether it really works in the long run in terms of producing a quality product is beyond the scope of my commentary.

As far as my view is concerned, I've probably worked in more types of radio, especially noncomm, than most people. In fact, I'm walking out the door at this very moment to help the chief engineer do some transmitter work on a local community station that has been serving this region for over thirty years. Oh...and I'm also on the board of directors for that station.

Indeed. Back in those days, radio stations owned valuable office and
transmitter space. It wasn't just rented generic space and a lease from
American Tower Corp.

>risks involved to be a 10-rating.

A "10" rating in what category of performance? There are many, you know.

Anyway, you've got it all wrong again, Gaffo. It's the struggling, little company that can't afford to take risks; too much is depending on what each unit does. It's the big companies that have the size and leverage to do experiments (take risks, as you say). To stick with your fast food analogy, look at how many new products McDonald's has tried over the years. Look at how they experimented with unusual locations (I remember when they had done the "really kooky" thing of placing a McDonald's in the Internation Arrivals concourse at Miami International Airport. Now, you see brand name restaurants of all kinds making money in airports all over the place.)

Look at the success Wendy's has had experimenting with strange, new salads. Look at how Yum! Brands (the former Tricon Global) has experimented with co-locating its brands in single buildings. It's the BIG ones that have the means to try these new things.

> in fact the folks in position of power
>cannot allow themselves to think creatively (unless they wish to loose their
>jobs!)

In every situation I've ever seen or been a part of, *qualified* people who are first doing the jobs that they're there to do have the freedom to think creatively all they want and to bring new ideas to the table. But, note the prerequisites -- qualified and first doing their jobs.

>.............its all about conservative status quo, with the
>maximizing of profit with the smallest
>risk.....................result?......well all that equals = POS radio

First, *prove* that you can maintain the status quo...then, maybe, you'll be able to explore beyond it.

(Note: That's a little bit of a trick. See, once you would learn how to successfully bring a product to market, you'd probably abandon some of your far out beliefs. At that point, by the way, your exploration beyond it would be much more intelligently guided...)

Gaffo to John Higdon:

>Yes the above is indeed my belief.....and the belief of many listeners
>I suspect. (listeners/former listeners feel free to inform those here on
>this forum in the "Biz" that radio sucks now)

Gaffo, you still haven't realized how far out of the mainstream your desires are! Just the fact that you - merely a listener - are on this newsgroup is indicative. The "listeners" you're inviting to jump in would be just as much outside the mainstream as you are. This behavior just isn't typical!

>True but you negate the absulote numers of those folks.....you only see the
>"one small entity" witht he gutton global corp intity".

I have no idea what this means.

>In absolute
>numbers the small guys would be higher in number of statons accros the
>nation and thus statistically more like to experiment.

Not necessarily. I would guess the vast majority of these "small guys" are doing country or something along the CHR-AC spectrum. Also, a good number of them would be Christian broadcasters who own one or two apiece.

>And glutonous corps are corpulently grossly slow
>moving WRT anything

Actually, I'm not sure I've seen anyone in radio able to bring a station to market faster than Clear Channel. (at least semi-intelligently; I've seen a whole bunch of people just throw a station on and hope they'll be able to get it right somewhere down the road)

>I like Paul Harvey! the last of the non-hate ranters.

Gaffo, I've noticed that you define "hate" as conservatism spoken aloud. What's funny about your statement is that Paul Harvey is possibly the most conservative of the whole lot!

>I haveno interst in learning a trade which glorifies HATE speech,

C'mon, Gaffo....I know you're perfectly capable of being a reasoning person. Surely you haven't fallen for this recent liberal use of the word "HATE!"

>This listener thinks Radio sucks today.....mostly
>due to ClearChannel and Helecom.....

You've said that before. We've noted it. Thank you. Now, you have no need to ever post again.

>You broadcaster can think/do whatever the hell you want.

Thank you. We will. We'll continue to ask people what they want and then provide it for them. In doing so, we'll continue to have ~95% be able to make use of us.

>All I know is radio is pathetic.

"Is?" Or "you think that..."

Or, maybe they're having their needs and many of their desires met. Or, maybe they have real lives, live them, and don't try to think in detail about radio. Again, Gaffo, you're *way* outside of the mainstream.

2154. FA: ..Auratone "Sound Cubes"...Ends 90mins..TODAY!!!!

You have the misfortune to be in one of the most over-radio'ed states in the nation--a place where the multiplicity of signals is outrageous. Any area where hitting the "scan" button in a small market brings up a signal on almost every frequency, is an area where radio is in trouble. Investing big bucks in facilities and programming in such places doesn't pay because no matter how good you are, you're lost in the clutter, and you can't attract enough listeners to cover high costs with limited ad dollars. The CCU stations I heard didn't sound any worse than average for that area, and in some cases sounded better--which does not necessarily mean they sounded good.

In fact, during my last trip to Florida, in late May-early June, I found the radio I heard to be appallingly bad, without regard to ownership. Much, much worse than in other parts of the country. The only exceptions were the (barely receivable where I was staying due to adjacent-channel interference) NPR affiliates. There was also an AM in Tampa/St. Pete with terrible audio quality and limited coverage, that seemed to be trying to do some interesting black-oriented programming, but with very mediocre air talent. And that was a highlight!

Hi all. Over several years, I acquired lots of wav files from older incarnations of the w p l j website in New York. These were, in particular, from the Scott and Todd show. Several computers later, and with inadequate backup facilities, I of course lost various parts of my collection. Being formerly from New York, I'd love to reacquire these again. My guess is, lately, that of course these files probably are nor on the site any more. Also, as sites get fancier and more visually appealing, they sure become less accessible to those of us using speech or braille outputs.

Also, while not radio related as such, I'd also like to reacquire wav files that were on the New York Yankees site, featuring the organ playing of Eddie Layton.

If anyone has anything to share, or knows where any of these have ended up or where to find them, please feel free to send along. Much appreciated. Thanks.

In TV we did live to tape, recorded one hour before the actual air time,
very few edits and "quick". (sometimes in a bad sense, no teleprompter etc.)
Perhaps it means the same thing but in a radio sense. So my bet is that it
sounds "live" but actually is taped.

For sale:

Partial interest in fulltime 1 KW AM radio station in Alabama. Near Huntsville. On the air since the middle 50s of the last millenium. (Last century, silly!)

Active or inactive investors with at least $5,000 (Five grand) are welcome.

All investors would be on the board with full voting rights if desired.

Total consideration is $150,000 with $25,000 down. A good deal. City is over 50,000 population.

Tel. (478) 741-1710. No busy signals anymore as I have ADSL Internet access.

I am a semi-retired radio engineer. I was the past President and founder of an FM in San Francisco. Last job in radio was Chief Engineer for a 5 KW fulltime AM in New York City. (2001). I am "diplomat with portfolio" (Sometimes I think I am just "idiot with headache" Hi Hi!)

We have retained an FCC attorney and I will disclose that and the callsign to interested parties.

73,

Meyer Gottesman, W6GIV

> Gaffo, I've noticed that you define "hate" as conservatism spoken aloud.

No I define hate as statements by Glen Beck calling to a nuclear stike on Tehran and Bagdad (they have a term for that "genocide"). Rush is hate. Savage is hate. I would include a Liberal in the mix if I could find one. I have yet to hear a liberal on the radio.

Harvey is Conservative. You know what, so is Geoge Will and Patrick Buchanon (yes I like him, others have a problem with him for some reason). Those men do not PREACH hate, they do not literally foam at the mouth.

Conservativism is not even an issue! Hell haven't you figured out that I'm not a Liberal? I'm am Libertarian - big difference.

I welcome Paul Harvey because he seems like a good person. Savage/Rush/Beck are assholes. I don't like assholes. Time to pull the plug on hate-radio

> What's funny about your statement is that Paul Harvey is possibly the most
> conservative of the whole lot!

Yes...I likeGeorge Will too. In fact Will has some valid points and I listen to his wisdom. I like John MCCain too. Saw him last year, very smart and dynamic man. Seems to have honour too. Unlike
Rush/Liddy/Beck/Savage/Jones/etc...rabid mouth foamers

--
An unjust king asked a devotee what kind of worship is best? He replied:
'For thee the best is to sleep one half of the day so as not to injure the people for a while.'

I saw a tyrant sleeping half the day.
I said: 'This confusion, if sleep removes it, so much the better;
But he whose sleep is better than his wakefulness
Is better dead than leading such a bad life.'

>>The nature of the glutton global corp simply cannot allow itself to take the
>>risks involved to be a 10-rating.

A 10 rating!!!! You need a refresher course in Arbitron. I'm sure you
mean a 10 share. I don't think there has ever been a station in
history to achieve a 10 rating.

A 10 rating would mean 10% of the population was listening. A 10 share
means 10% of those listening to radio are listening. It's a vast
difference.

I'd like to run external speakers from time to time, perhaps 45 minutes at a time ..tops. tia

****

not a yes/no question. How good is your battery, is your car tuned up and easy starting, even the weather has an effect.

If you have a battery charger, experiment a little in your own drive.

You say 45 min would be normal usage, set up car as it would be for this and set a one hour timer. Try starting the car and listen for any abnormalities. If it don't start 'til recharge you can't do this.

If this type of usage is important to you, add a second battery with an isolator. This is a device that lets your car charge the second battery as you drive, but use of the secondary without the car running has no effect on the charge state of the primary battery. Once installed full automatic.

The second battery should be a "deep cycle" battery, one that is designed to operate from full charge to nearly exhausted. Standard car batteries are designed to be operated at or near full charge and to be able to deliver high peak current to the starter in all weather conditions. They are not designed to operate equipment over long periods of time or remain in partial-charged state for long periods.

Amateur Radio Newsline™ Report 1300 July 12, 2002

Celebrating a quarter of a century in service to ham radio, this is Amateur Radio Newsline report number 1300 with a release date of Friday, July 12th 2002. It follows in 5-4-3-2-1.

The following is a Q-S-T. The ham radio Olympics are happening in Finland and a Reading Pennsylvania teen is named Young Ham of the Year here in the United States. Find out who on Amateur Radio Newsline report number 1300 coming your way right now.

(Billboard Cart Here)

**

RADIOSPORTS: THE HAM RADIO OLYMPICS FOR 2002 ARE ON

Its the Super Bowl of ham radio contesting. The 2002 World Radiosport Team Championship games also known as WRTC 2002 have been taking place this week. Jeramy Boot, G4NJH, reports:

--
The World Radiosport Team Championship, sometimes called 'the Olympic Games of Amateur Radio', takes place in Finland between the 9th and 15th of July. WRTC is a competition among 52 two-person teams of the top amateur radio contest operators in the world.

By bringing competitors together in one geographic area and providing equal operating conditions, including antennas and power, the variables normally associated with radio contesting are minimised, and the individual team's operating skills are emphasised. Look for the national teams taking part in next weekend's IARU HF Championship contest from sites in the Helsinki area and using callsigns with the unique OJ1 to OJ8 prefixes.

Jeramy Boot, G4NJH.

--

The contest began at 1200 U-T-C on Saturday the 13th of July, and runs for 24 hours. The WRTC 2002 organizing committee is asking any of you who worked the conterstants to e-mail your logs by 1800 U-T-C on July 14. These "early bird" logs will be used only for log checking purposes related to the WRTC 2002 teams. The e-mail address is logs@wrtc2002.org

Also, Film maker Dave Bell, W6AQ, is in Finland recording the event on digital videotape. Bell produced the popular Ham Radio Olympics video that chronicled the 2000 WRTC games. (WRTC2002, GB2RS, W6AQ)

**

RESCUE RADIO: HAM RADIO AND THE TEXAS FLOODS

On this side of the Atlantic, the Federal Communication Commission declared a general communications emergency Friday July 5th in response to severe flooding in parts of Texas. Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--
Thousands of people were evacuated from three West Texas towns as a massive storm dumped more than a foot of water on an area that rarely sees more than 2 feet a year. This, as rainfall in flood-weary Central Texas continued and flood water surrounded homes in 29 counties.

Statewide,the week of flooding has forced at least 4,000 people to evacuate, killed at least eight people and caused tens of millions of dollars in damage. Its also cut off normal lines of communications to some areas and that’s where ham radio was called in.

On Friday, July 5th, the FCC issued an edict declaring two parcels of spectrum -- one on 40 meters and the other on 75 as off limits to all but those stations handling flood emergency traffic for 72 hours. Those frequencies were 7.285 MHz during daylight hours and 3.873 MHz at night. Amateurs not directly involved in the emergency communications were required to stay at least 3 kHz away from these frequencies until the order is rescinded. The FCC cancelled the order at 1700 UTC on Monday, July 8th. But as we go to air, hams involved in Texas ARES, along with other volunteer groups, are still providing assistance to the flood ravaged areas.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

More on this story as information is made available. (FCC, ARRL Bulletins, Internet postings, other sources)

**

RESCUE RADIO: AZ HAMS STAND DOWN AS WILDFIRE IS CONTAINED

After weeks of battling the largest wildfire in Arizona history, ham radio has stood down and firefighters from around the country are being reassigned to other states or sent home. This, as the half-million acre Rodeo Chedeski blaze was finally contained on Sunday, July 7th. And hams have gone home. Amateur Radio Newsline’s Norm Seeley, KI7UP, in Scottsdale has the rest of the story:

--
SATERN, which by the way stands for "Salvation Army Team Emergency Radio Network was probably the most visible ham radio communications group involved with the giant Rodeo Chedeski firestorm. SATERN was active throughout the emergency providing assistance to The Salvation Army in it's disaster relief mission. The Salvation Army was assigned by the State of Arizona to be responsible for receiving all material donations. It also was responsible to distribute these supplies to any agency or group requesting them. The SATERN net, operated on 7.265 MHz dayside and 3.990 MHz evenings It finally stood

down and released the frequencies when the shelters closed down and their services were no longer needed.

What SATERN did not do was to handle health and welfare messages into and out of the area. That job fell to ARES and the Red Cross and both responded as expected. A-R-E-S used several High Frequency nets, local repeater communications and the Cactus Radio Network intertie to handle hundreds of tactical and health and welfare messages.

Another group deserving mention is the Kachina Amateur Radio Club. It was activated on June 18th handling communications for the Navajo Emergency Operations Center and shelters set up for the evacuation of all evacuation areas at that time. The Kachina Amateur Radio Club was on the air in support of the shelters through June 30th.

As the fire peaked in late June, more than 4,400 personnel -- most of them firefighters -- were working to corral the blaze. That number has been reduced to about 1100 now that the fire is fully contained.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP, in Scottsdale Arizona.

--

As we go to air, the firefighters still on the scene are busy mopping up smoldering embers top insure no new eruptions take place. In some areas, crews are already at work seeding the burned land to help minimize the effects of erosion from the coming monsoon rain season. (ARNewsline™ from various sources)

**

RESCUE RADIO: EAS WORKING WELL IN THE ARIZONA WILD FIRE EVACUATIONS

The E-A-S system woked well in Arizona during the recent Rodeo Chedeski wildfires. According to reports in the CGC Communicator, Navajo and Apache County EAS woked almost flawlessly in ordering evacuations during fires. About 30,000 people were evacuated at the height of this emergency. (CGC Communicator)

AWARDS: JOSH ABRAMOWICZ, KB3GWY, NAMED ARNEWSLINE™ “YOUNG HAM OF THE YEAR”

The nominations are in and the committee has reached a decision on this yearsAmateur Radio Newsline Young Ham of the Year. And now its time to share that decision with you. And who better to make the announcement than the 2001 Young Ham of the year. Pareick clark, KC8BFD. introduces us to yet another young ham who is keeping the hobby alive:

--

He is 17 years old. An 11th grader at Central Catholic High School in Reading Pennsylvania and an Eagle Scout. And less we forget, he loves bringing new young hams into the hobby through the scouting program. And for those reasons and many more, Amateur Radio Newsline has named Josh Abramowicz, KB3GWY, as its 2002 Young Ham of the Year.

Josh was away at a scout camp when the committee reached its decision. We finally got him on the phone and this was his reaction when we told him the news:

--
Abramowicz reaction audio
--

According to the nominating form, Josh Abramowicz became interested in ham radio because of his parents and the Boy Scouts. His dad is Mark NT3V and his mother is Suzanna NZ3G. Josh says that for him, becoming a ham was in the cards:

--
Abramowicz: I got into it [Amateur Radio] through them when they brought the stuff [ham station out years later after it had lied dormant for awhile. They hooked it up and I just could not keep my hands off of it As a matter of fact, I used to sneak up and just dial up and down the bands just listening to stuff sometimes."
--

His parents also gave Josh a good reason to get his ham ticket:

--
Abramowicz: "After the year years went by they said: 'Why don't you go and get your license – and by the way – if you don't get your license you are not getting a drivers license. I said O-K."
--

Talk about incentive licensing but in short order Josh had his Technician ticket. But it was his involvement in the Boy Scouts, a scouting Jamboree and a chance to operate K2BSA that really started his ham radio career:

--
Abramowicz: "So I looked into what was required on the application. Of coarse you had tio be a licensed Amateur Radio operator. By then I had my Technician license and I really started pushing for my General license. That's where I am now, studying for the Extra license."
--

As a member of the K2BSA staff at Fort A.P. Hill in Virginia, Josh helped to demonstrate ham radio to the 35,000 Scouts attending the event. He also helped in the training of some 400 Scouts who earned Radio Merit Badges at the gathering.

But thats not all. Another achievement credited to KB3GWY is that of organizing a scouting Amateur Radio Venture Crew with the Hawk Mountain Council in his hometown of Reading. PA. What is a Venturing Crew? Josh explains:

--
Abramowicz: “Its kind of like the Explorer program. It involves boys and girls over the age of 14 until you become an adult. It’s a completely separate program designated to high adventure kind of things – not your normal, average camping trips but more involved things like Philmont Treks and summer camp kinds of things or the Florida Sea Base would be considered high adventure.”
--

Josh presented his idea for a radio Venture Crew to the Frankford Amateur Radio Club and obtainded its support as the sponsoring organization. He then convinced the Hawk Mountain Council leadership to use space in a new science center at its headquarters for a perminant Amateur Radio station. This station will soon be available to campers the year round.

--
Abramowicz: “Its up here on the mountain. The propagation will be absolutely great. I’m expecting some really, really good DX from up here and we have high hopes. As a matter of fact, we are going to be doing a demonstration up here this weekend on Saturday. We are going to have some of the Venture Crrew kids up. Just fiddle around with to see whats open and see what we can find. Get the kids on and let them talk a little bit. Maybe a 2 meter set-up. And I think that the Cub Scouts are up that weekend. And they will be checking us out during their free time. They are up for a Super Cub Weekend.”
--

Josh Abramowicz, KB3GWY, will receive his Young Ham of the Year Award plaque at the Huntsville Hamfest in Huntsville Alabama on Saturday August 17th. His trip to the hamfrest is a gift from Vertex Standard Corporation which wiull also be prssenting Josh with a gift of its Yaesu brand ham radio gear. Josh will also receive a week at Spacecamp Huntsville courtesy of CQ Magazine.

--

The committee judging the award also name to runner-up finalists. They are Evan Anderson, KC0CWP, of Ashland Nebraska and Thomas Tenaglia, K3TAT who lives in West Chester Pennsylvania. Both will receive a certificate of appreciation from the award sponsors. (ARNewsline™)

REMEMBERING THE PAST: HEIL DONATES SPECIAL MICS TO QUEEN MARY AMATEUR STATION

A special presentation of ‘commemorative microphones’ honoring the operators of the Queen Mary ocean liner Amateur Radio station will be made on

Saturday, July 27th. This, by by Bob Heil, K9EID, the President of Heil Sound Ltd..

The Queen Mary is permanently docked in Long Beach California. The ship is a popular tourist attraction as is its Amateur Radio station, W6RO, which operates daily from the historic Queen Mary Wireless Room. And it is in that Wireless Room that the presentation will be made.

According to K9EID, the new microphones are being custom manufactured for the Wiress Room. He adds that each is an exact replica of the broadcast mic's used during the years the Queen Mary was at sea. (Heil Sound release)

PROMOTING HAM RADIO: CQ MAGAZINE TAKES ON "THE HUMAN RACE"

CQ magazine has been named the Official Journal of "The Human Race." "The Human Race" is a planned educational television series in which two amateur radio operators will participate in a global "road rally." Amateur Radio Newsline's Henry Feinberg, K2SSQ, has an in depth look at the show and how it will work:

--

How does it work? Simple. There will be two ham radio contestants. One ham will head East and the other West from Kansas City Missouri beginning in July of 2003. Over the next six months the hams will travel around the world but using only transportation that is volunteered by other amateur operators that the ham competitors meet along the way. The race will end in a location roughly halfway around the world where the paths of the two competitors cross.

But thats only part of the story. Along the way, each racer will encounter a series of pre-selected "ham hosts." These are people who have expertise in a particular area of amateur radio. They not only play host to the competeing amateur, but also are interviewed by the competitor about their area of specialty and the role ham radio has played in their lives.

William Desjardins, W1ZY, is the shows producer. He says that " 'The Human Race' is based on the premise that Amateur Radio is inherently a human activity. As such, technology is a tool used by people around the world to connect and communicate with each other."

--
Desjardens: “People who use the Internet, and use chat rooms and send video pictures to each other -- and engage in instant messaging and so forth -- these people are prime candidates to become amateur Radio operators.”
--

By way of technology, each competitor will be outfitted with advanced communications systems, including amateur stations. Each will also be accompanied by a TV production crew and tracked using the Global Positioning System and APRS. This information will be displayed on a constantly updated website enabling hams and others around the world to follow the progress of the race making it a competition that everyone can be a part of.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

For its part, CQ will publish a series of articles and updates written by Human Race Producer Desjardins. It will also provide updates and additional information on its website.

The tentative schedule calls for the completed 8-part series ready to air in the fall of 2004.For more information on "The Human Race," see the program website at www.home.earthlink.net/~bdesj but soon to be moved to http://www.humanrace.org (CQ)

**

BREAK 2

Here 25 years ago and still serving you today. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

UPCOMMING EVENTS: MUSEUM SHIPS WEEKEND

Some interesting upcoming events that you will want to know about. We start off with Museum Ships Weekend. That’s the 20th and 21st of July and word that The U-S-S Salem Amateur Radio Club will be on the air as K1USN. During Museum Ships Weekend each participating vessel will be on the air for 48 hours and the idea is to work as many of them as you can In the case of the U-S-S Salem, a certificate will be available for working ten or more event stations during the event. For more information and a QSL address please take your web browser to www dot qsl dot net slash K1USN. (Via e-mail)

**

SPACE AND SCIENCE: HIGH ALTITUDE HAM RADIO BALLOON LAUNCH SUCCESS

EOSS 57, the Edge of Space Sciences Amateur radio group of Colorado successfully launched and recovered 3 high altitude balloons on June 22nd. THis, using Amateur Radio APRS and DF techniques to track and recover the payloads. According to several Internnet postings, he balloons carried high altitude experiments, camera's and fast scan amateur television to an altitude

in excess of 80,000 feet. The launch took place in DeerTrail, on I-70 east of Denver, with the balloons taking a general North easterly track. The landings occuring near the Fort Morgan Colorado area. The Montana Space Grant Consortium, and Iowa State University Habet crews launched with EOSS and tracked the balloons to touchdown. More information is on the web at www.eoss.org. (EOSS Release)

**

INTERNATIONAL - AUSTRALIA: VNG GETS 6 MONTH REPRIEVE

The Australian standard time and frequency station VNG, which was scheduled to close down on the 30th of June, has received a six-month reprieve. The station will now close down on the 31st of December 2002. The postponement came about following complaints from Radio VNG users. However, the commission that agreed to the postponement has also insisted that the VNG Users Consortium provide a voice announcement for broadcast on the station from mid-July, advising all users of the new closing date. (Q-News)

**

INTERNATIONAL – CANADA: PERMISSION TO JAM

The Canadian military and police departments have been authorized to block radio and mobile phone signals if necessary during the G8 Summit and during the Pope's visit to Toronto in July. A Royal Canadian Mounted Police spokesperson told szeveral newspapers that the move was essential to ensure the safety and security of those attending both events. This is the first time legal provisions against the interference of radio communications have been overridden in Canada. (Published news reports)

**

DX

In DX, word that SP3GVX, who operated from HF0POL in 1997 and 2000 will spend a year at the Hornsund Base on Spitsbergen starting in July. His new callsign is JW0HU. There is no QSL information available at this time. (GB2RS)

Also, SV1BRL will be active again portable from Kefalonia Island from July until mid-September. He welcomes bureau QSLs, but please note that they should be routed through the French REF Bureau, marked DPT 33. Do not send cards through the Greek QSL bureau. (GB2RS)

And a new RSGB QSL Bureau sub-manager has been appointed for the holders of Foundation Licences in Scotland. Those are the new MM3 series of callsigns now being heard on the air. The person taking on the post is Mr R Simpson, GM7NZI. His addxress is 53 Jedworth Avenue, Glasgow , Scottland, post code G15 7QE. (RSGB)

**

INTERNATIONAL – UK – A SECOND CHANCE FOE DIGITAL TV

Still in the U-K, an attempt is being made to revive that nations terrestrial digital TV industry. This, following the collapse of ITV Digital, the company that held the license. According to the Netherlands based Media Network e-newsletter, the U-K's Independent Television Commission considered four bids to take over the license, and has decided to award it to a consortium consisting of the British Broadcasting Company, British Sky Broadcasting and transmission services provider Crown Castle Communications. But the question remains as to whether or not the new consortium be able to restore confidence in the British digital television industry. More is on the web at http://www.rnw.nl/realradio/features/html/uk020705.html (Media Network)

**

THAT FINAL ITEM: THE FUTURE OF DIGITAL TV: PART 4

And speaking of digital television, this week we take a look at transmission systems and who is providing a digital picture to you. Again, from the pages of the D-X Audio Service magazine, here is Editor Fred Vobbe, W8HDU.

--
This is an audio only report. No text available. Please download MP3 audio at www.arnewsline.org.
--

By the way, for those of you not aware Fred Vobbe, W8HDU, is not only the editor of the DX Audio Service magazine. He is also the Chief Engineer at WLIO television in Lima Ohio where he das a first hand working knowledge of whats happening in the world of Digital TV. (NRCDXAS)

Aren't we going way overboard on this question. The Sony isn't going to
more than double the power drain when listening to the radio. In other
words, I'd guess the car radio draws at least an ampere, and the Sony
only draws an ampere.
If he had a sailing yacht and had to run things from battery for many
hours at a time, a dual battery setup would make sense. But listening
for 45 minutes, as the OP asked, doesn't require this overkill does it?

Interesting story on CNN today about the Brit music industry having problems getting air play in U.S. (hurting sales) I wonder if radio was set up in the 60's like it is today, would the Beatles have ever happened? Would rock and roll ever begun? Remember the establishment of the time (music industry and the "traditionalist stations") fought the new wave. Didn't change always came from independent record companies? Didn't the big record companies usually take the little ones over?

2172. Questions for the Engineers

Newsgroup: rec.radio.broadcasting
Date: 2002-07-13 13:59:39 UTC
From: Kevin.Smith@slb3.atl.mindspring.net
Message-ID: <agpbob$cs3$1@xuxa.iecc.com>
Source record: 10435

I'm just a dumb AM/shortwave DX'er, and haven't had much luck finding answers to certain questions I have about AM groundwave propagation. So, if this isn't overkill, perhaps the engineer folks here could help?

Here's my basic understanding of what influences it:

(1) At the transmitter:
(a) kW power -- explanation obvious;
(b) frequency -- all other factors being equal, lower-frequency signals' groundwaves travel further than higher-frequencies';
(b) vertical antenna length -- for generating horizontal lobes, a 5/8-wave tower is best, a 1/2-wave tower second-best, etc.;

(2) Between the transmitter and distant listeners:
(a) Lower atmosphere conditions (air pressure, humidity, pollution);
(b) Ground conditions (level of moisture, ferrous minerals, salinity);

Would that be about right?

If so, then three miscellaneous questions:

Does the conductivity of the ground upon which a transmitter sits have an affect upon groundwave propagation, even if most of the surrounding terrain has very good conductivity? For example, assume a transmitter was located in the center of a 400-mile diameter circular swath of very conductive ground -- meaning 200 miles of good ground in any direction from the transmitter, and that I happened to live slightly within the parameter (e.g. 180 miles from the transmitter). In that case, I would assume groundwave reception might be excellent. But what would happen if the 20 mile diameter region immediately surrounding the transmitter itself (at the center of the 200 mile diameter region) had poor ground conductivity? Would that negate the benefit to me of the remaining 160 miles of good ground conductivity between the transmitter and myself -- as in good ground conductivity needing to be continuous between the two? Or does only the "average" ground conductivity between the transmitter and the listener matter?

Also, is it true that significant ground anomalies (the grand canyon or continental plate boundaries like the San Andreas faultline for example) greatly attenuate ground waves? If so, is this because of the actual physical characteristics of these places (such as the San Andreas fault being a "crust-deep" break in the ground)? Or is it because of other reasons, such as that the ferrous mineral content of the ground might significantly change when hopping over a plate boundary like San Andreas?

Finally, I've read many explanations of AM propagation that referred to groundwaves as "hugging the ground." Does that mean that if I were 750

miles from a transmitter (e.g. no line-of-sight path to the transmitter) that the signal wouldn't exist maybe 5000 feet above ground level? I'm thinking this is probably a Stupid Question(TM), but "hugging the ground" seems to almost suggest it.

Thanks and apologies! :-)

This has no effect whatsoever at AM broadcast frequencies. You might see a little effect at the high end of the short-wave band, approaching 30 MHz. Lower-atmospheric conditions can have a large effect on TV and FM frequencies out to hundreds of miles.

Really distant reception of AM/SW is due to "reflection" (often just bending) from the ionosphere, 60 to 300 miles above the earth's surface. Daytime DX doesn't occur at AM frequencies because of absorption in an even-lower D layer of the ionosphere that dissipates in the absence of sunlight.

Modern car batteries, designed specifically to start engines with a full charge, can exhibit surprisingly little capability to power light loads for extended periods, even electronic equipment for only 45 minutes. As these batteries age, they become even less capable of handling this type of service. Throw in some adverse conditions, and one might find that he needs a jump to get rolling again.

No one is saying that there WILL be problems, but caution and prevention is better than having to call the tow truck.

>> Daytime DX doesn't occur at AM frequencies because of absorption in an even-lower D layer of the ionosphere that dissipates in the absence of sunlight. <<

I have heard 900 CHML from Hamilton, ON, Canada here in New Jersey during broad daylight (~1:00 PM) on my car radio. Same thing with 1520 WWKB from Buffalo, NY; however, these are 50,000-watt clear frequency stations and this reception was during cloudy winter days, so this might have been some sort of pseudo-skywave reception during daytime hours.

I have also received 1620 WHLY from Indiana (now with different call letters) also here in NJ on a car radio in the late afternoon when the sun was still shining! Around local sunset time and just afterwards is the best for DXing Expanded Band stations to the west because you can catch them before they drop to 1000-watt (or less) nighttime power at *their* local sunset time. Going towards the east, you can catch E.B. stations before your local sunrise in the morning when these stations switch to daytime power before your local stations do.

However, there are anomalies that sometimes permit daytime DX; usually the high number of stations on all channels masks this.

My best one was a noon reception of 4VEH from Cap Hatien, Haiti, in September at Cleveland, Ohio. The station, on 1035 kHz at the time, was readable enough to positively identify the Kreol French being spoken. On another occasion, during a CONELRAD test where all US Am stations were off for an hour, I received, also at Cleveland, a Regina, Sask, station on both 630 and 680 (or was it Regina on 680 and Winnipeg on 630). In any case, two Canadian great plains stations well over a thousand miles away.

Indeed... A number of hams of my acquaintance do this. In fact I use a
RV/Marine deep-cycle battery for the rig at home.

Look for one rated in "Reserve Capacity" rather than "(cold) Cranking Amps"
(or just the term "Deep Cycle") and you're on track.

While they handle deep-discharging better than starting-oriented batteries,
their lifetime is better the more shallowly they're discharged.

You are very fortunate. I left my business two-way radio on in my truck one afternoon and the next day when I had an emergency call, the truck wouldn't even try to start. I figured the battery was just weak and old, so I replaced it. A week later, I accidentally left the two-way on again. Same thing: not enough juice to start.

Since then, I have installed a dual battery system. No more problems.

Strange, because 11,922 GHz H at 19,2° east is actually an analogue satellite
transponder used by The God Channel and a SES promo ! Do you think that it
will be converted to digital ?

Lead-acid batteries are most stable and comfortable at full charge, like most other rechargeable batteries. The internal design of a lead-acid battery is considerably different for one designed to deliver short bursts of very high current (for starting your car) as opposed to one designed to deliver a few amps over many hours (as you would find in an RV, trailer, or UPS service).

Sure, your car battery can keep your radio talking with the engine off, and I've seen a marine/RV battery start a car. But you will ultimately get more bang for the buck if you employ the right product for its anticipated usage.

In low sun spot number years, say 6 years from now, the absorption of the D layer will be markedly less toward the high frequency end of the AM band. This will result in "daytime skywave" - long distance propagation during daylight - especial morning and late afternoon. WTOP 50 kW 1500 has suffered that sort of interference even in downtown DC, their City Of License. It's going to be worse for the expanded-band stations above 1600 kHz.

During the winter months, especially December with the long nights and short days, the lower layer has been known to stay charged all day.
I worked at a station in Cocoa Beach,FL on 860 kHz (1000 watts, now dark) and got a call one December day at 3 PM from someone in Mid-Town Manhattan who played it back over the phone, and except a little splatter from WCBS, was fairly clear. Also during December, CFRB can regularly be heard under the local daytimer on 1010 kHz at almost any time of the day, and I used to be able to hear KLRA (I believe those were the calls) Little Rock (now dark, but used to be on 1010kHz) during December and early January. These are all distances of over 1000 miles, during the middle of the afternoon.

While we are discussing DX'ing... FM 'ducting' has been better in the past month in the Ohio Valley than I can remember in a long time.
Stations from Tennessee and North Carolina have been coming in here in Central Indiana all week long.
Last night WKZT, channel 23 from Elizabethtown,KY came booming in Central Indiana, obliterating Indianapolis/Noblesville's WNDY channel 23.

Hi Thierry,

10921H (Tp63) is GOD. 11922H (Tp79) is a digital package - UPC
Direct/Nowa Cyfra +

http://www.lyngsat.com/dig/upcdirect.shtml already lists Caroline.

Regards

Mike

It's unfortunately tempermental and needs an external mic for decent
audio, but the Pogo RipFlash is small and records MP3 internally,
up to around 18h at 16kbs (down to 1.5h at 192kbs).

I use it to record 4+ days of Imus each week, and to move audio
around from this analog device to that.

It does step thru cuts and is pretty cheap.

If you have a USB port (I don't) your computer can organize it,
at least I suppose so, and up and download.

Biggest screw-up: if the battery dies recording (takes 5h with the
audio off), memory pointers are garbaged and you lose the recording and
subsequent recordings usually won't work right. You have to recover by
recording a full memory at 192kbs and then deleting it. Maybe they'll
fix this someday.

Uses _many_ batteries. Get NiMH rechargeable AAA's and a smart charger.

It really does have decent audio though and lots of recording time
and is pocket-small.

The ultimate incentive for me was being able to record high-pitched
birds like cedar waxwings on my bicycle commute, which the Panasonic
RR-QR240 I usually carried was unable to accommodate.

No doubt the design is really aimed at carrying bootlegged MP3's
around with you but it has other applications.

Have you investigated its power demands?

I'd imagine that most original-equipment car radios, plus a Sony XM
tuner, will draw consideranly less.

It would be instructive to have numbers to allow a real comparison.

If you study your history of the Beatles, you would learn that they DID have trouble getting airplay in the United States at the outset of their commercial success in Britain.

They had several hits in Britain in mid-1963, but EMI's U.S. record arm - Capitol Records - did not see any commercial viability in them at that time, and several of their early singles wound up on small company labels -- Swan, Tollie, and VeeJay.
So did their first LP album, which ended up on VeeJay.

VeeJay did have the Four Seasons, but if I recall correctly they were the only 'name' that they had inhouse.

In late 1963, the Beatles became such a phenomenon in Britain that they attracted the attention of the American press. Coincidentally, the assassination of President Kennedy prior to the holiday season left Americans grasping for a boost of cheer and good news, and the Beatles were it.

The advantage of being on a major label at that time was promotion.
EMI/Capitol didn't think that the Beatles were worth promoting in America.

What a lot of people forget is that America was not introduced to the Beatles by Ed Sullivan (although he had their first live US TV performance), or Murray the K (a New York disk jockey who self-styled himself as "the fifth Beatle") but through articles in Life Magazine, news stories on the American networks, and a filmed concert appearance on the very popular Friday night Jack Paar show on NBC.

Only after those appearances on TV, the news, and print media -- where they were promoted as a "happening" and not for their music - did Capitol/EMI begin promoting the group on this side of the pond, in time for holiday record sales, and Ed Sullivan saw a pheomenon emerging (they had already become huge stars by the time of their appearance on his TV show) and Murray Kaufman wound up promoting himself because he promoted the Beatles.

In other words, the Beatles happened in America in spite of the fact that their own label refused to promote them at first.

VeeJay was a small Chicago-based R&B and jazz label and they had plenty
of "names" in those genres. The Beatles were very familiar with their
roster and proud to be on VeeJay. They had also solicited Motown.
Somebody framed our copy of the rejection letter that we had sent them
and hung it on the wall to keep us sober.

>In late 1963, the Beatles became such a phenomenon in Britain that they
>attracted the attention of the American press. Coincidentally, the

Brian Epstein hired the publicist who had launched the British "mod"
fad in the fashion world to work on the Beatles in the U.S. He was VERY
skilled at getting them coverage in places where music wasn't generally
covered. It was a brilliant end-run around the American music
establishment. (...this COULD easily happen again...)

>The advantage of being on a major label at that time was promotion.
>EMI/Capitol didn't think that the Beatles were worth promoting in America.

The advantage was distribution, the ability to get enough copies into
all the stores and enough leverage to motivate stores to make sure they
didn't run out of your record. This hasn't changed a bit. Promotion and
exposure are useless when there is no place to buy the record and no
documented sales figures available to convince any unbelievers that it
isn't a "stiff."

>In other words, the Beatles happened in America in spite of the fact that
>their own label refused to promote them at first.

The Beatles happened in America because their manager and his publicist
MADE the Beatles happen in America. Record labels don't ever make
artists happen unless they happen to also be run by the artist's
manager.

WORLDSPACE NEWS UPDATE 15/07/2002
The great day came and nothing happened.

Because of contractual obligations and the Non Disclosure Agreement within it, I am not able to tell you which platform I am talking about. However, anyone with a single brain cell can work it out from the posts on this list.

Everything was going fine until 1250 when I received a phone call telling me that the "men with screwdrivers" needed to make some changes. These were explained to me but as I can not tell the difference between a volt and a watt, I didn't understand a word of it.

It is just a short delay whilst they do whatever they have to do.

My show was very flat today as my heart was not in it. I had built myself up to the great announcement and felt completely deflated when, at the very last minute, I was not allowed to say anything exciting. When I say "I was not allowed to say anything" this was NOT on instructions from PM, it was the NDA agreement to which I am party.

I was gutted.

Keep your chins up.

Yes - but my point was clear - EMI / Capitol chose not to press / distribute / promote the Beatles in mid-1963. No European pop star(s) had ever made it in America, and EMI didn't believe (at first) that the Beatles were any better than any others before them.

Ironically, Billy J. Kramer DID have a minor hit in the summer of 1963 - a Beatles' song - "Do You Want to Know a Secret?" - charted low.

And Top 40 radio air play didn't help at all I guess??? Which, I think, was my point. Radio gave most independent record companies (where Rock and Roll and R&B came from) an audience. What I was trying to say (perhaps awkwardly) is that it might not happen today, with "corporate" radio, and "corporate" record companies. The range of music played back then was quite extensive on the same radio station. Niche programming aimed at certain demos isn't very wide in its scope.

Top 40 back int he 50's and 60's was a mass appeal format, while now it is pretty much a niche within 12-24. And the problem or reason has little to do with corporate radio and everything to do with the expanded number of stations on the air in each market today versus the total in, let's say, 1964.

An example I like is Cleveland, Ohio... sometimes called the birthplace of "rock and roll." 1964: 6 fulltime AMs, one suburban AM and one daytimer. FMs no factor at all (I worked at one) or were simulcasts of AMs. Of the 6 fulltime AMs, only 2 or maybe 3 (1100, 1220 and 850) could be called full market signals at the time; the others missed important suburbs to the East, West and South of the central city. Most other major US metros are similar situations... smaller markets are even greater contrasts (Traverse City, MI: 2 stations in 1964, one a class IV and the other a daytimer. Now: 31 stations in the metro!)

According to BIA, there are now 31 signals serving the metro. Naturally, each in its turn is going to pick a vulnerable portion of someone else's audience to serve better or to serve first. This all happened mostly in the 70's, far before reregulation, deregulation and consolidation.

Today, no one would put up with a typical early 60's Top 40 mix of Wayne Newton, Little Eva, Elvis and Lolita back to back. Each listener would go to a station that plays more music that was on target for their taste.

Anecdotally,a gain, I can recall taping the 1959 Top 100 of the Year countdown on a Top 40 station, and then editing out the 40 or so songs I hated totally. No station today could survive with 40% "hate" scores on its music.

Friday July 12th 2002

Peter Moore commenting on recent rumours regarding WorldSpace and the Ross Revenge:

Since I have just gone to much trouble negotiating a new lease on our Maidstone studio I obviously have no intention of moving our base. If we did move it would be to go to the ship for our studio location, but that it not feasible right now.

I may be able to borrow a studio in London now and again for presenters such as Tony Allen since he is sometimes not well enough to go to Maidstone, but he could get to the London studio within say ten minutes on the Underground train.

We are planning a 2003 season for the Ross and we would not be doing that if we had any intention of scrapping her. Nor would we be overhauling the ships propulsion system and putting in a brand new galley.

This rumour is of course a concoction designed to distress Caroline enthusiasts but no sensible person will be fooled.

Right now it seems that I am about to put Caroline on 252, 279, 1386, Worldspace and Sky if the rumours are to be believed. I am sure that I would love to do those things. A couple of million pounds would help me achieve these dreams.

In the meantime I just keep my head down and do my job.

?????????? I see no showmanship in thier methods. Just insulting people and general negativity and hate speech. Of course they ahve te right to say anything they wish (I support that right fully)..however for "radio" to sink to this level is pathetic, and only breeds more hateful citizens and our society suffers.

Listening to all that hate is more than "just entertianment". You can rationalize the issue all your want in order to justify their shows and the national coverage they have, but it is mroe than "entertainment", some of the listening audience are really being "Trained" to be jurks and we all suffer because of it.

Why not have a show with guys that inform, and are positive and compliment listers and callers????????????? why not????????

NPR does not have hate on their programs (and not all of them are boring as shit (though some are terrible, none preach hate).

Yes! like his last reform bill (swiss cheese hole anyone can fly though (sadly......we need real reform badly)).

and quite the egomaniac.

SURE! You have to be to run for any office. All congressmen have HUGE egos ;-((sadly).

16 July 2002

The following is reproduced exactly as it was received by newsdesk@radiocaroline.org. We have gone to great lengths to confirm it is authenic and not, as has been attempted before, a hoax email from an imposter.

**

Subject: The one and only response from the Radio Caroline Office.

Good day, Peter Moore here.

I made it a policy long ago not to respond to material appearing on various fringe offshore radio sites. I then even stopped reading the postings. Previously when such postings still came to my mail box I had 4600 useless messages backed up.

I am breaking my silence just once since some postings on this fringe site are causing ill feeling. Please be aware that Radio Caroline cannot comment on recent speculation regarding Worldspace's agreements/discussion with other broadcasters. We are not privy to such information and even if we were, this information would be held in commercial confidence.

Whilst sending this message let me point out that there is no merit in your
making judgements about whether our ship Ross Revenge should be scrapped or retained. There never was any intention to scrap her or any discussion of the subject. The report on this site is a lie designed to provoke response.

When I am mentioned on this site and suggestions are made that I declined to comment or was not available for comment, this is also not true. The truth is that nobody has contacted me for a comment.

I readily accept that our own news outlets i.e. Newsbeat Magazine, The Caroline Newsline and our site www.radiocaroline.co.uk are rather slow in releasing news of interest to you. This in part is due to pressure of work and in part because there is a proper and improper time to release information. However we intend to correct this short coming, after which time you will be able to get factual info about Caroline from our outlets so
that there will be no need to use ill informed fringe sites.

Best wishes,

Peter Moore,
Radio Caroline.

No, they are offensive. Not entertaining.

> It would appear that anyone expressing opinions with
> which you disagree is deemed an "asshole and hate-monger".

No, that has been you Sir from our first "tiff" months ago. Unlike you, I try to be civil and believe in the concept of "agreeing to dissagree".

Beck/Rush/Savage/Liddy are NOT civil NOT polite NOT informative. IF they were I would have no problem with these "men". Will is civil, Buchanon is civil, Allan Keyes is civil, (and I dissagree with alot those men have to say on matters).

The above assholes are not assholes becasue of their political beleifs, but because of their "presentation". A guy who insults the President's 13 yr old daughter by comparing her to a picture of a Bassett hound on national TV is a disgrace to humanity. And a disgrace to all gentlemen.

> would be interested in your personal definition of "hate-monger".

Micheal Rass Ezekiel is a good example. He LOVES Savage.....Savage and his ilk breed listeners like him. No wonder radio is pathetic and is contriduting to the destruction of our civil society.

It's OK to be terrible as long as a show doesn't "preach hate" (whatever
that is)?

The original question was - could the Beatles have made it today with the current system? This is one of those "who knows" questions - but they made it IN SPITE OF the system in place at the time.

>office?

Actually, I consider myself a literate individual who considers a pole
to be a round vertical (or horizontal) structure or, capitalized, a
person of Polish descent.

In the case of politics, one usually runs FOR office, not OF office.

Rich

I don't see the word "approve" in either the sentence fragment or the
explanatory sentence that follows. Where did "approve" come from?

> Or are you one of those perpetual "fence-sitters" who awaits for the pole

I don't try; I am civil. How have I not been? What is "agree to disagree"?
Either you agree or you don't.

> Beck/Rush/Savage/Liddy are NOT civil NOT polite NOT informative. IF they
> were I would have no problem with these "men". Will is civil, Buchanon is

Just using the word "sir" (above) does not constitute civility. In what way
are the hosts you don't like uncivil? Why does it matter? Do you downgrade
movies when the characters are "uncivil" to each other?

> The above assholes are not assholes becasue of their political beleifs, but

Oh, I can think of a lot worse things to get worked up about than rude
remarks by radio entertainers. I trust you avoid nightclub acts, comedy
clubs, intimate theater, and "Who's Afraid Of Virginia Woolf" (stage or
screen) at all costs.

Well I could say something about the pole, but I'm sure you can figure it
out.

>
> In the case of politics, one usually runs FOR office, not OF office.

Yes Rich, do what you do best, avoid the question/issue and redirect the
subject to my illiteracy. Yes Rich I'm functionally illiterate. We all know
this illuminating and titallating fact.

I suspect most here could care less if I can read and write or not, and probably await a relivant reply by you concerning your defense of rant radio (or condemnation of rant radio). How much longer do you intend to obfuscate the issue and cloud your silent cowerdice by redirecting the reader to my illiteracy?

We suspect you sold any principles (assuming you had them once) to the bigger buck, since you remain silent on the issue of hate-rant radio.

2220. XM Radio - Impressions and Questions

Newsgroup: rec.radio.broadcasting
Date: 2002-07-18 12:44:52 UTC
From: matt_becker1969@hotmail.com
Message-ID: <ah6d84hab1@xuxa.iecc.com>
Source record: 10382

Hi,

Had XM Radio installed in a 2000 Saturn LS2 on 7/16/2002. Done at Best Buy.

First, never have Best Buy install your XM radio (probably not anything at all). Left wire nuts in the car, didn't replace the "kick plate" where they went in to get the stereo, didn't flush the stereo back, rude people, the list goes on. They wanted to install the sat antenna on the trunk which XM says to not do. We had plenty of room on the roof with plenty of rubber around the window to hide the wires. They ended up installing it on the roof.

Second, XM radio took over 14 hours to get the radio working. Their system crashed last night so any online activation didn't go through. Called them 3 times and finally got ahold of someone who would "invoice" me vs. credit card and activate it right away. That was midnight last night (EST). Still wasn't functioning until 8:45 this morning. This, was poor!

Now that it works, it's great!

Questions:
Does anyone's antenna (regular antenna for FM/AM) not work when you have the XM remote on? It seems that our radio stations go static when the XM remote is on. You turn it off and the FM/AM signals come back strong. Sounds like a mistake in the installation (Best Buy again...argh!)

Does anyone with the Pioneer FM modulator (not sure of the number..G-something-something-FM-X-somthing) have scrolling song names and artists? Is that possible?

Last, does anyone's volume level between XM and FM channels get louder (i.e. the FM radio volume is louder than the XM when switching back and forth). I would think it would be the opposite. I have it set to Level-4 on the XM remote...

Thanks for any information!
Matt

I don't try to hard to be civil to you. I tried that last spring, and you ignored my attempt at civility, by insulting me personally. I try initially to be civil to anyone I meet for the first time. But if they come-off rude to me, I tend to honour reciprocity and return the favor.

> In what way
> are the hosts you don't like uncivil?

I informed you in "what way" in the early post. They insult callers who don't follow thier extreme-right-propagandist views. Constructive dialog is not an option with them, only insults and rant and hateful and dissrespectful raving toward those who call in.

>Why does it matter?

It matters because some folksa re impressionable and our society loosses out via uncivility and more angry and hate-filled citizens. Road rage, shootings, etc..... and these shows only contribute to this mindset.

> Do you downgrade
> movies when the characters are "uncivil" to each other?

Silly comparison. First movie dialog is between the movie characters, not toward teh audience. Secondly, talk radio is interactive, so insults are direct to the person calling and interactive in realtime. Listeners hear a direct insluting and haughty attitude to the caller and are more affected by it than an artificial setting between fictional characters on film.

>
> > The above assholes are not assholes becasue of their political beleifs, but

An unjust king asked a devotee what kind of worship is best? He replied:
'For thee the best is to sleep one half of the day so as not to injure the people for a while.'

I saw a tyrant sleeping half the day.
I said: 'This confusion, if sleep removes it, so much the better;
But he whose sleep is better than his wakefulness
Is better dead than leading such a bad life.'

Oh, they certainly do the new equipment part - when they consolidate their ownings into a single studio complex they invest gobs of money on new equipment. However, this is not "the station", it's only the physical plant. It's also a huge tax write-off for the corporation! And it really does nothing to benefit the "end users", which is the listener.

> So, where are all these local people who used to work at the stations
> in my market now owned by CC? I thought they had been fired, and
> replaced by tracking done out of Miami and Tampa.

That's also part of corporate consolidation - more jobs done by fewer people. Which makes for larger profits for the owner(s) and less variety for the public and far higher "burn-out" among the staff. You must realize that retirement pensions are a large part of a corporation budget, and one that they want to control or eliminate. Doing a good job? Here's yet another job you must do for us, and with no extra compensation. Don't like it? There's the door.

> But I guess I'm wrong and CC has been hiring programming people and
> keeping it a big secret.

Nope, you're not wrong; they hire minimum-wage board operators. And only if they HAVE to have someone there on the weekends.

I've had XM activate radios three times. The activation took place
within 20 minutes of my phone call in all three cases. You must have
hit them on a really bad day.

> Questions:
> Does anyone's antenna (regular antenna for FM/AM) not work when you

> when the XM remote is on. You turn it off and the FM/AM signals come
> back strong. Sounds like a mistake in the installation (Best Buy
> again...argh!)

No, that's absolutely the way it should work. The idea is that the FM
modulator switch the radio's external antenna off when the XM is on.
That is so that your local stations won't interfere with the signal from
the modulator. In many areas there's not really a dead spot on the FM
dial, so this scheme is really needed.

> Does anyone with the Pioneer FM modulator (not sure of the
> number..G-something-something-FM-X-somthing) have scrolling song names
> and artists? Is that possible?

The original issue didn't scrolling. Mine just came back from repair,
including the latest software. I'll report if the names scroll within
the next day or so..

> Last, does anyone's volume level between XM and FM channels get louder
> (i.e. the FM radio volume is louder than the XM when switching back
> and forth). I would think it would be the opposite. I have it set to
> Level-4 on the XM remote...

Over-the-air FM stations are heavily processed so that they sound LOUD.
Over-the-air stations also are required by the FCC to premphasize the
high frequencies, but their processing takes this into account to avoid
overdeviating and going outside the passband of your radio.

OTOH, XM doesn't process much, and the processing isn't adjusted with
FM-modulator adapters in mind. The FM-modulator has to preemphasize the
highs just as over-the-air stations do, or XM (or Sirius) would sound

very muddy. Thus, if the XM adapter was set so that it sounded as "loud" as over-the-air stations, the high frequencies would be overdeviated and sound very distorted. Set your Level to 1 to see the effect on the high frequencies.

What should be done, IMO, is to have a very simple processor in the FM modulator adapter which compresses the high frequencies when they would cause over deviation and distortion. Considering that FM-modulators have been around a long time for CD players [where the problem would be the same], I'm surprised that this isn't a common feature.

Don't blame XM, Sirius will have the same situation. Radios with builtin XM - a direct audio connection - won't have this problem. The Sony using the cassette adapter doesn't have this problem. The Pioneer when plugged into their bus which also supports CD changers doesn't have this problem. If your car radio has direct audio inputs, I understand that you can get a cable that allows the Pioneer XM adapter to plug into it - called something like "Blitzcable".

I hope this at least explains "why".

Every expense in running a business is a "write off." Business pays taxes on income less expenses. This is often called "profits."

There is nothing evil about a "write off." It is, literally, just another way of saying "expensed" to cover a legitimate business expense. Salaries are a "write off." Office supplies are a "write off." Equipment is a "write off." They are just expenses.

Equipment is not "written off" instantly, but in small pieces over the useful life of the equipment. In other words, putting in new equipment is an investment that can't be expensed, or "written off" instantly. Exception: a piece of damage or failed equipment can sometimes be written off before its full usefull life is over. In any case, this reflects the usage of the gear, not some tax scam.

Huh? Radio companies have never had retirment pensions (with tiny, tiny exceptions in a few IBEW/AFTRA markets) as so few are union shops. I don't think I have ever met a radio person with a company financed retirement plan... and I have been in this thing for 43 years.

Where did you get htis idea? It's just patently wrong. It has only been since the bigger companies were created that we now have ESP plans, 401-k plans and other benefits that will eventually (if the market stops tanking) contribute to our retirement income. When the caps were 7/7/7 on ownership, I don't believe that any independent broadcast company offered such

benefits. Many did not even have medical insurance then.

Now, the bigger the company, the better the benefits. One of the recruitment advantages that the larger consolidators have is the ability to get better medical plans, etc.

Actually, they have. If you look at any cluster, the total employment is up... it is just the department balance that has changed.

> Nope, you're not wrong; they hire minimum-wage board operators. And
> only if they HAVE to have someone there on the weekends.

I see. That is why they offered WBBM-FM's morning crew $1.5 million a year to jump ship?

Agreed. I had experienced poor associate training at Best Buy many
times before and, as a result, chose to have my Pioneer FM modulated
XM radio installed at Circuit City. CC installed the Terk antenna on
the roof of my dark blue 2001 F150 (making it look like a shark fin)
and I've experienced excellent reception with this installation.

>Second, XM radio took over 14 hours to get the radio working. Their

>again...argh!)

Unfortunately, this isn't a mistake in the installation. Your post
isn't 100% clear, but it sounds like you had the FM modulated unit
installed. The installation of this unit requires a "tap" into the
antenna line of the factory installed radio. The FM modulated unit is
essential "walking on" or modulating over the terrestrial radio

stations when you have the unit turned on.
>
>Does anyone with the Pioneer FM modulator (not sure of the
>number..G-something-something-FM-X-somthing) have scrolling song names
>and artists? Is that possible?

This is the one detractor to the Pioneer FM modulated unit. Unlike the Alpine or Pioneer in-dash models, the remote display for the FM modulated unit does not scroll the text. Blame this on Pioneer and not XM. The in-dash models work in the showroom just fine. Now if Clear Channel would finally bless RDS I'd have the same functionality in my factory installed radio as well.

>
>Last, does anyone's volume level between XM and FM channels get louder
>(i.e. the FM radio volume is louder than the XM when switching back

Yes. I have the exact same problem. I think the difference is so minimal as to not be noticed unless I really have something cranked up loud. Where in the menu is the setting for loudness? I've never noticed this before.

Best,

Jeremy Powell

>Does anyone's antenna (regular antenna for FM/AM) not work when you
>have the XM remote on?

Most modulators are connected in series with yourt radio antenna. When the modulator is on, the antenna is disconnected to prevent you from becoming a rolling broadcast station. When you power it off, your FM reception should return to normal.

>Last, does anyone's volume level between XM and FM channels get louder
>(i.e. the FM radio volume is louder than the XM when switching back
>and forth).

Your modulator may have a level trim control, which would allow you to more closely match the XM audio level to that of a typical FM broadcast. It is usually a small screwdriver adjustment that can be accessed from the exterior of the modulator.

Since XM promises more dynamic range than your usual FM station (I don't know if they deliver on that promise) your modulator may intentionally be set at a lower level to prevent overmodulation on very dynamic audio.

It is also fair to point out that if the particular channel you are listening is not as compressed as commercial FM radio, it may sound softer, even though audio peaks are relatively the same level. Commercial broadcasters go to a lot of trouble to make their station "the loudest on the dial." I think the logic is, "If you can't be good, you'd better be loud."

Probably because it is pretty much a non-issue. Is the "off" switch on your
radio broken? Are there no other stations to which to listen? You can always
take the batteries out or unplug it from the wall.

Source record: 10394

Partial interest in AM station for sale. The "Radio Crazy" is back!

We are still seeking investors to help us acquire a class "C" AM (formerly called Class IV, silly!)in the Huntsville, AL area. 1 KW, fulltime. On the air since trhe middle 50s.

Total consideration is $150,000 with $25,000 down. We have the earnest money pledged already.

Active or inactive investors with at least $5,000 each are welcome. No single investor may own over 49 percent.

All investors would be on the board with full voting rights if desired.

We have an FCC attorney. I will disclose callsign and the name of our attorney to interested and qualified parties.

No "AM bashers" or "Megative Nabobs" please! If you don't have $5,000 available in a 45 day timeframe, please don't ask!

My tel. in Macon, GA is: (478)741-1710.

The "Radio Crazy" was Chief Engineer for a 5 KW fulltime AM in New York City in 2001. So he is not THAT crazy! LOL!

73,

Meyer Gottesman, W6GIV

YES I judge these shows as crap and offense. I have no problem with "setting myself up as the supreme judge".....since you keep ducking that responsibility and defend these shows to reasonalize their existance in the radio medium.

Oh the moral relativist. So for you is is ok to have a show about killing homosexuals, beating niggers, jailing wops and micks and of course spics. Can't leave out the ragheads-sand-niggers-camel jockeys, nor the chiefs or chinks-slopes-gooks.

Rush-Savage-Beck-jones-Liddy, are all very close to the above in on-air attitudes. Afterall Beck ranted about nucking Bagdad/Tehran last month.

These shows are a dissgrace to humanity, and to radio.

I have my Terk antenna "resting" on the rear package shelf (inside the car), just behind the third brake light. It works very well, with only occasional cut out under two or three underpasses on the freeway.

I've done the installation myself on two cars. The first was a 1994 T-Bird, and the second a 1953 MG. Both sound wonderful, although I notice high-frequency distortion on some loud trumpet passages occasionally. Maybe I need to turn down the gain (Pioneer Modulator type).

Agreed. I had experienced poor associate training at Best Buy many times before and, as a result, chose to have my Pioneer FM modulated XM radio installed at Circuit City. CC installed the Terk antenna on the roof of my dark blue 2001 F150 (making it look like a shark fin) and I've experienced excellent reception with this installation.

Circuit CIty installed mine (and my subsequently purchased head unit), both to my satisfaction. The Terk antenna is on the trunk of my 2000 Chevy Malibu, and the reception is great. I'm glad they didn't have to cut around or do anything weird with the back window and put it on the roof. I'd be surprised if anybody has the XM antenna on their trunk and is getting poor reception -- anybody you know run into that?

:No, that's absolutely the way it should work. The idea is that the FM
:modulator switch the radio's external antenna off when the XM is on.

fwiw my fm modulated CD changer has a very minimal effect on
fm reception. I can leave it on and switch between the cd's on
'89.9' and broadcast stations with no problem. So its not the way
it has to be.

I stand corrected. I do not have the Terk antenna, I have the Pioneer
model AN90XM antenna. Maybe my shark fin comment will make more sense
now.

A buddy of mine, who actually works for XM in D.C., *does* have the
Terk (TRK-SR2) antenna mounted on the trunk of his Audi A4, also using
the Pioneer FM modulated unit. I've been a passenger with him on a
couple of different occassions and, even in tunnels (where, yes, I
know they have repeaters) I've heard no loss of signal.

Overall, I've been very impressed with the reliability of reception.
I've driven through some horrendous thunderstorms, taken my F150 into
some VERY out of the way and heavily wooded places. Rarely have I
ever heard so much as a stutter.

In fact, there are only two places where I've been able to repeat an
outage. In case there are any XM engineers lurking in the newsgroup,
they are:

The intersection of 12th and Pennsylvania NW in downtown D.C.
(coincidentally right in from of the FBI building - it's a
conspiracy). The second is on I-95 between exits 158 and 156 in
Northern Virginia.

Otherwise I've driven all up and down the east coast without any other
memorable outages.

I take greater responsibility than you do. You have determined these shows
to be unworthy of hearing, yet you listen in violation of your own judgment.
I similarly judge these shows, and I don't listen, honoring my own judgment.

> Oh the moral relativist. So for you is is ok to have a show about killing

If the ratings support their continuation, they are hardly a "disgrace to
radio". Whether they are a "disgrace to humanity" is for each and every
individual listener to decide for himself.

I hope it is a modulator problem and not an artifact of the digital
encoding.

I have played both a Pioneer modulator version and a Sony with cassette adapter through the same car radio .....

The problem seems mainly in the modulator when the modulation is set too high. I'm not sure it can be set low enough to ___completely___ cure the problem on the most extreme records. OTOH, it can be set low enough to satisfy my old ears/

The record that was worst on the Pioneer came up again when I was using the Sony cassette version - much much much much better.

BTW, my Pioneer just came back from repair* with a new ID number. It took a while for XM's computer system to decide that the "repaired" ID was acceptable. After their computer OKed my new number the radio received its authorization within 10 minutes. They suggest not even trying for 20 minutes.

Bob C.

* What appeared to be a glitch on the car's 12V electrical system had the radio unable to tune to 2 of every 8 channels - clearly some binary problem. Most of "my" channels were OK, but ... it needed repair.

BTW - don't go through the normal push-the-buttons menus when you call Pioneer for XM service. Just press 6 the first time you get that option. From the radio's new ID number, it may well be the 45th unit they have repair. Not bad since there must be tens of thousands of their units in the field.

Remember what Nixon said about the majority..................in a few years
you may find that your radio industry is serving the remaining remnant of
the population. The rest of the silent majority having been lost to you.
I'mnot so silent, but I jsut may soon become the majority. What are you
going to do about it? Insult me and others and just say "bye" or will you
have the gumpsun(sp) to address the problem and start serving the leaving
puplic in a constructive and valuable manner?

Look obvious to me you've chosen the former.....no?

Enjoy the handfull of folks you will end up reaching in the near future as
radio dies a much deserved death. ;-). Now maybe if you supported trying to
repeal Telicom, and protesting CC and ilk programming you would be more of a
"solution" and less of the "problem" WRT quality radio.............I won't
hold my breath however.

The door hit my butt years ago........just wishing for the way it used to be
(better).

Sadly, Howard G Rose, Founder of the Radio Magazine, and popular broadcaster from several "Offshore" Radio Stations, including Radio Northsea International, and Radio Caroline died suddenly on Wednesday 17th July.
Apparently Howard died in hospital at the age of 49, after suffering a heart attack, following an operation.
He leaves three children, and his wife Patricia.
Howard broadcast under the names of Crispian St John, and Jay Jackson, and his fruity voice will long be remembered by all who heard his programmes.
I Knew Howard in those early days, and we were shipmates on both Radio Northsea and the Mebo II, and on both the Caroline ships.
We shared many adventures, especially on board the Mi Amigo, and on shore in Holland during the early 1970's.
I am deeply saddened by his death, a feeling that will be shared by all who knew him.
I send my heartfelt condolences to his family.
Further details are available at the Radio Magazine website.
www.theradiomagazine.co.uk
Respectfully,
Peter Chicago.

>
> I take greater responsibility than you do. You have determined these shows
> to be unworthy of hearing, yet you listen in violation of your own judgment.

No, I don't listen.....this past year I've listend to maybe 1-hours worth for all the "men" mentioned. That is what is so sad! I scaned to Becks rant three weeks ago, and literally within 45-seconds eh ass was promoting nucreal strikes againts several million civilians........

Same with the others.....i've literally scaned to the shows for 1-2 minutes total time investment by me over several months time.....and to hear this shit from such a short sample is very illuminating WRT to their character and value.

> I similarly judge these shows, and I don't listen, honoring my own judgment.

I honour my judgment and don't listen to ths crap either. I also honour others' judgement in general. I don't honour these shows in any way, shape nor form.....they really serve no good perpose. They do serve evil-hate-maliciousness. In simple terms they are vile (and yes this is my judgement on the matter).

>

> > chinks-slopes-gooks.
>
> No, I wouldn't have such a show.

Good! Me neither. And thankfully most folks out thier wouldn't either.......yet the minority assholes still get heard via radio-talk-rant, and good, noble radio lies in the grave of "idealism" I suppose. Sad that you defend such shows.....Whether you listen to them or not really isn't the issue, if you don't like them you really should condemn them as hateful.

>

>
> If the ratings support their continuation, they are hardly a "disgrace to
> radio". Whether they are a "disgrace to humanity" is for each and every
> individual listener to decide for himself.

Well if they are a disgrace to humanity, then they are also a disgrace for radio.......are they not? BTW there are absolute "rights and wrongs".........moral relativism is not a moral concept - that way is anarchy. If your take moral relativism to the extreme and obsurd (ie. hitler) then you can justify any position and act as "well its ok for others to ("kill, rape, mame,etc...., but not me".............).

--
"If ye love wealth better than liberty, the tranquillity of servitude better than the animating contest of freedom, go home from us in peace. We ask not your counsels or arms. Crouch down and lick the hands which feed you. May your chains set lightly upon you, and may posterity forget that ye were our countrymen."

Samuel Adams, speech at the Philadelphia State House, August 1, 1776.

2248. Re: XM Radio - Impressions and Questions

Newsgroup: rec.radio.broadcasting

>> I hope it is a modulator problem and not an artifact of the digital encoding. <<

Knowing XM, it is probably an artifact. XM uses "Spatial Band Replication" (SBR), which means all of the frequency response above about 8 kHz is artificial, based on a very low bit-rate guide to tell it how to "guess" the high treble frequencies based on harmonics of the lower frequencies.

A muted trumpet contains an extreme amount of audio energy above 8 kHz (up to 25+ kHz on a good LP), and these high frequencies need to be reproduced accurately for it to sound natural. XM's encoding might be acceptable for modern electronically produced pop music, but things like this example of a muted trumpet are going to have obvious artifacts in the audio, as the SBR tries and fails to correctly "guess" how to artifically construct the high treble response.

Also, it is almost laughable how XM's audio encoding has so much trouble with human voice! I've listened to in-store demos of XM, and on many channels the DJs and announcers sound like they're coming through a RealAudio feed on a 28.8 kbps modem, with obvious artifacting, especially on sibilants (pronunciation of the "S" sound).

No wonder XM is very careful *not* to use the phrase "CD Quality", even though the press and unknowing listeners like to call it that. XM just calls it "Digital Quality" sound, which is completely meaningless because even the awful digital PCS cell phones that give us garbled, unintelligible speech can be called "Digital Quality" sound.

Hi,

I enjoyed your Capital Radio website. I was wondering if you have any
airchecks of Alan Freeman hosting Pick Of The Pops Take 2 or any episodes of
Freeman hosting Pick Of The Pops on Capital.
I have a few "POTP Take 2" from 1988 just before he left the station, but
I'd like to find more if I can.

I will trade or buy.

Thanks!

No audio yet but "WS TEST 1" is still showing on WorldSpace at 7.30 am this sunny Sunday morning, I am trying to get confirmation that this the Caroline channel (I expect it is). Signal stength is maximum. Its still "Coded" ie encyrpted.

Its easy to tune in on the Hitachi by "Search" then "Memory" then "1" on the keypad and "Enter", then you have Caroline where it should be on satellite radio - number 1.

Has anyone read any reports of this in the national press yet? I see "Waveguide" and others have it so word is getting round.

Enjoy

Mike

>I'mnot so silent, but I jsut may soon become the majority.

Hmm. As I recall Nixon resigned in disgrace for being less than honest. Not exactly my first choice in the credibility department.

I believe he, and others, found there was no "silent majority." There were simply people who had other things on their minds than what was important to those within the Beltway.

The good thing for a politician claiming there was a "silent majority" was that it couldn't be proven that it existed - or that it didn't. As we've seen many times in newsgroups people with opinions are absolutely convinced that everyone who doesn't respond agrees with them. In fact, most people simply don't care.

At this point in time they're more concerned with watching their retirement nesteggs shrink to nothing. That's much more important to them than whether or not someone is voicetracking in Podunk.

Rich

Amateur Radio Newsline™ Report 1301 - July 19, 2002

Amateur Radio Newsline report number 1301 with a release date of Friday, July 19th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The United States takes the gold at W-R-T-C 2002 but ham radio growth in the U-S appears to be standing still. These stories are first on Amateur Radio Newsline report number 1301 coming your way right now.

(Billboard Cart Here)

**
RADIOSPORTS: N5TJ AND K1TO MAKE IT A THREE-PEAT

The Lakers did it in Los Angeles in basketball. Now the Radiosport team of Jeff Steinman, N5TJ, and Dan Street, K1TO have made it three in a row as they win the World Radiosports Team Championship games in Finland. Dave Bell, W6AQ, attended the games. He is just back and we asked him to describe the event:

--
Dave Bell W6AQ: “I got to go out with the camera and watch them in action. And I saw some of thje worlds best contesters and I realized how they win contests: Thst is, they stay focused totally on what it is that they are doing for 24 hours. And other than swap chairs with a co-pilot so that the co-pilot becomes the pilot, those guys are focusted totally on this contest. For me, it is a lesson on how to concentrate and, if you are really into it – how to win.”
--

N5TJ and K1TO operating as OJ3A fended off a very close challenge from Igor Booklan, RA3AUU, and Andrei Karpov, RV1AW, who claimed the silver. The Americans had a score of 1,626,900 to the Russians 1,620,760. A difference of only 6140 points. W6AQ says that regardless of the numbers, these operators are dedicated to the sport of radio:

--

Dave Bell W6AQ: “The two winners this year, Jeff Steinman, N5TJ, and Dan Street, K1TO, also won last year and they won the one before that. And it was not surprising to me, ehen I came to their shack and watched them operate.”

“When I showed up there, Dan Street was the second operator and he noticed me come in and he nodded. I brought the camera up and came right around in front of Jeff Steinman. I was basically between him and his co-pilot. In fact I was actually looking at his face and I am not sure to this day that he even knew I was there – so concentrated was on listening and talking.”

--

The German team made up of Frank Grossman, DL2CC, and Bernd Och, DL6FBL, finished third to claim the bronze with a score of 1,614,591. All of the scores are on the web at www.wrtc2002.org. No announcement yet as to the venue for the 2004 WRTC games. (ARNewsline ™)

**

HAM RADIO STATS: NO GROWTH

The numbers are in and the word is -- stagnant. That about sums up the growth in ham radio since the introduction of a restructured United States Amateur service April of 2000. Amateur Radio Newsline's Henry Feinberg, K2SSQ, takes a close look at the numbers and what they mean:

--
The numbers come from the interpreter of the numbers. And W5YI Report Editor Fred Maia in Dallas Texas says that growth in ham radio is at a standstill.

Maia has been right on the money in his predictions over the years, and he looks back at the past two years in his newsletter. And in it, Fred says that there are just about the same number of Amateur Radio operators under FCC license now as there were in the spring of 2000. That's when the service was restructured.

In April of 2000 there were 678,539 holders of Amateur licensees in the United States and its possessions. In June of 2002 the number was 680,342. Taking into account attrition from people not renewing for any number of reasons, that's a net gain of only 1803 new hams over the past two years. Not allot, but there is a good reason. Keep listening.

Maia breaks the numbers down by license class. In April of 2000 there were 50,077 holders of Novice tickets. In June 2002 there were only 39,930. A loss to the license class of 10,147 but not necessarily gone from ham radio. Why? The numbers for General and Extra kind of tell the story. General is up by 27,037 and Extra by 20,282 since restructuring. Chances are that most of the new holders of General class are probably the results of upgrades by Novices and Technician's wanting a wider range of high frequency operating privileges. This is born out by looking at the numbers for the Tech license which is also down by about the amount General and Extra are up.

So its really been two years of ham radio musical chairs and that was not unexpected. It takes time for as massive a change as the restructuring of 2000 to settle in. It will be the next set of numbers a year from now in 2003 that will really tell the story.

Are we up or are we down? In 12 months we should have the answer.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

The complete set of statistics can be found on pages 7 and 8 of the July 1st W5YI Report. (W5YI Report)

**

SPECTRUM: FCC PROPOSES ALLOCATION AND SERVICE RULES
FOR THE 71-76, 81-86, AND 92-95 GHZ BANDS

New rules may soon be on their way for a set of super high frequencies. David Black, KB4KCH has the details:

--

The FCC has proposed a Notice of Proposed Rule Making designed to promote commercial development and growth of the millimeter wave. This, in the spectrum in the 71-76, 81-86 and 92-95 GHz bands.

This millimeter wave band is also known as the Extremely High Frequency or E-H-F band. It refers to radio signals between 30 and 300 Gigahertz, where the wavelengths range between 1 and 10 millimeters. Research sponsored by the U.S. government has led to the verge of being able to use millimeter waves economically.

One advantage of using this frequency band is that the beams can be tightly collimated, easing channel sharing. Another important consideration is increased path loss due to oxygen and atmospheric absorption which can perhaps be viewed as a positive in terms of frequency reuse for wide dispersal applications such as high speed data transfer.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.

--

If enacted, the new rules will be under Parts 15 and 101 of the Commission's Rules. (FCC, CGC Communicator)

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7KSO repeater System serving all of Northwest Arizona.

(5 sec pause here)

**

HIGHER AMATEUR VANITY CALL SIGN FEE EFFECTIVE SEPTEMBER 9

The FCC has officially set $14.50 as the cost to apply for, renew or reinstate an Amateur Radio vanity call sign. According to the ARRL Letter, a Report and Order adopted July 3rd says that the new fee schedule will become effective for applications received on or after September 9th.

The current vanity fee is $12 for the 10-year license term. The FCC had proposed the new, higher fee in a Notice of Proposed Rulemaking released March 27th aimed at setting all Fiscal Year 2002 fees. Again, the new higher fee ineffective on September 9th. (ARRL, FCC)

**

ENFORCEMENT: FCC ACTS ON CALIFORNIA REPEATER INTERFERENCE ISSUE

A California ham appears to have decided to quit ham radio rather than fight allegations that he was the source of interference to a repeater. FCC Special Counsel for Amateur Radio Enforcement, Riley Hollingsworth, explains:

--
Riley Hollingsworth: Hollingsworth: “We opened an investigation of interference allegations against Steven Holt, KE6WSJ, of West Hills California. That matter involves interference to the WB6VBV repeater in Palmdale California. We have been contacted by Mr. Holt. He informed us that on the advice of his attorney, he was submitting his license for cancellation.” (RAIN, FCC)

--

ENFORCEMENT: FCC ACTS ON ANOTHER CALIFORNIA REPEATER INTERFERENCE ISSUE

But Holt is not the only individual involved in a California repeater related issue that the FCC is looking at. Another is Leobardo C. Coronado, KC6PXL, of Sun Valley California. Again, the FCC’s Riley Hollingsworth:

--
Hollingsworth: “Coronado is coordinated for operation on 145.120 Mhz but links to 224.160 Mhz on which there is a coordinated repeater receiving interference.”
--

Hollingsworth’s letter to Coronado said that the FCC had evidence that the repeater operator had taken no action to alleviate the problem even though he had been advised of the interference numerous times. The FCC gave Coronado 20 days from receipt of its letter to write back and advise the regulatory agency about the coordination status of his repeaters and what has been done regarding any complaints. (RAIN, FCC)

**

ENFORCEMENT: FCC QUESTIONS CALIFORNIA CLUB CALL SIGNS

And in yet another California matter, the FCC has requested that Long Beach resident Richard Crow, KB6IAT, justify a pair of club call signs for which he is listed as trustee. The calls are WB6FCC for an organization identified as the Richard Burton Amateur Radio Club and WB6JAM for a club called Jammers for Jesus.

The FCC gave Crow thirty days from the date of its June letter to provide justification as to the need for each of these call signs. He was also directed to furnish the Commission with a list of the names, addresses and telephone numbers of the members of the two clubs. Also, the meeting times and dates within the past year, proposed meeting times and locations within the coming year, and copies of minutes, if any, taken at meetings within the past three months for each club. Crow was told that the FCC would cancel the two call signs if he did not file a satisfactory response. (FCC)

**

EMERGING TECHNOLOGY: WORLDCOM AND UU-NET

Even if WorldComm files for bankruptcy it will have little effect on the way the Intrernet operates. This even though the troubled financially strapped telecommunications giant controls a big chunk of it. Jim Damron, N8TMW and Jeff Clark, K8JAC, have more:

--
WorldComm officials say that even if the company goes under, the Internet will keep running. This, after market analysts predict WorldComm will file for bankruptcy following a major accounting scandal.

The telecom giant handles half of the Internet's U-S traffic through a subsidiary known as U-U- Net. Newly elected WorldCom C-E-O John Sidgmore says that U-U-Net -- will keep going no matter what happens to the WorldCom parent corporation.

According to Sidgmore, U-U-Net handles more than 50 percent of U-S Internet traffic. This includes about 70 percent of all e-mails sent within the United States and half of e-mails sent in the world. Thousands of companies and agencies in more than 100 countries rely on WorldCom for Internet access, including the United States Department of Defense and the U-S Department of State.

--

The bottom line. The Internet and your e-mail are safe even if WorldComm goes away. (Published news reports)

**

SWAP MEETS: HAM LICENSE A MUST FOR SELLERS AT TRW SWAPMEET

The TRW Radio Club passes along a reminder notice that every seller at its famed monthly Swapmeet must show a copy of his or her valid Amateur Radio license in order to receive a seller's permit. This restriction is for sellers only. Those coming to browse or make purchases are not subject to this rule. The T-R-W swap-meet takes place monthly in the Los Angeles California area but draws buyers and sellers nationwide. (TRW-ARC Via e-Mail)

**

UPCOMING EVENTS: HAM RADIO AT THE SOAP BOX DERBY

Ham radio will be a part of the 65th running of the All-American Soap Box Derby. This, in Akron Ohio on Saturday July 27th. To commemorate the event, members of the Cayahoga Falls Amateur Radio Club will activate special events station W8D from 2000 to 2400 hours U-T-C from
July 22nd to the 26th. On the day of the race W8D will be on the air from 1200 to 2000 U-T-C. Look for this one on 7.275, 14.250, 21.275 and 28.340 MHz and Q-S-L to Post Office Box 14, Cayahoga Falls Ohio 44222. (Press release)

**

UPCOMING EVENTS: FORT TUTHILL HAMFEST

And finally one not in Ohio. How about Flagstaff Arizona the weekend of July 26th, 27th and 28th. That’s when the Fort Tuthill Hamfest and Arizona State ARRL convention takes place at Flagstaff Airport oat exit 337 on Arizona State Highway 17. Aside from the usual hamfest fare, the Fort Tuthill gathering has something very special to offer. The clean air of the Arizona mountains and a truly breathtaking majestic nighttime sky. And less we forget, there is the famed Fort Tuthill Saturday evening Barbecue that makes people want to come back for more.

And less we forget, there will also be a wedding taking place at this years Fort Tuthill Hamfest. The groom is James Pastorfield, KB7TBT. The bride is Laura Lindstrom, KD7KYO. They met during an emergency in which the local ham community was involved. Not a ham at the time, Laura was assigned to ride in Jame's vehicle. The wedding is scheduled for 5 PM, Saturday, July 27th. They hope to honeymoon at the Grand Canyon. You can see lots more at www.acra-az.org on the world wide web. (ACRA, ARNewsline™)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

POST-IT NOTES CAUSE PROBLEMS

Warning: The effect of Post-It Notes on archived material is devastating. According to the Scripps Institution of Oceanography Library in La Jolla California the glue on Post-It notes eventually hardens and leaves a film that becomes acidic. This results in eventual discoloration and brittleness of the paper. In fact, Post-Its left for more than a month or two on already brittle paper such as old books can cause the paper to tear when the notes are removed. (CGC Communicator)

**

HAM RADIO IN SPACE: LANCE BASS IN TRAINING FOR ISS VISIT

Will a teen heart-throb be the next tourist in space? Possibly as Russian space officials soften their previously tough line on the much-hyped plans for a commercial flight to the international space station this October by pop singer Lance Bass.

Bass has already undergone at least two medical examinations and is now doing a round of intensive training at Russian space facilities. Two weeks ago, the 23 year old member of the group N SYNC began training in Russia at the Star City Cosmonaut Center near Moscow. A few days later, Music Television News reported that as part of his training, Bass would be dropped into the Black Sea for an emergency-splashdown test. He was also to be left in a Russian forest without food and supplies. He must also become fluent in the Russian language,

spacecraft flight control systems and standard operations of the International Space Station as a pre-requisite to fly.

The decision by the Russian agency to explore the possibility of Bass' flight was based on the idea that the $20 million ride would have one or more corporate sponsors. So far there is no word as to whether or not Bass would be willing to get his ham license and operate the ham station on board the I-S-S. (Published reports)

**

INTERNATIONAL - CANADA: VE1QJ APPOINTED ASSISTANT DIRECTOR

Maurice Le Blanc, VE1QJ, has been appointed as an Assistant Director for Radio Amateurs of Canada’s Atlantic Region. Le Blanc lives in St. Basile, New Brunswick province and is retired from the Université de Moncton where he taught English as a second language. He is also fluent in French, English, Spanish and German and has been licensed as an amateur since 1950. (RAC)

**

INTERNATIONAL: UK CONTEST WINNERS ANNOUNCED

The UK results of the special Marconi Centenary Contest that took place in December last year have now been released. This was a 'one-off' event to commemorate the centenary of Marconi's first trans-Atlantic contact between Canada and Great Britain.

The overall U-K winner was Dave Cree, G3TBK, with a total of exactly 400 VE QSOs. The UK winner of the 100-watt section was GI0KVQ with 149 Canadian contacts, while G4ELZ made an excellent 110 VE QSO’s and took the QRP prize. (GB2RS)

**

HAM HELP NEEDED: QSL’S LOST AS LIGHTNING STRIKES

Back here in the U-S-A, Don Moss, NL7CO reports over the VHF Reflector that Scot Sharp, KD5OMJ, was away on vacation when his house was hit by lightening. Moss says that it appears as though it entered the house through the ham shack modem line.

As a result of the ensuing fire, KD5OMJ has lost all of his logs and QSL cards and he is asking hams who had a QSO with him, to please send him a new QSL. This, because without logs he is not able to determine who he has talked with. Both Sharp and Moss are residents of Lawton Oklahoma. (VHF Reflector)

**

DX

In D-X, word from Ron Moorefield, W8ILC, that he along with K8FL, K8LEE, N9NS, W8GEX and WA8NJR will be operating between 40 and 6 metres as C6AJR from Eleuthera, Bahamas, between the 24th and the 31st of July. Modes will be on SSB, CW and PSK31. The team will also be in the IOTA Contest operating as C6DX.

QSL is via N8QET. (W8ILC)

Also word that DL4FCH, will be active, as DL4FCH/P from Pellworm Island from the 20th of July to the 2nd of August. Operation will be mostly on CW, and will include the IOTA Contest. (RSGB)

And word that W2SGX has become a VUCC awards checker in the central New York area. Carl says over the VHF Reflector that he will be available to check cards for VUCC awards at the Fingerlakes Hamfest on Saturday August 3rd. The venue is the Tompkins County Airport in Ithaca, New York from 10:00 AM until 2:00 PM Eastern Daylight Time. (VHF Reflector)

SUPPORT FUND REPORT WITH ANDY JAREMA, N6TCQ

And finally this week, its time for another Support Fund report from Administrator Andy Jarema. This time N6TCQ is not asking for funds. Just some advice:

--

Hi. I'm Andy Jarema, N6TCQ, your Amateur Radio Newsline Support Fund Administrator.

For the past several months, a number of you have written to us -- asking why we are not using on-line payments for Amateur Radio Newsline donations? Well, we have given it a lot of thought. And each time, we end up asking ourselves the same question: does the price tag to establish and maintain this service justify the additional cost?

No matter whose services we use, there are set-up and monthly usage fees for the secure e-commerce web server. And our bank will charge us 3 to 5 percent for every credit card transaction they process.

The answer is simple. Supporters would have to donate enough using this method to break even. Only after that could your generosity be put to work.

So for the next several weeks we'll be asking for your input. Would you use your credit card on-line to support ARNewsline?

Send your answer to newsline@arnewsline.org. If you are reading the Internet version, just click on the link shown. mailto: newsline@arnewsline.org.

Type "YES" in the subject line if you would use this service. If not, type "NO." Feel free to make any comments in the body of the e-mail. We'll tally the results and report to you in a future Amateur Radio Newsline report.

Remember, Amateur Radio Newsline is a 501(c)(3) corporation. Your donations are tax-deductable and your support is always appreciated.

That's it for this week. I'm Andy Jarema, N6TCQ.

--

In case you missed those instructions you can find them in the print edition of this weeks Amateur Radio Newsline report. (ARNewsline™ Support Fund)

Source record: 10318

I believe I heard 2 of them, all around 1960-1962.

My guess is the time I heard the Canadian plains stations was in 1961. I recall both were a half hour each, as I tried to DX as many Canadians as possible in that time.

2258. NYC Activist Party to Support WBAI Film

Newsgroup: rec.radio.broadcasting
Date: 2002-07-24 03:14:27 UTC
From: Tony Geballe <geballe@mindspring.com>
Message-ID: <ahl62j$b5l$1@xuxa.iecc.com>
Source record: 10320

Activist Party of the Summer!

Come join WBAI producers, listeners, activists, people who fought for free-speech community radio in NYC and won!

Help raise money for the film "WBAI - Whose Station?" being made by award-winning filmmaker Elizabeth Bouiss ("No Time for Tears," her award-winning film about women who served in Viet Nam, was shown nationwide on PBS).

Wine and dine in a spacious summer garden at a beautiful brownstone on a tree-lined street in Brooklyn, enjoy live music, and view footage from the documentary-in-production.

We won back the station - now it's time to make the movie.

There is a suggested donation of $10. If you can't make the party but would like to help make the film, you can write tax-deductible checks for any amount to NYFA (The New York Foundation for the Arts) with the check memo written for "WBAI-Whose Station?", and send them to:

WBAI - Whose Station?
536 E 5th St., Ste. 3
NYC, NY 10009

For more information about the party or the film, call (212) 726-1220.

in article ahdcei$6nc$1@xuxa.iecc.com, gaffo wrote:

> No, I don't listen.......this past year I've listend to maybe 1-hours worth
> for all the "men" mentioned. That is what is so sad! I scaned to Becks rant
> three weeks ago, and literally within 45-seconds eh ass was promoting
> nucreal strikes againts several million civilians........

I didn't hear that because I don't listen AT ALL. What part of "don't
listen" do you not understand?

> Same with the others.......i've literally scaned to the shows for 1-2
> minutes total time investment by me over several months time.........and to
> hear this shit from such a short sample is very illuminating WRT to their
> character and value.

Why do you "scan the shows"? If it bothers you so much, stay away. What am I
missing here? I have managed to listen zero, none, nada, not one word of any
of the show about which you rail so plaintively. I'll share with you my
secrets if you like.

> I honour my judgment and don't listen to ths crap either.

That is complete nonsense. Either you listen or you don't. If you don't,
then what are we talking about here? How would you know how "horrible" it
all is? The fact is, you DO listen.

> I also honour
> others' judgement in general. I don't honour these shows in any way, shape
> nor form.............they really serve no good perpose. They do serve
> evil-hate-maliciousness. In simple terms they are vile (and yes this is my
> judgement on the matter).

Then WHY ARE YOU STILL LISTENING? Don't worry about what other people do.
They are grown up and can make their own decisions.

>> No, I wouldn't have such a show.
>
>
> Good! Me neither. And thankfully most folks out thier wouldn't
> either.......yet the minority assholes still get heard via radio-talk-rant,
> and good, noble radio lies in the grave of "idealism" I suppose. Sad that
> you defend such shows.....Whether you listen to them or not really isn't the
> issue, if you don't like them you really should condemn them as hateful.

I don't like a lot of things, but I don't set myself up as God and condemn
them for others. Each individual is capable of deciding for himself what he
wants. What is it about that concept that is so difficult for you to

understand?

> Well if they are a disgrace to humanity, then they are also a disgrace for
> radio.......are they not? BTW there are absolute "rights and
> wrongs".........moral relativism is not a moral concept - that way is
> anarchy. If your take moral relativism to the extreme and obsurd (ie.
> hitler) then you can justify any position and act as "well its ok for others
> to ("kill, rape, mame,etc...., but not me".............).

YOU are not the judge of "right and wrong". You can judge for yourself, but you cannot judge for others. Don't look now, but the concepts of "right and wrong" have shifted wildly over the years. A lot of things that used to be "right" are now "wrong"; a lot of things that used to be "wrong" are now "right". If I have to spoon-feed you examples, you are not thinking hard enough.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues,

hip-hop, country, rock, and just about everything else under the sun.
Instead of telling our DJs what to play, we allow them to select their
own recordings from our vast and unique library. It is their
responsibility to mix together many different kinds of music in an
intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

Remember reading a complaint, some years ago, by a station on 800 kHz,
I think it was in Minneapolis, about a station in Belize, operating on
assigned freq of 834 kHz causing an annoying heterodyne at certain
hours. Talk about distance!==T

The Official Old-Time Radio (OTR) FAQ
Frequently Asked Questions (FAQ) File
for OTR
(Old-Time Radio)

Last Modified: Thursday, July 25, 2002

---------------------------------------------------------------------
Copies of this FAQ are distributed quarterly to rec.answers,
rec.radio.info, rec.radio.broadcasting, rec.antiques.radio+phono and
other news groups; and are on file at bloom-picayune.mit.edu in the
file: /pub/usenet-by-group/news.answers/radio/old-time-faq. A recent
text version can usually be found at
http://www.old-time.com/ffiles/otr.faq The most recent HTML-ized
version is at http://www.old-time.com/otrfaq.html

---------------------------------------------------------------------
Table of contents:

Q01. What is "OTR"?
Q02. You haven't mentioned OTR music, why not?
Q03. Where can I buy recordings of old radio shows?
Q04. Which vendors have (lower prices) (higher quality) (faster
response)?
Q05. Are OTR shows rebroadcast? If so, where and when?
Q06. I remember a great show called (x). When was it aired?
Q07. Are there any books about OTR?
Q08. Does anybody trade tapes of OTR shows?
Q09. What's this stuff about Copyright?
Q10. How can I get my local radio or TV station to broadcast OTR
programming?
Q11. I have some old transcriptions and tapes, how can I make them
sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are
different. Why?
Q14. Is there anywhere I can get a complete listing of all the
episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the plots or
themes of OTR programs?
Q16. Is there a World Wide Web page (URL) I can access for more info?
```

Q17. Is there an email newsletter on OTR? How do I subscribe to it?
Q18. What ever happened to the person that played [insert character] on [insert name of show]?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to access your page?
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. Where can I buy 1970s CBS Radio Mystery Theater programs?
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?
Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?
Q42. Where can I find OTR to download?

Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age

radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html/

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

---

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station

rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

Just to get a little perspective in this
controversy, copyrights do expire. Under the old
copyright law, a copyright was good for 28 years
from the date of first publication, renewable for
another 28 years, for a total of 56. Under the 1976
act, those copyrights were extended to 75 years,
provided they were renewed. Copyrights under the new
law, which took effect on 1 January 1978, are good
for the life of the author plus 50 years. Copyrights
on anonymous works, works made for hire, etc. are
good for 75 years after first publication.

So, since otr has just barely been around for 75
years, little or none of it is in the public domain
yet by reason of having been around for a long time.
The question of what constitutes publication, and
the fact that sound recordings could not be
independently copyrighted until the new law took
effect add additional complications.

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

The days of radio being ruled by the artisans is over, and
for some time now it has been in the hands of people who
only look at the bottom line, so to reach them you must
talk through public radio pledges, or through sponsors

on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.

The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.

Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!

Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!

You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.unrelatedinventions.com/Audiotools/

From: hhoward@mindspring.com (Henry Howard)

For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog)

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

Also check Frank Passage's logs at the old-time WWW site; most contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational libraries with this material.

Q16. Is there a World Wide Web page (URL) that I can access for more information?

A16. Yes, there are several WWW sites. Each site contains different information, so you might want to visit them all. The major OTR WWW sites all have links or pointers to each other, so you can explore many topical areas within old time radio. Good places to start exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

An excellent database of OTR-related WWW sites, with an explanation of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. Several newsletters currently exist. Here his how to get the best:

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very popular and freely available electronic newsletter, delivered nightly. Its purpose is to foster general discussions about the hobby of collecting, preserving and listening to OTR. To subscribe, send an email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe
(The body of the message is ignored)

Q18. What ever happened to the person that played [insert character] on [insert name of show]?

A18. Check the "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the Where Are They Now pages at www.440int.com.

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in

the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

You can also call Harris/Allied used equipment division at 1-800-622-0022 or call Radio World magazine at 703-998-7600 for subscription information. Radio World is an industry trade and has used equipment listings in the classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: vintage@infohouse.com (Andy Blatt)

I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio. They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines. The address is 12611 Madison Avenue in Lakewood, Ohio 44107. The phone number (no answering machine, no fax machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..

It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)

On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.

The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.

There is no difference in audio quality using either six hour or two hour mode.

It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.

The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.

Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)

Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But

not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.

I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.

Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia, MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression seems to be more favored than is RealAudio(R) compression.

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request

to: Fred Korb, c/o Oldtime Radio Collectors and
Traders Society, 725 Cardigan Court, Naperville,
Illinois 60565-1202. I am willing to help you preserve
the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a
lubricating film can be automatically applied to the tape as it is
played. I tried it. Although temporary, it does indeed work! I'd
recommend it for those squeaky tapes that you wish to re-record onto
newer reels.]

Richard Fish (lodeston@bluemarble.net) also left this helpful info
about an alternative method:

HYRDROLYZATION is the culprit. The tape material -- the
backing, or the binder compound used to stick the magnetic
particles to the plastic backing -- has absorbed water
from the air. The water molecules actually make the tape
expand a bit, so it doesn't fit the machined tape-guides
properly anymore; and they can interfere with the
lubrication impregnated into the tape; and it is theorized
they can even interfere with the polished smoothness of
the tape surface.

WHY SOME TAPES AND NOT OTHERS? It depends on the
formulation of the plastic backing and binder. In the
mid-70s, both 3M (Scotch) and Ampex, the two major tape
manufacturers, started experimenting with their formulas.
They thought they were introducing major improvements,
but instead created a tape much more prone to
hydrolization than anything had ever been. The problem
did not show up for years, and the formulas did not get
corrected until sometime in the mid-'80s. Theoretically
any tape could get hydrolyzed over a long period of time,
especially if stored in a high-humidity situation, but in
practice most squeaky tapes were made (roughly speaking)
between 1975 and 1985.

WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and
entreprenurially successful producer of radio drama in
the US today) gave me his formula and I've done it many
times now and it works:

Bake the tapes in a convection oven for 8 hours at 130
degrees Fahrenheit. It is entirely possible to bake a
tape twice if the first time doesn't do the trick. You
get about a three-week "window", sez Tom, before the tape
starts to re-absorb water. So the best deal is to bake
the tape and immediately make a copy. But if you forget
to do it and it re-hydrolyzes, you can bake it again.

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono news group, created by Bill Robie. A pointer to his FAQ may also be found at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) - Focuses on radios, phonos, and related materials made before the 60s - Avoids "ham" radio gear (the Boat Anchors group covers that) - Has a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through the old-time WWW site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware resources may also be found at http://www.old-time.com

---

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes (dan@soltec.net) left this note:

Several years ago one of the electronic magazines ran
plans with dimensions and number of turns, etc to build
one of these antennas. I have built several and I'm no
mechanic. If you (or anyone else reading this) would
like a copy of the article and plans, visit my website
at http://members.soltec.net/~dan

If you are interested in AM Broadcast Band reception, and technical articles related thereto, send a SASE to the following address for their product catalog:

National Radio Club
Publications Center
PO Box 164

Mannsville, NY 13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you. Here is a list of some of the WWW pages for radio drama (more may be found at http://www.old-time.com):

Atlanta Radio Theatre Company: www.artc.org
ZBS Media http://www.zbs.org/zbs.html
LodesTone Productions
http://www.bluemarble.net/lodeston/lode.html
Midwest Radio Theatre Workshop http://www.mrtw.org/mrtw

Q24. I have only email access to the Net. Can I still get the files at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail servers.
To get the latest edition, send e-mail to one of the addresses below.

To: mail-server@rtfm.mit.edu (for US, Canada & South America)
Enter only this line in the BODY of the note:
send usenet/news.answers/internet-services/access-via-email

To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
Enter only this line in the BODY of the note:
send lis-iis e-access-inet.txt

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at MIT, and is available from the MIT mailserver. For more info on how to get files by email from MIT, send a message

TO: mail-server@rtfm.mit.edu
SUBJECT: [blank]
BODY:
help
end

I have also initiated a simplistic file server. At present, it can handle only a few files. If you have ONLY email access to the

Internet, and want more information on what is available by email, send an email in EXACTLY this format:

To: files@old-time.com
Subject: send help.otr

do NOT put anything in the body of the message (it won't be read)

Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect to any of the WWW sites mentioned above, and follow the pointers to their audio clips and / or soundbytes. Many of the soundbytes can be downloaded, and played on your computer's sound card, others will play "realtime" through your multimedia system. There is also a news group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR shows (news groups are notoriously inefficient at transferring large binary files, however).

You can select from many moderate-length soundbytes at Jerry Haendiges' Preview Listening Lounge at www.otrsite.com/ra/preview.html
---

Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about everything from "underbed cardboard storage boxes" to old soft drink cases. If you want your collection to have a more "professional" look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

You almost need to buy cassette albums from specialty suppliers. Radio Shack used to carry a small line of these and charged too much. We are in the recording studio business, and receive catalogs from several sources. The one I like best has some of the lowest prices and unhesitatingly deals with individuals and will take your credit card number over the phone for instant shipment (in contrast to some who require account setup, purchase orders, prepayment, cash and other nuisances).

They have two catalogs: one for audio and one for video. Cassette albums are available in a large number of different styles, sizes and capacities. The 8-cassette albums I use are CPCN.4+4M/WHT in white and CPCN.4+4M/RBLU in royal blue. Outside dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit well on a bookshelf. This model also seems to cost less per cassette than any of the other models,

though logic might lead you to the conclusion that
the larger capacity ones would cost less.
[Polyline has a website at www.polylinecorp.com, and their new
address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

Q27. All this new software is a bit difficult for me to use, as I am
blind. Can you give me any assistance on how to read your page?

A27. Yes. Although my WWW page is best viewed with Netscape or
Microsoft Explorer, most pages render well with LYNX and associated
reader software.

Blind visitors who depend on DOS-based software to access the net, or
who use a reading program to audibly display their computer's output
might be interested in a program called "Nettamer". The Nettamer home
page is at www.nettamer.net/

Q28. I am interested in re-creating some OTR drama. Where can I get
scripts?

A28. Check your local or national OTR clubs. Many have a "print
library" that includes scripts. You can also point your browser at
the University of Maryland's script page, at
www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

One excellent source is the book. "One Hundred Non-Royalty
Radio Plays" compiled by William Kozlenko, Greenberg Publ of
NYC 1941. It's certainly out of print now, but many libraries
would have a copy. I bought mine at a used book store a few
years ago. The 100 radio plays in the book include adventure,
mystery, fantasy, comedy and historical. Most were originally
produced on educational stations in the 30s. Authors include
Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages
dedicated to on-line OTR scripts at http://www.genericradio.com
---

Q29. I can hear what sounds like another program playing in the
background on many of my OTR tapes. Is this due to the tuning on the
old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems
can be caused by one or more of the tape recorders used before you
received your copy of the program. Print-through has already been
mentioned in Q & A 19. Bob Burnham has a nice explanation of two more

problems: crosstalk and channel leakage.

Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.

When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.

Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads. It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or mis-aligned erase head. You usually will hear another program playing IN REVERSE in the background.

HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...

If duplicating quarter track reels, copy ONE channel or track at a time. As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.

Sorry, there is NOTHING you can do to remove these flaws once they are there.

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please get software and instructions from your favorite Internet Service Provider or shareware/freeware software site, or connect to www.old-time.com/irc.html for basic instructions.

Q31. I'm looking for copies of old "CBS Mystery Theatre" radio programs, primarily from the 1970s era. Does anyone know where I can call or write to obtain such items? I'd like to purchase a complete set if possible.

A31. Jack French (OTRpiano@erols.com) left the following information:

You most certainly do not want a complete set of this series, because you couldn't afford it. There were 2,970 shows aired so even if you could find them for a buck an episode, you'd have to cough up three Gs. The series ran from 1-6-74 to 12-31-82 and since it came so late in radio history, every episode was recorded by somebody. All episodes are still copyrighted, and CBS enforces their copyrights. Therefore no dealer is going to list them, and collectors are reluctant to sell or rent them. Your only hope is to find some way to get copies in a fashion not in violation of copyright law.

Editor's note: By my count, there were about 1400 different CBSRMT shows. The rest may be duplicates.

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.groups.google.com to sample some of the messages.

Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call "OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it.

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:
* Annual OTR and Nostalgia Convention in Cincinnati, OH (April)
* Radio Classics Live, Brockton MA (May)

* Annual Lum and Abner Society Convention (June)
* REPS Radio Showcase (June)
* Friends of Old-Time Radio (October)
* SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at http://www.lofcom.com/nostalgia/phorums/

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material. Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.

Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day, Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin

Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at:
http://www.homestead.com/repsonline/index.html

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

---

Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

A41. The Library of Congress (LOC) does indeed store copies of many old-time radio shows. Any qualified person can access this material, or even get copies. There are, however, some restrictions on its use. Elizabeth McLeod (lizmcl@midcoast.com), who has done much research in the area, gives us this information:

LOC material may be listened to at no charge at the Library's Recorded Sound Reference Center by "qualified researchers" working on a project intended for public distribution -- from a full length book to an article for your local OTR newsletter. You cannot, however, make copies of the material due to the contractural and copyright restrictions which the Library is required by law to observe. (While the LOC preserves and houses the material, it doesn't own it.)

It is possible, though, to obtain copies of the material from the LOC by going thru a process which is neither fast nor inexpensive. But if you have the patience and are willing to spend the money for material you can't get any other way, here is what you do:

1. Locate the specific item in the LOC's SONIC database, accessible from the Recorded Sound Reference Center Homepage, http://lcweb.loc.gov/rr/record/

2. Make note of the LOC Call Number and description of the item you need.

3. Phone, fax, or email the Recorded Sound Reference Center with the items you are requesting -- contact information is available on site. The Reference Librarian who handles these things is Brian Cornell.

4. The Library staff will determine what legal permissions will be required in order to copy the items you want, and will contact you with the names and addresses of the people who must be approached in order to get these clearances. If the item is from the NBC Collection, you will need to clear rights with their Intellectual Property Department in New York. Additional clearances may be required if the program is under a separate copyright.

5. You must write to the people specified and ask permission to have a copy made. It's a good idea to specify why you need the copy -- and don't just say "because Joe Blow is my favorite radio comedian." If you don't have a professional-sounding reason, make one up.

6. Wait to hear back from the Legal Entities. If you've written to NBC Intellectual Property, you will get a letter back from them in about four weeks. Two copies of a legal contract will be enclosed, specifying what you may and may not do with the recording. Sign both copies, and send one of them back to NBC.

7. NBC will advise the LOC that it has granted permission, and in about three weeks you will get back a requisition form from the Library's Phonoduplication Lab. You'll need to check it over, sign where specified, and send one copy back to them with your check for the lab fee -- which starts at $86 per hour, not including the cost of tape stock. Then, fax the other copy of

the form, and a photocopy of your check to the lab, and they'll begin processing your duplication request. (Yes, the fee is outrageous -- but there are worse places to spend your money than with the entity which has done more for the physical preservation of broadcasting history than any other organization in the United States....)

8. In about four weeks, FedEx will deliver your tape. Needless to say, you may not make any commercial use of the recording in whole or in part -- and you had to sign a contract to that effect in order to get access to it. Commercial permissions are a whole separate case.

Like I said, this is not for everyone -- but if you're working on a serious project, it can be a valuable resource for getting access to material that simply isn't available anywhere else and which is unlikely ever to be released on the commercial market.

Elizabeth

Q42. Where can I find OTR to download?

A42. The number and location of FTP sites that provide OTR changes more rapidly than does this FAQ. Your best bet is to check the backissues of the various alt.binaries.sound(s).radio.oldtime groups on USENET. Hint: point your browser to www.groups.google.com and try your search from there

---

NOTE: URLs mentioned in this FAQ may have changed. For the latest information, point your browser to www.old-time.com, or join one of the internet mailgroups mentioned above. Email addresses listed here may have changed as well.

Re the interference in Mpls, OOPS! the station was WCCO on 830 kHz and
the heterdyne from Belize was at 4kHz

Well, aren't we being bourgeois? Why isn't this party being held in
Bedford-Stuyvesant? And why aren't street gangs being invited? In
fact, for all of the claims of "diversity," I'll bet you'll be able to
count on one hand the number of minorities and oppressed at this event
and lose track at the number of 60-year-old white college professors.

Can you say hypocrites?

Musta been WCCO on 830 kHz. But I'm sure the FCC had a good chuckle
about it, since Belize is well beyond WCCO's protected contour, not to
mention well outside the USA and thus the FCC's authority.

When is WBAI going to be about something other than itself? I used to enjoy listening to them years ago when I lived in NYC, but all these reports about the infighting and backbiting
are indeed depressing. Surely they can do something better with the frequency than these stupid us-against-them confrontations.

2269. NY Radio....how appropriate is this?(CC's WAXQ)

Newsgroup: rec.radio.broadcasting
Date: 2002-07-28 18:47:47 UTC
From: in_the_web_that_is_my_own@yahoo.com
Message-ID: <ai1e8jrhe1@xuxa.iecc.com>
Source record: 10331

On Clear Channel's NYC Classic Rock Station WAXQ, they have essentially taken Bob Buchmann off of Leslie Gold's radio show and given him a 2 hour "mercy shift" and been told to keep to being PD.

Buchmann has put out a commercial that to me could have been done with more truth and tact. This is NOT word for word but he says

"My ratings have been so high that I have been promoted to PD with a multi year contract and I am now going to be on 2-4pm!"

New Yorkers are NOT THAT DUMB. They know he was already PD, and does the audience REALLY CARE about his "multi year contract"?

Buchmann has also done a few things that make me question how professional he is. He has been plugging his "Radio Grill" a pub type place he and his wife. He has Q104.3 appearences, live broadcasts and events there and gets DOUBLE the pay. He has hired his buddies and gone so far as to fire and slice off a few hours off of shift to fit in his buddies who he says "need a little help". He fired a DAN NEER, a legend in NYC classic rock and is getting ready to fire Scott Muni (Classic Rock Guru and NYC ALL STAR DJ from the 77 WABC and WMCA Good Guy days) in the fall, so that he can lengthen his shift.

Is Buchmann GOOD enough and PROFESSIONAL ENOUGH to be in Market #1? Should he be plugging his personal business on the air and using it for station broadcasts and events and being PAID by his radio station to do this? I though that was illegal, perhaps it is JUST in bad taste.

I think that Buchmann should start working on EXPANDING THE PLAY LIST and stop focusing on HIS OWN accomplishments because he is making that station unable to listen to!!!!

But the interference was being heard *within* that contour, was it not? Anyway, if Belize was an ITU signatory they should have had their AM stations on multiples of 10 kHz -- that's the standard for all of the Americas.

Amateur Radio Newsline™ Report 1302 July 26th, 2002

Amateur Radio Newsline report number 1302 with a release date of
Friday, July 26th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A giant solar flare causes problems on the High Frequency bands and a popular ARRL Director calls it quits. These stories are first on Amateur Radio Newsline report number 1302 coming your way right now.

(Billboard Cart Here)

**

PROPAGATION: X CLASS SOLAR FLARE CLOSES HF BANDS

If you have been wondering where all the signals you normally hear on the High Frequency bands have gone, we have the answer. A large flare on the Sun effectively closed them down. Amateur Radio Newsline's Don Wilbanks tells us about the solar eruption and what it could mean for ham radio:

--

Solar flares come in all sizes, and the Astro Alert service says the latest ones are some of the largest. The E-newsletter says that the sunspot complex believed to be responsible for a July 21st X Class flare rotated fully into Earth's view on July 22nd. It announced its arrival by spawning a second and spectacularly powerful X Class 4.8 level eruption.

Solar Alert says that this latest flaring region has the potential to produce substantial effects on Earth over the next two weeks and we could see more than we have in the last 10 years. It all depends on whether or not the sunspot complex continues to pump out activity at the same rate that it is presumed to have produced over the last several days.

For radio hobbyists it means that there could be very little to hear on the bands from 1.8 to 30 MHz for a while. And, depending on the level of atmospheric ionization that takes place, it also could bring some unexpected long distance communications to 6 meters and above. If you have weak signal gear for the world above 50 MHz, keep and ear on frequencies like 50.110 and 50.125 MHz and be prepared to hear -- and to work -- the unexpected.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, in New Orleans.

--

More on this story is in the Solar Alert URL at
http://www.spacew.com/astroalert.html. (WDX6AA)

**

HAM RADIO POLITICS: ARRL BOARD MEETS IN CONNECTICUT

The American Radio Relay League has held its 2nd meeting of 2002. It took place July 19th to the 20th in Windsor, Connecticut. Amateur Radio Newsline’s Cathy Anno, KB0FDU, has the details:

--
Perhaps the biggest news came as the Board Meeting was getting ready to begin. Thats when the American Radio Relay League was named to receive a $181,900 homeland security grant from the U-S government to train Amateur Radio operators in emergency communication. The A-R-R-L was among several dozen nonprofit organizations designated to receive upward of $10.3 million in federal money to boost homeland defense volunteer programs. The grant, from the Corporation for National and Community Service Special Volunteer program, will provide free ARRL Amateur Radio Emergency Communications Course training to 5200 volunteers nationwide, starting in 2003.

According to the ARRL South-Eastern Division E-letter, one issue that garnered a lot of conversation was the plan to remove the Section News columns in QST to the ARRL web-site. This proposal was presented last January but a decision was deferred for six months. Now the Leagues Directors, by a 9-6 vote, decided to approve the change.

Starting with the January 2003 issue of QST, columns from the 71 Section Managers will be moved to the web-site. ARRL staff will make provisions for those without web access, to have access to their own Section Managers column. The Board also voted to move the contest line scores out of QST and post them on the web as well.

ARRL's Development Director Mary Hobart, N1MMH, presented a new creative method of increasing member awareness. Soon, ARRL members will be asked to participate in a premium membership program. Various levels of membership will be created, like Diamond Club and Maxim Society. The higher level of participation the better the premium benefit received. Details on this program will be announced soon.

The board named Sherri Brower, W4STB, Vero Beach, Florida, as winner of the McGan Memorial Silver Antennas Award for Public Relations. Bower, who becomes Section Manager of South Florida on October 1st, was cited for her long-term commitment and dedication to present all aspects of amateur radio to the public. ARRL South Eastern Division Director Frank Butler, W4RH, will present the award to Bower at the Melbourne Hamfest in Melbourne Florida on September 14.

For the Amateur Radio Newsline, I’m Cathy Anno, KB0FDU.

HAM RADIO POLITICS: WB8BGY RESIGNS AS GREAT LAKES ARRL DIRECTOR

And a big surprise happened Saturday July 20th during the ARRL Board of Directors meeting on. That’s where Great Lakes Division Director George Race, WB8BGY, of Albion, Michigan, unexpectedly tendered his resignation. Amateur Radio Newsline’s Fred Vobbe, W8HDU reports:

--

George Race, WB8BGY, who is 66, has served on the ARRL Board of Directors for 12 years. Prior to that, he held numerous other field organization positions including several terms as Michigan Section Manager. Race is legendary within the ARRL field organization for his travels around the Great Lakes Division. Each year he has spenr btween 45,000 to 50,000 on the road on the League's behalf and has literally worn out three cars in the process.

Race admits that a Board vote to move ''Section News'' from QST magazine to the World Wide Web did play a small part in his decision to resign, it was not the primary factor. Rather it was time. Time to devote to his wife and family. WB8BGY sayd that there is life beyond the League.

Accolades for Race were quick in coming. One of the first was from ARRL President Emiritus George Wilson, W4OYI. He told Amateur Radio Newsline that George Race devoted decades to furthering the cause of both ham radio and the League. Wilson called Race a tireless worker on behalf of the hobby adding that he definately will be missed.

Reporting from the ARRL’s Great Lakes Division, I’m Fred Vobbe, W8HDU.

--

By normal succession of officers, Great Lakes Vice Director Gary Johnston, KI4LA, was declared the new director. ARRL President Jim Haynie, W5JBP, has appointed Michigan Section Manager Dick Mondro, W8FQT, to be the new Great Lakes Vice Director. A successor to Mondro as Michigan Section Manager is expected to be named soon. (Adapted from ARRL Bulletin, W4OYI)

RADIO LAW: CQ SAYS YES TO NEW HAM BANDS

The publisher of several hobby radio magazines is urging the FCCto proceed in the creation of several new ham bands. However, it is voicing significant concern that the regulatory agency appears to be placing the interests of unlicensed services on a par with, if not ahead of, those of licensed services. Amateur Radio Newsline’s David Black, KB4KCH, tellks us who filed and why:

--

Most magazine publishers traditionally stay out ham radio politics. But the people who publish CQ Amateur Radio, CQ VHF and Popular Communications magazines are making an exception this time.

The publishers have filed comments with the FCC strongly supporting proposals that would create two new amateur bands and elevate a current amateur allocation from secondary to primary status.

CQ wants the FCC to adopt a proposal to create a "splinter band" at 135.7 to 137.8 kHz -- this would give amateur radio its first allocation above 200 meters in nearly a century. The company proposes opening the band to all amateurs with General Class or higher licenses, not imposing mode restrictions and making technical requirements flexible enough to encourage a wide range of experimentation.

CQ is also pushing for creation of a new ham band at 60 meters from 5.250 to 5.400 Mhz. The proposal suggests that full amateur power be permitted; that there be no sub-banding, either by mode or by license class; and that the band be open to all amateurs with HF privileges. That would include CW privileges for hams holding Novice Class licenses or Technician licenses with code credit.

Finally, CQ voices strong support for the FCC's proposal to make the Amateur Service primary on 2400 to 2402 MHz. The publishers say they're very concerned about one Commission request in its Notice of Proposed Rule Making. That requests solicits comments on the change in status that might affect non-licensed users of this band, such as cordless telephones and wireless computer networks.
